RF COAXIAL CONNECTORS

AMPHENOL
THE BUNKER-RAMO CORPORATION

Series UHF

Series UHF are low-cost, general purpose connectors for use in a wide variety of lower frequency applications (up to 300 mc) where constant impedance is not necessarily required. Available in small and large body sizes, they have a peak voltage rating of 500 volts.

While most UHF connectors have conventional solder-type cable affixment, Quick-Crimp UHF feature Amphenol's patented hex crimp design which permits faster, easier and more reliable assembly.

The 83-850 and 83-851 plugs eliminate one or both of two common soldering operations in assembly. The 83-850 has completely solderless braid and contact assembly; the 83-851 has solderless braid assembly.

CHARACTERISTICS

ELECTRICAL: Impedance: non-constant. **Frequency range:** 0-300 MHz. **Voltage rating:** 500v. peak.

ENVIRONMENTAL: Thermal limits: Teflon: —67°F to 390°F; Rexolite and polystyrene: —67°F to 185°F; mica-filled Bakelite: —67°F to 300°F. **Non-weatherproof,** except as noted.

MECHANICAL: Mating: 5/8-24 thrd. coupling (small body), 1-20 thrd. coupling (large body). **Cable affixment:** braid solder, Quick Crimp or Solderless.

MATERIAL: Contacts: male: brass; female: beryllium copper. **Bodies:** die cast zinc or brass. **Plating:** .0002" silver min. **Insulators:** Teflon, Rexolite, polystyrene or mica-filled Bakelite.

OTHER DATA: small and large body types do not intermate. UHF connectors ordered will be small size body unless large is specified.

SOCKET SOLUTIONS ...PLUS!

BARNES has the largest selection of sockets for I.C., MSI, LSI and Transistors in the industry... PLUS the world's most complete line of carriers / contactors and breadboards!

DIP SOCKETS . . .
For testing, aging, burn-in and breadboarding. Features easy loading, long, reliable life with no lead deformation.

DIP CARRIERS/CONTACTORS . . .
For device protection during shipment, testing and manual or automatic handling. Provides uniform geometry and polarization protection for all package sizes and types.

DIP PRODUCTION SOCKETS . . .
For high density production mounting of I.C.'s. Features low body profile, available in wire-wrap or solder tab terminals, temperatures to 150°C.

FLAT PACK SOCKETS . . .
For testing, aging, burn-in, breadboarding and production mounting. Features fast, one-hand loading and unloading, and positive lead separation with no deformation.

FLAT PACK CARRIERS/CONTACTORS . . .
For device protection during shipment, testing and manual or automatic handling. Provides uniform geometry and polarization protection for all package sizes and types.

BREADBOARDS . . .
For high temperature circuit design, environmental testing, aging and burn-in for Dual-in-Line, Flat Pack and TO style I.C. packages. Available with 5 to 75 device positions per board with card receptacle edge connector.

TO SOCKETS, CARRIERS/CONTACTORS . .
For testing, aging, burn-in and breadboard g . . . and for device protection during shipme , testing and handling for all sizes and pin c figurations.

TRANSISTOR SOCKETS . . .
For testing, aging, burn-in, breadboarding a production mounting. Features easy insertio excellent electrical characteristics and low profi for high density production mounting, as well wide temperature range capability.

For more information about socket sol tions plus the world's most complete line carriers, contactors and breadboards, writ for a comprehensive BARNES catalog.

Part numbers shown above (partial listing only) are suitable for most connector applications. All are available for fast delivery from Bendix stock. Bendix provides *one source* for all your RF connector requirements, including custom engineering and special finishes. Call or write for complete Catalog: Microwave Devices Division, The Bendix Corporation, Hurricane Road, Franklin, Indiana 46131. Phone (317) 736-6136.

Bendix Electronics

4 most sought-after terminal block features:

Snap-fit sections...
no unused circuits.

Variety of contact types.

No hidden contacts or
marking areas.

Direct or Channel
mounting.

Only BUCHANAN has them all!

Only Buchanan gives you the 4 most sought-after features in its terminal blocks—features that put more profit in your designs.

Assembly is fast because blocks are packaged in preassembled snap-fit sections. Clearly visible marking areas and contacts make wiring and marking fast and simple. Four different contact types meet the requirements of any application. You even have a choice of flat base or dovetail base. Bonus: New BUCHANAN® nylon and polypropylene blocks are designed to allow more circuits per foot than comparable competitive blocks.

To get all the profit-building facts, write today for new catalog. 1065 Floral Avenue, Union, New Jersey 07083 • (201) 289-8200 Telex 13-8214

BUCHANAN

Headquarters for universal crimping tools

Step-adjustable crimp tool

Dial seven pre-determined crimp depths with eight indent, cycle-controlled tool. Direct reading indicator.

Crimps MS pin and socket contacts sizes 12, 16, 20 and 22 to wire sizes #12 thru #26 AWG with or without turret head assemblies as shown on MS3191. **MS3191-4. LISTED UNDER QPL MIL-T-22520 CLASS I.**

Infinitely adjustable crimp tool also available. Eight indent, cycle-controlled tool crimps depths from .025" to .075". Direct reading indicator. Crimps contacts #12 and smaller. Meets performance requirements of MIL-T-22520.

Miniature Step-adjustable crimp tool

Dial eight predetermined crimp depths from .015" thru .043". Crimps micro-miniature contacts #20 and smaller to wire sizes #20 AWG and smaller with or without positioners. Selection of MS positioners available. Eight indent, cycle-controlled tool. **MS3198-1. LISTED UNDER QPL MIL-T-22520 CLASS I.**

Miniature infinitely adjustable tool also available for contacts #20 and smaller. Crimps depth values from .015" thru .043". Meets performance requirements of MIL-T-22520.

Manual Feed Tool

Pneumatic; cycle-controlled; portable or bench mounted with foot pedal. Crimps contacts #8 thru #22. Weighs less than 5 lbs. **LISTED UNDER QPL MIL-T-22520 CLASS II.**

C-Frame Tools

Lighter, easier to operate, compact yet strong. In-line die system; cycle controlled.

CT Tools. Crimp MS 25036 terminal lugs, MS 25181 splices and other fittings. Dial for size selector knob.

CTS Standard size, Cat. #11545, for fittings 12-10 thru 26-24. Meets performance requirements of MIL-T-22910.

CTM Miniature, Cat. #11707, for sizes 16-14 thru 26-24. **MS90413-1 (AS). LISTED UNDER QPL MIL-T-22910 CLASS I.**

•

CH Tools. Hex dies for use on RF connectors and shielded terminating ferrules.

CHS Standard Size. Pop-in die. **M22910/7-1. LISTED UNDER QPL MIL-T-22910 CLASS I.**

CHM Miniature. Fixed die. **MS 90487. LISTED UNDER QPL MIL-T-22910 CLASS I.**

CHM pop-in die also available. Meets performance requirements of MIL-T-22910.

•

CD Tools. Special dies for special custom applications. Standard size (CDS) and miniature size (CDM). C-frame or closed frame models.

Positioner controlled crimp tool

MIL standard 4-indent, cycle-controlled tool crimps most proprietary and mil spec contacts #12 thru #22. **MS 3191-A. LISTED UNDER QPL MIL-T-22520 CLASS I.**

Miniature positioner controlled tool also available. Crimps most contacts #20 and smaller. Ideal for confined areas. 6¾" long; 10 ounces.

Automatic Feed Tool

Four-indent tool automatically feeds contacts from disposable carriers (protects contacts from damage). Crimps as fast as operator inserts wires. Bench unit holds 2,000 or more contacts. For portable application, carriers in self-positioning, "see-thru" magazines hold up to 102 contacts. Crimps contacts #12 thru #22. **LISTED UNDER QPL MIL-T-22520 CLASS II.**

NEW! AUTO/FEED Crimping System

VIBRAPAK™ inserts hold up to 4000 pin and socket contacts. Can be loaded, labeled, sealed, and delivered to you by any contact manufacturer you choose. Provides you with a built-in positive lot control and contact identification system. BUCHANAN® AUTO/FEED system crimps contact sizes 16 thru 22. Accommodates most contacts covered by MIL-C39029, MIL-C23216, MIL-C26636. Meets performance requirements of MIL-T-22520.

PRINTED CIRCUIT EDGE CONNECTORS

PRECISION MILITARY AND COMMERCIAL PRINTED CIRCUIT BOARD EDGE CONNECTORS

These Cinch printed circuit connectors are designed for minimum printed circuit card wear, low insertion force and positive contact with the printed circuit board. Insulation is glass-filled diallyl phthalate, type SDG-F per MIL-M-14. Contacts are of phosphor bronze with a minimum of 30 micro-inches thickness gold plate. Units with solder tab or dip solder terminations utilize bifurcated contacts permitting two flexing surfaces instead of one for positive contact. Bifurcated contacts are especially recommended for added contact reliability where vibration or printed circuit board irregularities would otherwise cause trouble. Types meeting Military Specification MIL-C-21097B are also available as indicated. These connectors have beryllium copper contacts with 50 micro-inches gold finish.

D-SUBMINIATURE CONNECTORS†

The Cinch D Subminiature Connectors are designed for applications where space and weight are prime considerations. These high contact density connectors are especially well-suited for aircraft, missile and ground support installations. Although designed essentially for rack-and-panel installations, D series connectors may be adapted for cable attachment by means of accessory junction shells with integral clamps.

In addition to the original D series with two-piece insulators, Cinch offers Golden D and MARK III ROYAL D connectors utilizing monobloc insulators. The Golden D connector is available with either crimp-type, snap-in, removable contacts or standard solder pot contacts. MARK III ROYAL D connectors have the "Little Caesar" rear release contact assembly. Contacts are inserted by hand and extracted at the rear of the connector with a simple plastic tool. The "Little Caesar" contact assembly was selected by the National Aerospace Standards Committee for vital programs demanding great operational reliability.

All D Subminiature connectors will inter-mate if insert arrangements correspo These connectors are designed to meet or exceed most of the requirements MIL-C-8384 Rev. B.

Combination layouts are supplied with unfilled coaxial and/or HV contact caviti Coaxial and HV contacts must be ordered separately, and may be used int changeably in any of the layouts listed. HV contacts accommodate wire sizes to #20. Coaxial contacts (with crimp or solder type terminations) and HV conta are snap-in and removable. Solder type coaxial and HV contacts have captivat center contacts.

Royal D, Mark III and Golden D, Mark II contacts use crimp tool MS-3191 Extraction tool 599-11-11-150 is used with each Royal D, Mark III commerc connectors; insertion-extraction tool 599-11-11-165 is used with each milit connector.

For detailed test data and technical information see Cinch Catalog CM-46.

TYPE	DESCRIPTION	COMMON NAME	INSULATOR TYPE	CONTACT TERMINATION
D*MA	D connectors for the most critical applications. Monobloc insulators and "Little Caesar" contact assemblies Military version meets MIL-C-24308.	Mark III ROYAL D	Monobloc diallyl, thalate, GD-1-30F	Crimp insert by hand, remove with small tool.
D*M	D connectors with monobloc insulator for more critical application requirements.	Golden D, Mark I	Monobloc, diallyl phthalate, SDG	Solder pot Solder pot with coaxial
		Golden D, Mark I Combination	Monobloc, diallyl phthalate, SDG	and/or HV
D*SM	D connectors with crimp, snap-in contacts in monobloc insulators for quick assembly in more critical applications.	Golden D, Mark II	Monobloc, diallyl phthalate, MDG	Crimp, snap-in removable
D*	Original D connectors with two-piece insulators.	Original D	Two-piece, zytel	Solder pot

PERFORMANCE DATA

VOLTAGE RATING: 1250 VAC test, 1700 flashover; CURRENT RATING: 5 Amperes; INSULATION RESISTANCE: Greater than 5,000 megohms, determined in accordance with MIL-STD-202A, Method 302; CONTACT VOLTAGE DROP: (#20 contacts) 2.67 millivolts maximum per amp when tested in accordance with MIL-C-8384B, Paragraph 4.6.4; INDIVIDUAL CONTACT SEPARATION FORCE: 1 to 8 ounces; CONTACT RETENTION FORCE: 10 lbs. min. after 10 insertions; 5 lbs. min. after 100 insertions; MOISTURE RESISTANCE: Exceeds test requirements of MIL-STD-202A, Method 106†; VIBRATION: Exceeds test requirements of MIL-STD-202A, Method 204†; SHOCK: Exceeds test requirements of MIL-STD-202A, Method 202A†; CORROSION RESISTANCE: Exceeds requirements of 50 hour exposure to salt spray in accordance with MIL-STD-202A, Method 101A, Condition B†; HIGH POTENTIAL: MIL-STD-202A, Method 301†; TEMPERATURE CYCLING: MIL-STD-202A, Method 102A, Condition D.†

MATERIALS

SHELLS: Steel cadmium plated with yellow chromate coating, except Dataphone connectors have clear chromate coating; INSULATORS: D*-Zytel; D*M and Dataphone-Diallyl phthalate, glass filled per MIL-M-14F, Type SDG; D*SM-Diallyl phthalate asbestos filled per MIL-M-14F, Type MDG; D*MA-Diallyl phthalate, glass fibre filled per MIL-P-19833; PIN CONTACTS: D* and D*M-Brass, gold plated (.00003) over silver; D*SM and D*MA-Leaded copper, gold plated (.00003) over silver; Dataphone-Brass, gold plated (.00005) over copper; SOCKET CONTACTS: D*-Phosphor bronze, gold plated (.00003) over silver; D*M-Brass, gold plated (.00003) over silver; D*SM-Leaded copper, gold plated (.00003) over silver; Copper alloy, gold plate over silver plate with stainless steel sleeves. Dataphone-Phosphor bronze, gold plated (.00005) over copper.

† As referenced in MIL-C-24308.

PLUG WITH BASIC LAYOUT IN STANDARD SHELL

PLUG WITH COMBINATION LAYOUT IN STANDARD SHELL

SOCKET WITH BASIC LAYOUT IN SHELL WITH FLOAT MOUNTS

SOCKET WITH COMBINATION LAYOUT IN SHELL WITH FLOAT MOUNTS

Connectors Individually Packed in Heat-Sealed Containers to Assure Extended Shelf Life

To protect D-Subminiature connectors from contamination and other corrosive elements in the air, Cinch individually packs each connector in heat-sealed polyvinyl-chloride containers (as shown) with an inert gas, oxygen-free atmosphere. This assures every customer of extended shelf life. A separate compartment is also provided in each container for the loose crimp-type contacts supplied with the Golden D, Mark II and Mark III connector.

INTEGRATED CIRCUIT SOCKETS

Cinch IC sockets are ideal for testing and prototype purposes as well as production applications. Convenient and dependable, these sockets reduce the possibility of damage to leads and hermetic seals. Cinch IC sockets provide positive electrical contact and low contact resistance. They offer excellent resistance to corrosive atmosphere and to extremes in temperature and humidity.

PRECISION D.I.P. SOCKETS

These sockets combine high contact retention with low contact resistance and high environmental stability. They accept standard 14, 16 and 24-pin dual-inline packages having round or flat leads. (Standard spacing is .300" between lead rows and .100" between lead centers.) Socket leads are on the same centers as the D.I.P. itself. This feature allows easy installation of the socket in PC boards designed for direct insertion of the D.I.P. Choose between diallyl phthalate insulators with gold plated beryllium copper contacts or GP black phenolic insulators with electro-tin plated beryllium copper contacts.

MATERIALS

INSULATORS: GP Black Phenolic per MIL-M-14, type CFG Diallyl Phthalate per MIL-M-14, type SDG; CONTACTS: Beryllium copper with gold or electro-tin plating. **RECOMMENDED MOUNTING METHODS:** CHASSIS: 4-40 x ¼" Fillister head screw; P. C. BOARD: Solder in.

ELECTRICAL SPECIFICATIONS

CURRENT RATING: 1.0 ampere; CONTACT RESISTANCE: 6 milliohms (at 1 ampere); CAPACITANCE PER MIL-STD-202: Method 305 at 100 KHz between adjacent contacts: 0.33 pfd average (phenolic), 0.28 pfd average (diallyl phthalate), between opposing contacts: 0.12 pfd average (phenolic), 0.10 pfd average (diallyl phthalate); WITHSTANDING VOLTAGE BETWEEN ADJACENT CONTACTS: 1800 VRMS; INSULATION RESISTANCE: 1.0 x 10^6 megohms minimum (phenolic); 2.0 x 10^6 megohms minimum (diallyl phthalate).

MECHANICAL SPECIFICATIONS

VIBRATION: Per MIL-STD-202C, Condition D, Method 204A, 10-2000 C.P.S. at 20 G's or .060" double amplitude. No continuity interruptions of 1 microsecond or longer. No damage to contact or insulator. No disengagement of DIP module from the socket; SHOCK: Per MIL-STD-202C, Method 202B/3 blows in each of 3 mutually perpendicular planes. Shock level of 150 G's. No continuity interruptions of 1 microsecond or longer. No damage to contact or insulator. No disengagement of DIP module from the socket; TEMPERATURE RANGE: Phenolic: −65° to 150°C.

"JONES" PLUGS and SOCKETS — 300 SERIES

In addition to the 300 series listed here, Jones Connectors are available in higher ratings.

400 Series: 1200V, 15 amps
2400 Series: 1700V, 15 amps
500 Series: 3KV, 25 amps

For information on these connectors and additional data on the units listed here, contact any Cinch Electronics District Office, or your Cinch Distributor, who has these items in stock for immediate delivery.

P-302-CCT

S-302-AB

ELECTRICAL SPECIFICATIONS

All connector ratings are based on a continuously mated condition. "Rated Voltage" is ⅓ of Voltage Breakdown.

Rated Voltage ..... 730 Volts rms. Contact Resistance .... .016 Ohms max.

Under most normal operating conditions where not all contacts are carrying substantially full rated current, maximum current per contact is rated at 10 amps. The Jones 300 series plugs and sockets are recognized under the Component Program of Underwriters' Laboratories, Inc. In accordance with UL Standard #8, the Underwriters' Laboratories ratings are derived from the condition wherein all contacts are carrying "rated" current simultaneously. The resultant ratings are as follows:

Rated Current		Rated Wattage	
(2-12 contacts)	7.5 amperes	(2-12 contacts)	1875 watts
(15-33 contacts)	4.5 amperes	(15-33 contacts)	1125 watts

MECHANICAL SPECIFICATIONS

INSULATOR: Molded phenolic;; CONTACTS: Phosphor bronze, cadmium plated; HOUSING: Formed metal, black wrinkle finish.

CINCH

TERMINAL BLOCKS and ACCESSORIES

The Jones barrier terminal blocks are made of molded phenolic. Eyelets and screws are nickel-plated brass and terminals are hot solder dipped brass. Fibre or phenolic marker strips are available for all barrier blocks. Barrier blocks are available in standard terminal configurations as shown. Optional terminals are available as indicated by the Y, W, or ¾ W suffix on the part numbers in the charts.

2-140

2-172-W

2-164¾-W

2-164-Y

The standard terminal block with binder head screws can be used for wire or special terminal attachment.
¾ W terminals are available for solder attachment of wires on one side of the terminal block. W terminals are available for solder connection of wires to both sides of the terminal block. (Available as standard on 172 series; special order on others.) Y terminals are available for solder connection of wires underneath the terminal block.

A COMPLETE LINE OF MARKER STRIPS AND FANNING STRIPS IS AVAILABLE FOR THESE BARRIER TERMINAL BLOCKS

Contact any Cinch Electronics District Office, or your Cinch Distributor, who has them in stock for immediate delivery.

SERIES 500

The new 500 series Jones Barrier Terminal Blocks are designed for applications where electrical and mechanical performance requirements are especially critical. Bottoms are closed so that insulating strips are not required. Knockouts are molded into the base so that Y terminals can be accommodated if desired. A top-mounted marker strip can be furnished as described on page 16.

CINCH-NULINE

THE SINGLE SOURCE FOR ALL ROUND CONNECTOR NEEDS

MIL-C-81511 SUBMINIATURE CYLINDRICAL CONNECTORS

Cinch-Nuline "Astro/348®" connectors represent the highest state-of-the-art in round connectors. They have 0.085″ contact centers with dielectric separation of 0.021″, and the dielectric has a one-piece retention system that eliminates metal construction. Other important features include scoop-proof mating, grounding prior to electrical contact, removable crimp contacts, and extreme environment stability. Available are shell sizes for contact configurations of 4, 12, 37, 55, and 85 contacts, five receptacle styles, and standardized accessories including uniquely designed, strain relieving "J" Adapters. Request Catalog Number CN-5.

MIL-C-26500 & MIL-C-38300 CYLINDRICAL CONNECTORS

Cinch-Nuline "Omega®" and "Golden Omega®", the connectors with more hours in the air than any other cylindrical, are available in shell sizes 10 through 22, with any contact style and insert configuration. Available, too, with G-Type conductive shells and lanyard release assemblies. These Cinch-Nuline round connectors operate continuously at 200°C, and withstand violent thermal shock and high G vibration. They resist corrosion, ozone, sand, and dust. Request Catalog Number CN-3.

® Registered TM, Bunker-Ramo Corporation

MIL-C-25516 MINIATURE ENVIRONMENTAL-RESISTANT COAXIAL CONNECTORS

Cinch-Nuline 1200 Series Connectors are environmentally and hermetically sealed connectors for single conductor coaxial and unshielded cables. The 1200 Series is specifically designed for critical liquid quantity measurement systems and other high impedance and RF applications requiring high vibration resistance and maximum reliability. 1200 Series connectors are available in a wide range of configurations in both solder and crimp type terminal designs. Request Catalog Number CN-7.

MATRIX PROGRAM BOARDS

U.S. & FOREIGN PATS. PEND.

CO-ORD Matrix Program Boards are composed of 2 to 6 decks of contacts that are bussed in parallel rows on .250 centers. The contact rows of one deck are usually oriented perpendicular to the rows of adjacent deck(s) so as to obtain switching crosspoints. Electrical connections of the bussed contact rows are effected by inserting shorting pins at the desired crosspoints; "CO-AX", phone plug type pins are available for networks which require component insertion (Diodes, resistors, etc.). Single board matricies of up to 11,000 crosspoints are available in standard or special arrangements. Bussed and isolated contacts can be had alone or in combination. Panels may be screened, engraved, or fitted with pre-punched templates for rapid program changing.

FEATURES

- Closed entry contacts
- High mechanical environment capacity for MIL applications
- Low interlead capacitance (cross-talk) for high frequency applications
- Attractive and uncluttered panel
- Compact package
- Standard sizes available off the shelf
- Permits insertion of components into network without soldering
- Wide variety of switching combinations available using standard hardware

APPLICATIONS

- Computer memories
- Cordless patch panels
- Function generators (Analog/Digital)
- Power distributors
- Thermocouple signal selectors
- Circuit/Component test programmers
- Lighting systems (Special effects)
- Variable sequence selectors
- Variable diode matrices
- Code generators
- Traffic control panels
- Decade switches
- Vending machine control
- Numeric controlled machinery
- Data channeling & logging
- Communications distributors

STANDARD MATRIX BOARDS—SERIES 63014

SPECIFICATIONS

1-Contact Resistance
- a Total Pin Resistance: .004 OHM MAX.
- b Volume Resistivity of Strip: .003 OHM/IN

2-Breakdown Voltage: 1000 VRMS MIN.

3-Current Capacity: 5 AMPS Continuous

4-Materials
- a Plastic Parts: Black Phenolic XXX
- b Flexible Contacts: Heat Treated Beryl. Copper
- c Terminals: Brass
- d Finishes: Gold, Silver or Nickel

PROGRAM PINS

2-D SHORTING PIN
Pins up to 6 deck available

PROGRAM BOARD KITS

KIT BPS-1 consists of a 10 x 10 matrix board similar to #63014-1, above, 10 shorting pins and 10 "CO-AX" diode pins with 1N270's installed $27.00

KIT BPS-2 is the same as BPS-1 but without diodes $22.25

10 x 10 matrix board	$17.00 ea.
Shorting pin	.12 ea.
Diode pin w/1N270	.99 ea.
Diode pin w/o diode	.51 ea.

AVAILABLE FROM STOCK

1/10 INCH CENTERLINE MATRIX

Offers a ½ reduction in both size and weight over standard matrices and can be made to meet any customer specifications. Ideal where space is critical.

CONNECTOR CORPORATION

6025 N. KEYSTONE AVENUE • CHICAGO, ILLINOIS 60646 • TELEPHONE: 312, 539-3108

For many years the electronic industry has relied on the wide range of products, engineering services and consistent production quality of Connector Corporation.

A limited cross section of Connector Corporation's line is illustrated. Your specific requirement can be exactly met and mass produced with good delivery. Many items can be supplied with leads attached and color coded, offering production savings for your assembly. Special items can be designed or developed at relatively low cost. Just let us know what you need.

Products are available in a wide range of insulations and contact materials:

Insulations include: general purpose or mica-filled low loss Phenolic, glass filled alkyd, polypropolene, ceramic,etc., in mold versions. Laminated types include XP, XX XXXP Phenolics, X2B Hard Rubber, Gla Epoxy, Glass alkyd.

Contacts and Platings include: High tensi brass, phosphor bronze or beryllium copp with cadmium, electro tin, silver, hot t dipped, silver-gold flash, gold plating, et

TUBE SOCKETS

Most standard and many special molded & ceramic configurations available as well as laminated socket types. Fixed or collapsible types of shielding are available.

MULTI PURPOSE PHONO CONNECTORS

Sockets available in multiples up to 12 per section. Broad line of individual male and female types in a variety of mountings. Highly reliable for dependable repeated use.

KINESCOPE SOCKET ASSEMBLIES

Include: Miniature Di Heptal Socket for 90° color tubes, 110° Eightar CRT sockets, miniature types for JEDEC E7-91, B7-247 basing (HEPTAL). Many special configurations and types may be furnished in quantity lots.

RECEPTACLES

Numerous varieties. Available in molded or laminated construction. Reliable contacts offer positive electrical and mechanical mating.

PLUGS

Numerous types available, with molded or laminated phenolic insulations. Leads may be supplied to specification.

BATTERY SOCKETS

Complete line for commercial & military batteries. Custom designed to your requirements.

6025 N. KEYSTONE AVENUE • CHICAGO, ILLINOIS 60646 • TELEPHONE: 312, 539-3108

NSISTOR AND VISTOR SOCKETS

lable to mate with 3-pin, ne transistors, and also with nd 4-pin transistors of any figuration on .200 or .100 pin circle.

iature positive contact MIL lity nuvistor sockets for high lity military and commercial ipment.

YSTAL SOCKETS

ommodate single & multiple stals. Include both p.c. and iventional solder lug versions crystals with .486, .273 and 2 pin centers and with .050 .040 pin diameters. Also avail- e to MIL Specs.

SE HOLDERS

sitive grip open type. Features: sy solderability, and versatility construction which permit ltiples or variations to your ec at reasonable cost.

F TV ANTENNAE

taches easily. Can be rotated many different planes for opti- m performance. Long life, uble-free operation.

RANSMITTER TUBE OCKETS

w loss at very high frequencies vailable. Vented to provide aximum cooling of tube base nd anode contact area by con- ection. Voltage breakdown char- cteristics are enhanced by ap- ropriate barriers between con- ct positions where indicated.

IGH VOLTAGE UBE SOCKETS

esigned for application with use appropriate insulating materi- ls and spacings.

RF COAXIAL ANTENNA CONNECTORS

or auto receivers & similar ap- lications. Rugged construction. xcellent contact resistance and etention.

MULTI-PIN MALE/FEMALE CONNECTORS

Provide quick reliable connect and disconnect for cable assem- blies. Insert and extract easily, yet have reliable contact reten- tion and resistance.

BATTERY CONNECTORS AND WIRE ASSEMBLIES

Snap-on and positive contact types available with wired leads if desired. Wire assemblies fur- nished to your specifications as to type of wire, length and ter- mination attachments.

SEALECTRIC

SEALECTRIC SWITCHES AND RELAYS

For standard & special applica- tions, send us your requirements.

Precision Electronic Connectors

PRINTED CIRCUIT CONNECTORS*

Provide positive, space-saving connections between printed circuitry and conventional wiring through PC boards, tape cables or "plug" mounted subassemblies. Feature Continental's patented "Bellowform" contacts; glass-filled Diallyl Phthalate, Plasko Alkyd, mineral filled Melamine moldings. Receptacles accommodate 1/32", 3/64", 1/16", 3/32" or 1/8" board thickness single and dual readouts on .050", .075" .100", .125", .150", .156" and .200" centers.

*Patent No. 2,875,42

SERIES 600

PC BOARD RECEPTACLE

Card edge printed circuit connectors 1/32", 3/64", 1/16", 3/32" and 1/8" printed circuit boards. Available in wide range of sizes, single and dual readout contact construction . . . up to 210 terminals.

Also available with .025" and .045" square solderless-wrap terminations.

SERIES 672

PC TEST POINT

Provide conveniently located test points to check printed circuitry. Available with 4, 5, 6, 8, 10, 11, 20, 21, 28, 30, 42 and 63 contacts which grip and hold securely a standard .080" test probe. Connectors have recessed and floating pin terminals mounted at right angle to the test socket. Pins dip solder to printed circuit board.

SERIES 600-70 & 683

PC RIGHT ANGLE PIN AND SOCKET

MEET MIL-E-5400K SPECIFICATIONS

Provide additional flexibility in printed circuit system design. Mating parts have set of solder cups on socket and set of right angle pins on plug which mounts and dip solders to the printed circuit board. Wide variety of configurations, contact sizes, moldings and mounting styles are available.

MOST PC CONNECTORS AVAILABLE IN THESE WIRING STYLES

Wire-Wrapped

Eyelet Lug

Dip Solder

Taper Tab

EXCLUSIVE PATENTED "BELLOWFORM" CONTACT

Coil spring action grip clasps printed circuit board firmly over 100% of the contact area. Contact permits use of undersized or oversized board tolerances while maintaining low contact resistance. It "rides" with the printed circuit board under extreme vibration conditions or misalignment.

TERMINAL BLOCKS

SERIES 145-58, 145-50 AND 145-48. Precision reamed, solderless taper pin receptacles in single, dual and triple row construction, molded-in for highest durability. Available in any combination of feedthru individual or shorting terminals. Internal bus between any combination of terminals eliminates external wiring. Mounting holes for stacking, right angle and perpendicular mounting. Molding is glass filled Dially Phthalate (MIL-P-19833, Type GDI-30).

CONTINENTAL

CONTINENTAL CONNECTOR CORPORATION • 34-63 56th STREET

See YELLOW SECTION for Local Offices, Phones

for Commercial & Military Applications

PLUG & SOCKET CONNECTORS for every requirement.

A complete line of high-reliability connectors for computer, missile, aircraft, communications and other critical applications. In addition to standard specifications, these connectors can be supplied with such optional accessories as aluminum hoods, protective shells, polarizing screwlocks*, and solder filled contacts. Various molding compounds are also available.

*Patent No. 2,746,022

MICRO-MINIATURE

5 TO 104 CONTACTS. Ruggedized to withstand shock and vibration extremes. Meet MIL-C-8384 specs. Available with guide pins and sockets, polarizing screwlocks, cable brackets, hoods and glass filled Diallyl Phthalate molding.

Breakdown Voltage (sea level), 2000V. RMS • Current Rating, 3A • Min. Creepage Bet. Contacts, .070″ • Min. Air Space Bet. Contacts, .040″ • Contacts, center-to-center 3/32″ • Pin Diameter, .030″ • Solder Cup, #22 AWG wire.

SERIES MM22 FIXED CONTACTS AND SERIES MMM CRIMP REMOVABLE CONTACTS

SUBMINIATURE

5 TO 104 CONTACTS. Meet or exceed applicable paragraphs of MIL-C-5015 and MIL-C-8384. Optional features include guide pins and sockets, polarizing screwlocks, protective shells and aluminum hoods. Glass-filled Diallyl Phthalate molding.

Breakdown Voltage (sea level), 2000V. RMS • Current, 5A. Cont., 7.5A max. • Min. Creepage Bet. Contacts, .078″ • Min. Air Space Bet. Contacts, .045″ • Contacts, center-to-center, 1/8″ • Pin Diameter, .040″ • Solder Cup, #20 AWG wire.

SERIES SM20

MINIATURE

4 TO 104 CONTACTS. A larger size, also available with guide pins and sockets, polarizing screwlocks, aluminum hoods, protective shells, and various molding compounds. Can be supplied with similar specifications in hexagonal types with 1, 4, 5, 7, 9 and 10 contacts.

Breakdown Voltage (sea level), 3000V. RMS • Current Rating, 5A. cont., 7.5A. max. • Min. Creepage Bet. Contacts, 1/8″ • Min. Air Space Bet. Contacts, .070″ • Contacts, center-to-center, .150″ • Pin Diameter, .040″ • Solder Cup, #20 AWG wire.

SERIES 20

CENTER SCREWLOCK

34, 50, 78, 104, 152 CONTACTS. Double lead thread action screwlock, stainless steel side channels and closed entry contacts for maximum reliability. 152 removable contacts Series 2500152 and 10-contact and 22-contact types, for #20 AWG wire also available.

Breakdown Voltage (sea level), 3000V. RMS • Current Rating, 10A. cont., 13A. max. • Pin Diameter, .062″ • Min. Creepage Bet. Contacts, .110″ • Min. Air Space Bet. Contacts, .050″ • Contacts, center-to-center, .150″ • Solder Cup (also solderless-wrap and taper pin), #16 AWG wire.

SERIES 1900

MINIATURE AND MICROMINIATURE WITH CRIMP REMOVABLE CONTACTS

Miniature rectangular rack and panel connectors with removable crimp termination contacts. Available with 7, 9, 14, 18, 20, 26, 34, 50, 66, 75, and 104 contacts. For solderless wiring. Insertion, removal and crimping tools available. Conform to MIL-C-22857 specifications. Also in Microminiature Sizes: 50, 100, 200 Contacts. Series 25MM.

SERIES 25

complete catalog data on request

CONNECTORS

CURTIS TERMINAL BLOCKS

FEED-THRU BLOCKS

"GFT" SERIES
300 VOLTS
20 AMPS

The GFT Series offer fully insulated feed through. Black thermosetting phenolic moldings. Terminals: Bright tin plated external #6-32 or #8-32 screws or ¼ and 3/16 tab terminals. Internal choice of screw, solder turret, taper pin receptacle, or PC pin. One to 26 poles per block. Terminal spacing 7/16" C. to C.

TRACK-MOUNTED BLOCKS

"W" SERIES
600 VOLTS

Prepunched steel track accepts vertical snap-in 2 or 3 pole modules. Terminals are screw bar 25 amps and tubular connectors, with or without traveling pressure pads, 50 amps, and high current 75 amps single pole tubular. Also single pole 13/32 x 1½ ferrule-type cartridge fuse holders and 15 amps pivoting disconnect switch. Six foot lengths available. Terminal spacing 7/16" C. to C.

"SW" SERIES
600 VOLTS

Fit same track as "W" Series. Two or three pole units of white molded polypropylene. Terminals are screw bar 25 amps and tubular connectors, with or without traveling pressure pads, 50 amps. Six foot lengths available. Terminal spacing 3/8" C. to C.

PRINTED CIRCUIT BLOCKS

TYPE GBP
300 VOLTS
20 AMPS

Identical to GFT with inte[illegible] .062 dia. printed circuit [illegible] and without feed-thru ins[illegible]tion sleeve.

TYPE SEP
300 VOLTS
5 AMPS

The SE printed circuit b[illegible] has black thermosetting [illegible]nolic moldings. Termin[illegible] External surface screws, [illegible] or without surface clamps [illegible] combination 2, 4 or 6 .1[illegible] quick-disconnect tabs. In[illegible]nal PC pins are .047" [illegible] One to 26 poles per blo[illegible] Terminal spacing ¼" C. to[illegible]

HIGH CURRENT BLOCKS

TYPES "T" & "U"
600 VOLTS

Sectional design with alu[illegible]num mounting brackets. T[illegible]minals are high pressure [illegible]bular of electrolytically p[illegible] copper. Black thermosetti[illegible] phenolic moldings.

"T" rated 125 amps — ta[illegible] AWG No. 6 to No. 1/0 wi[illegible] One to six poles per blo[illegible]

"U" rated 250 amps — ta[illegible] No. 6 to 250 MCM w[illegible] AWG. One to four poles [illegible] block.

Terminal spacing 1 3/32" [illegible] to C.

CURTIS RELAY SOCKET ASSEMBLIES

All Curtis Relay Socket Assemblies are of printed circuit construction with either Curtis GB or SE Terminal Block Connections. (Wire clamps optional.) They pop-in or out vertically into prepunched vinyl track to 48" lengths, requiring only two or three mounting screws. Patent pending. CSA approved. Special configurations upon request.

RS8

Octal socket for 2 P.D.T. relays. Rated 10 amps, 250 volts.

RS10

11 pin receptacle for 3 P.D.T. relays. Rated 10 amps, 250 volts.

RS11 11 pin round receptacle for 3 P.D.T. relays. Rated 10 amps, 250 volts.

RS12 11 pin receptacle for 3 P.D.T. relays. Rated 10 amps, 250 volts.

RS14 14 pin receptacle for miniature 4 P.D.T. relays. Rated 5 amps, 125 volts

RS15 15 pin receptacle for miniature 4 P.D.T. relays. Rated 5 amps, 125 volts.

RS16 8 pin receptacle for 2 P.D.T. relays. Rated 10 amps, 250 volts.

FREE Send today for your 24-page Terminal Block Catalog and Relay Socket Assemblies literature.

BINDING POSTS, CONNECTORS, SOCKETS

custom connecting devices...

SOCKETS

, 8 and 9-Pin Miniature Sockets. o MIL-S-12883A or commercial equirements. Contacts: brass, hosphor-bronze or beryllium-opper, with various finishes. Mica-filled, general purpose phenolic or eramic. Top mount, bottom mount, plit-saddle or shield base versions. 4 ground lugs available in ottom mount version. Various mounting centers.

P.C. CARD EDGE CONNECTOR

9775-89

Miniature Card-Edge Connector designed for automatic solderless wrap connections.

Specifications:

Housing: Glass filled nylon.

Contacts: Beryllium-copper, gold over nickel-plated, on 0.100 centers, 0.025 square tails.

Accepts a 0.062 thick P.C. board.

SOCKETS

9878-1

9713-282

Compactron Socket, #9878-1. Accommodates any Compactron tube. Top or bottom mount saddle. 4 ground lugs on bottom mount optional. 1 5/16" centers. Mica-filled or general purpose phenolic.

10-Pin Socket, #9713-282. Accepts new 10-Pin tube. Top or bottom mount. 4 ground lugs on bottom mount optional. Mica-filled or general purpose phenolic.

SOCKETS

119 Series

9718 Series

119 Connector. 1 to 5 contacts. 7/8" mounting centers.

9718 Series. Up to 12 contacts. 1 5/16" mounting centers. Many combinations available without tooling.

(Mating plugs available for all models)

UNIVERSAL BINDING POSTS

9738-19 9766-150-1 7186

Multi-type. Accepts banana plug. "D" insulators for keyed mounting. Non-removable tops. Red or black phenolic.

#9738-19 — Rated 30 amps at 1000V. Nickel-plated brass.

#9766-150-1 — Miniature. Extends only 51/64" from panel when closed. Max. dia., 17/32". Gold flash on nickel-plated brass.

Twin Assemblies, #7186. Boss insulates posts from panel. 7/8" mounting centers. 6-32 molded-in stud. 1/2" dia. non-removable tops. Brass and phenolic.

SPRING BINDING POSTS

6692

9795-13

WB-8-CHA-1 9766-176

Quick connections. D-shaped hole for uniform tension across wire. Accepts phono-tip. Threaded stem and dowel optional. Nickel-plated brass. Red or black phenolic caps.

#9795-13 — with stem and dowel.

#6692 — without stem or dowel.

#WB-8-CHA-1 — To Signal Corps spec. U 106/U. Watertight. Can also be produced to MIL-P55149/8.

#9766-176 — Miniature, watertight. Meets MIL-P-55149/7 Max. dia. 0.40". High impact strength nylon plastic body.

RIGHT ANGLE MALE CONN.

9775-67

Designed primarily for terminating printed circuit boards into wire-wrap plates on military air-borne and ship board electronic equipment, this header also has numerous commercial applications.

Specifications:

Insulator: Diallyl phthalate.

Contacts: Brass, gold over nickel-plated, on 0.100 square grid.

Available in 34, 40 and 50 contact configurations.

TRANSISTOR SOCKETS

9866-13-6 9866-13-4

Designed for JEDEC series transistors. One-piece integral saddle design. Speedy assembly with rivets or #2 screws. Contacts are silver-plated beryllium copper with gold flash. Mica-filled phenolic sockets meet MIL-M-14 MFE specs.

POWER TRANSISTOR SOCKET

9866-15-1

For to -3 power transistors. Special design permits **complete** electrical isolation of base connection. 1-piece molded construction of high impact Bakelite.

FUSE HOLDER

9138

Heavy-duty Holder. Housing, #9138. Cap, #9137. Solder or crimp-type contacts. General purpose phenolic.

Springs according to type of fuse. Assembled or unassembled. Can also be supplied in thermoplastic nylon.

ADAPTORS

9864-1C 9865-1C

9864-1 9865-1

Converts any 7 or 9-Pin miniature socket into a connector. Brass cadmium contacts, mica-filled or general purpose phenolic.

7-Pin Socket, #9864-1
Cap, #9864-1C

9-Pin-Socket, #9865-1
Cap, #9865-1C

TIP JACKS

9768-17 7115 9768-13

Metal Jack, #9768-17. Beryllium-copper contacts. Nylon insulator in wide range of colors.

Molded Jack, #7115. Red or black general purpose.

Metal Jack, #9768-13. Brass body. Phosphor-bronze contacts. Cap in red or black phenolic. Locking nut and insulation washer available.

SOCKETS

9748-1

Crystal Socket (TS0205C01), #9748-1. Glazed Steatite per JAN-1-10. Meets MIL-S-12883A. Contacts: phosphor-bronze or beryllium copper, silver-plated. Also available in black general purpose and mica-filled low loss.

HUGH H. EBY CO.

EARNED LEADERSHIP IN THE ELECTRONICS INDUSTRY THROUGH RELIABLE, QUALITY PRODUCTS

DALE® for Optimum Value in Connectors

SERIES EBT 156

PHYSICAL and ELECTRICAL

Number of Contacts: 8, 10, 12, 15, 18 or 22
Contact Spacing: .156"
Board Thickness: .054" to .070"
Board Slot Depth: .330"
Current Rating: 5 amps
Test Voltage between Contacts: At Sea Level: 1800 VRMS; At 70,000 feet: 450 VRMS
Insulation Resistance: 5000 meg. min.
Contact Resistance: 30 millivolts max. at rated current

COMPONENT MATERIAL

Body: Glass-filled phenolic per MIL-M-14, Type MFH, black
Contacts: Nickel silver per QQ-C-585, alloy 770, spring temper. Gold flash optional.
Polarizing Key: Glass-filled nylon
Optional Threaded Mounting Insert: Nickel plated brass. (Type Y)
Optional Floating Mounting Bushing: Cadmium plated brass. (Type Z)

APPLICATION For use with 1/16" printed circuit boards requiring an edgeboard type connector on .156" centers.

SERIES EBTL 050

PHYSICAL and ELECTRICAL

Number of Contacts: 8, 16, 20, 25, 32, 50 or 64 per side
Contact Spacing: .050"
Board Thickness: Size 1 = .027"-.035"; Size 2 = .056"-.068"
Board Slot Depth: .200"
Current Rating: 0.5 amp
Test Voltage between Contacts: At Sea Level: 1200 VRMS; At 50,000 feet: 675 VRMS
Insulation Resistance: 5000 meg. min.
Contact Resistance: 10 millivolts max. at rated current

COMPONENT MATERIAL

Body: Glass-filled phenolic per MIL-M-14, Type MFH, black
Contact Backer Strips: Epoxy glass laminate per MIL-P-18177, Type GEE, black
Contacts: Beryllium copper per QQ-C-533, alloy 172. Gold plate per MIL-G-45204.
Polarizing Key: Polycarbonate

APPLICATION For use with 1/32" and 1/16" printed circuit boards in integrated thin film, and semiconductor circuitry with .050" contact spacing.

SERIES 300

300 PR

300 S

PHYSICAL and ELECTRICAL

Number of Contacts: 7, 15, 19 and 25
Contact Spacing: 0.250", staggered rows provide a .125" grid.
Contact Gauge: #20 AWG
Minimum Creepage Path between Contacts: 5/32"
Minimum Air Space between Contacts: 7/64"
Current Rating: 7.5 amps
Breakdown Voltage: At Sea Level: 3600 VRMS; At 70,000 feet: 975 VRMS

COMPONENT MATERIAL

Contact Pin: Phosphor Bronze
Contact Socket: Phosphor Bronze
Contact Plating: Gold over silver
Guide Pins: Stainless steel, passivated
Standard Body: Glass-filled diallyl phthalate per MIL-P-19833, Type GDI-30 green. Other body material supplied upon request.

APPLICATION Where permanent mounting of male connector to printed circuit board is required with mating female connector available.

SERIES 303

303S-45

303PR-45

PHYSICAL and ELECTRICAL

Number of Contacts: 45
Contact Gauge: #22 AWG
Minimum Creepage between Contacts: 1/16"
Minimum Air Space between Contacts: 1/64"
Contacts, Center to Center: .050"
Voltage Breakdown, Contact to Contact and Contact to Ground: At Sea Level: 1200 VRMS • At 70,000 feet: 325 VRMS
Current Rating: 3 amps

COMPONENT MATERIAL

Contact: Phosphor Bronze, Gold Plated
Contact Plating: Gold over silver
Studs, Pilot Pins, Washers, Nuts: Corrosion-resistant steel, passivated
Standard Body: Glass-filled diallyl phthalate per MIL-M-19833, Type GDI-30 green

APPLICATION For use in equipment requiring printed circuit connectors of the dip solder type with mating female connector.

SHP 40

PHYSICAL and ELECTRICAL

Number of Contacts: 40
Contact Spacing, center to center: .100"
Minimum Air Space between contacts: .043"
Minimum Air Space between rows of contacts: .076"
Current Rating: 3 amps minimum per contact at 300 VRMS
Breakdown Voltage: At Sea Level: 1500 VRMS; At 60,000 feet: 450 VRMS
Resistance between contact ends: 10 milliohms max.
Minimum Insulation Resistance: 100,000 megohms from contact to contact and from contact to heatsink.

COMPONENT MATERIAL

Body: Diallyl phthalate per MIL-P-19833, Type GDI-30F, green
Heatsink: Aluminum alloy 5052-H32, QQ-A-250/8; anodize MIL-A-8625, Type II, Class 2, black
Contacts: One-piece construction of brass, 1/2 hard, QQ-B-613, Composition 2; copper plate per MIL-C-14550; gold plate per MIL-G-45204. Mating surfaces have a 32 microinch finish.
Contact Shield: Aluminum alloy 5052-H32, QQ-A-250/8; anodize MIL-A-8625, Type II, Class 2, black.

APPLICATION For use in the various Navy standard hardware programs and commercial modular designs.

SERIES PJ

PJEI-20DG

PJI-20DG

PHYSICAL and ELECTRICAL

Current Rating: 7.5 amps
Socket Contact Engages: 0.080" dia. probe

COMPONENT MATERIAL

Standard Body: Glass-filled diallyl phthalate per MIL-M-19833, Type GDI-30, green
Pin Contacts: Brass
Socket Contacts: Phosphor Bronze
Contact Plating: Gold over silver

APPLICATION Printed circuit checkout and testing.

MODEL 500 SR5

PHYSICAL and ELECTRICAL

Number of Contacts: 5
Contact Spacing: 0.150"
Contact: Accepts .080" dia. probe
Current Rating: 5 amps
Breakdown Voltage: At Sea Level: 3000 VRMS; At 70,000 feet: 676 VRMS

COMPONENT MATERIAL

Contact Socket: Phosphor Bronze
Contact Plating: Gold over silver
Standard Body: Glass-filled diallyl phthalate per MIL-P-19833, Type GDI-30, green. Other materials available upon request.

APPLICATION Permanent or semi-permanent test points for checkout and testing of printed circuits.

SERIES MM22 and MM24

MMP22-34SL

MMS22-34SL

MMP22-5 MMS22-5

PHYSICAL and ELECTRICAL

Number of Contacts: 5, 7, 9, 11, 14, 20, 26, 29, 34 and 44
Contact Spacing: 3/32"
Contact Gauge: MM22 Series = 22 gauge. • MM24 = 24 gauge
Minimum Creepage Path between contacts: 5/64"
Minimum Air Space between contacts: 3/64"
Current Rating: MM22 Series = 5 amps; MM24 Series = 3 amps
Breakdown Voltage: At Sea Level: 2000 VRMS; At 70,000 feet: 500 VRMS

COMPONENT MATERIAL

Contact Pin: Phosphor Bronze
Contact Socket: Phosphor Bronze
Contact Plating: Gold over silver
Screwlocks: Stainless steel, passivated
Guides: Brass, gold plated
Standard Body: Glass-filled diallyl phthalate per MIL-P-19833, Type GDI-30, green. Other body material supplied upon request.

APPLICATIONS Especially suited for use in airborne, instrumentation and portable equipment applications or wherever the following requirements must be met: Minimum space and weight without sacrifice of performance, high quality materials, long service life, high vibration and shock resistance, and positive locking.

DALE® for Optimum Value in Connectors

ERIES M20

HYSICAL and ELECTRICAL

mber of Contacts: 18
ntact Spacing: 0.150″
ntact Gauge: #20 AWG
nimum Creepage Path between Contacts: 1/8″
nimum Air Space between Contacts: 3/32″
rrent Rating: 7.5 amps
eakdown Voltage: At Sea Level: 3000 VRMS
At 70,000 feet: 675 VRMS

MS20 MP20

OMPONENT MATERIAL

ntact Pin: Brass
ntact Socket: Phosphor Bronze (beryllium copper also available).
ntact Plating: Gold over silver
crewlocks: Stainless steel
Standard Body: Glass-filled diallyl phthalate per MIL-P-19833, Type GDI-30, green. Other materials available on request.
Guides: Stainless steel

PPLICATIONS For use in instrumentation, avionics, ommunications, missiles, guidance systems, computers, portable quipment and test equipment.

SERIES SM20

PHYSICAL and ELECTRICAL

Number of Contacts: 5, 7, 11, 14, 20, 26, 34, 42, 50, 75
Contact Spacing: 0.125″
Contact Gauge: #20 AWG
Minimum Creepage Path between Contacts: 5/64″
Minimum Air Space between Contacts: 3/64″
Current Rating: 7.5 amps
Breakdown Voltage: At Sea Level: 2000 VRMS
At 70,000 feet: 500 VRMS

SMS20 SMP20

COMPONENT MATERIAL

Contact Pin: Brass
Contact Socket: Phosphor Bronze. Beryllium copper also available.
Contact Plating: Gold over silver
Guides: Stainless steel, passivated
Screwlocks: Stainless steel, passivated
Standard Body: Glass-filled diallyl phthalate per MIL-P-19833, Type GDI-30, green. Other body material supplied upon request.

APPLICATIONS For use wherever space is at a premium and a high quality connector is required in avionics, automation, communications, controls, instrumentation, missiles, computers and guidance systems.

SERIES QX32

PHYSICAL and ELECTRICAL

Minimum Creepage between Contacts: 9/64″
Minimum Air Space between Contacts: 7/64″
All male contacts are .093″ in diameter. Current ratings vary only because some solder cups are made for #12 AWG and others for #16 AWG.

QX32S-1 QX32P

Voltage Breakdown Contact to Contact (#12 AWG solder cup): At Sea Level: 3300 VRMS
At 70,000 feet: 712 VRMS
Current Rating: 23 amps #12 AWG • 13 amps #16 AWG
Voltage Breakdown Contact to Contact (#16 AWG solder cup): At Sea Level: 3600 VRMS • At 70,000 feet: 750 VRMS

QX32S

COMPONENT MATERIAL

Closed Entry Socket Contacts: Phosphor Bronze*, gold over silver
Inserts and Hardware: Stainless steel, passivated*
"O" Ring: Synthetic rubber **Boot:** Neoprene
Body Material: Glass-filled diallyl phthalate per MIL-M-19833, Type GDI-30, green. Consult factory for other materials.
For use with QX32S, a shorting plug to ground static electricity is available. See QX72 and MX72 shorting plugs below.
*Contact factory. Beryllium copper can be specified to ordinance drawing 10182288.

APPLICATION Used in the firing system of missiles.

SERIES S20

COMPONENT MATERIAL

Molded Body: Orlon-filled diallyl phthalate per MIL-M-14F, Type SDI-5 (blue), furnished as standard.
Contact Pin: Brass, gold over silver
Contact Socket: 4 tine beryllium copper, gold over silver
Coaxial Insulator: Teflon
Coaxial Socket Body: Brass, silver plating standard. Gold also available.
Coaxial Socket Contact: Beryllium copper, gold over silver
Shell and Retaining Plate: Aluminum, cadmium plated and gold iridited

Coaxial Contacts are for use with Adapter No. 2710-10 by Cannon or No. 5988 by Greymar and fit RG 188/U cable.

S20P-41 and S20S-41

PHYSICAL and ELECTRICAL

Minimum Creepage Path between Contacts: 1/8″
Minimum Air Space between Contacts: 1/16″
Contacts, center to center: 3/32″
Ambient Temperature Range: −67° F to +250° F
Approximate Weight: S20S-41 = 1.5 oz.
S20P-41 = 1.0 oz.
Voltage Breakdown, contact to contact: At Sea Level: 2500 VRMS
At 70,000 feet: 600 VRMS
Current Rating: 10 amps

S20P-41 S20S-41

S20P-20-8 and S20S-20-8

PHYSICAL CHARACTERISTICS

Minimum Creepage Path between Contacts: 1/8″
Minimum Air Space between Contacts: 1/16″
Contacts, center to center: 3/32″
Approximate Weight: S20P-20-8 = 1.5 oz.
S20S-20-8 = 1.0 oz.
Ambient Temperature Range: −67° F to +250° F

S20P-20-8X S20S-20-8X

S20P-21-2R and S20S-21-2R

PHYSICAL CHARACTERISTICS

Minimum Creepage Path between Contacts: 7/64″
Minimum Air Space between Contacts: 1/16″
Contacts, center to center: .150″
Ambient Temperature Range: −67° F to +250° F
Approximate Weight: S20P-21-2R = 1.6 oz.
S20S-21-2R = 1.1 oz.

S20P-21-2R S20S-21-2R

S20P-13-4R and S20S-13-4R

PHYSICAL CHARACTERISTICS

Minimum Creepage Path between Contacts: 7/64″
Minimum Air Space between Contacts: 1/16″
Contacts, center to center: .150″
Ambient Temperature Range: −67° F to +250° F
Approximate Weight: S20P-13-4R = 1.8 oz.
S20S-13-4R = 1.3 oz.

S20P-13-4R S20S-13-4R

QX72 and MX72

COMPONENT MATERIAL

QX72

Molded Body: Red asbestos-filled diallyl phthalate per MIL-M-14, Type MDG. For other molding compounds, contact factory.
Molded-in Insert Plate: Aluminum QQ-A-325
Guide Pins and Contact Pins: Aluminum QQ-A-325

QX72 MX72

MX72

Body: Stainless Steel
Guide Pins and Contact Pins: Stainless steel
Body Finish: Exposed surface has yellow zinc chromate primer per MIL-P-8585 followed by red enamel TT-E-489, color 11105 in FED. STD-595.

SERIES 400 and 401

PHYSICAL and ELECTRICAL

Voltage Breakdown, contact to contact:
At Sea Level: 2000 VRMS
At 70,000 feet: 500 VRMS
Minimum Creepage Path between Contacts: 5/64″
Minimum Air Space between Contacts: 3/32″
Contacts, center to center: .150″

400PF 400RM

COMPONENT MATERIAL

Molded Body: Glass-filled diallyl phthalate per MIL-M-19833, Type GDI-30. For other materials, contact factory.
Hood: Aluminum, anodized (on 401PF)
Shells, Mounting Nut and Coupling Nut: Aluminum, clear anodized.
Contact Pins: Brass, gold over silver
Contact Socket: Phosphor Bronze, gold over silver
Lock Ring: Brass, cadmium plated
Retaining Ring: Stainless steel **Protective Cap:** Polyvinyl

401PF Mates with Series 400RM

APPLICATION Series 400: For use in equipment requiring a 41, 51 or 55 pin sealed connector, with a mating non-sealed female connector. **Series 401:** For identical applications where hood is required. Mates with Series 400RM connectors.

WIRING DEVICES FOR EVERY NEED

TERMINALS & SPLICES

- Wire Ranges: #26 thru 4/0, Loose Piece. Mounted on Tape or in Continuous Strips in #26 thru 10 Sizes
- Tongue Types: Ring, Rectangular, Spade, Flanged Spade, Hook and Slotted Ring
- Approvals: Terminals are Covered by UL., CSA and Military Specifications, where Applicable

AVIKRIMP® — Tin-plated brass sleeve strengthens barrel. Color coded Nylon insulating sleeve adds more wire protection. Operating temperatures: continuous duty— −40°F to 250°F, intermittent duty — to 350°F. WIRE RANGE: #26-10

INSULKRIMP® — PVC insulation sleeve permanently attached to butted seam barrel (#22-10) or brazed seam barrel (#8-2). Operating temperatures: continuous duty— −40°F to 167°F, intermittent — to 300°F. WIRE RANGE: #22-2

NYLAKRIMP™ — Ideal for larger wire applications involving temperature extremes and vibration. Rigid, overhanging Nylon insulating sleeve covers silver-brazed barrel. Withstands continuous duty temperatures from −60°F to 250°F. WIRE RANGE: #8-4/0

VIBRAKRIMP® — Made for excessive vibration applications. Seamless tin-plated brass sleeve covers basic KRIMPTITE barrel. Its overhang prevents wire flex. Single crimp terminates wire. WIRE RANGE: #22-10

VERSAKRIMP™ — Has silver brazed barrel. Seam will not open under stress or wire pull. Crimps using many types of tooling. Ideal for solid or stranded wires. WIRE RANGE: #22-4/0

KRIMPTITE™ — One piece, non-insulated design. Ideal general purpose terminal for uses where special features are unnecessary. Full length barrel makes crimping easy. WIRE RANGE: #26-10

BUTT SPLICE — Accepts stripped wires from each end. Wires "butt" in center. A crimp at each end provides secure connection. Available in insulated and non-insulated styles. WIRE RANGE: #22-4/0

PARALLEL SPLICE — Stripped wires insert from each end and lie side-by-side. Single crimp in center forms a secure connection. Available in insulated and non-insulated styles. WIRE RANGE: #22-4/0

SEND FOR CATALOG OEM-6

QUICK CONNECTS

- Female Receptacles and Male Tabs

PDQ™ quick connect receptacle terminals handle 26-12 AWG wires and .110 x .020, .110 x .032, .187 x .020 and .250 x .032 inch male tabs. Insulated or non-insulated barrels. Available loose piece, on tape or continuous strip. Meet N.E.M.A. and U.L. standards.

Male tab terminals and single or twin tab lugs fit PDQ receptacle terminals perfectly. Lugs have standard 180°, 90°, 45° angles. Custom angles available. Single, dual or custom mounting holes. Tabs are .250 thru .110 inches wide.

SEND FOR CATALOG PDQ-1

CRIMPING TOOLS

- Hand Operated and Semi-automatic . . . Matched-to-terminal Designs . . Free 30-day Evaluation Trials

RATCHET HAND TOOLS — Special ratchet mechanism won't allow terminal to be released until fully crimped. Handles terminals and splices from #26 thru #10 AWG.

PORTABLE AIR TOOLS — 27 oz. AT-200 hand tool uses standard air pressure to crimp #26 thru #6 AWG terminals and splices. Bench adapter accessories available.

AIR-HYDRAULIC TOOL — Compact PUTT-PUMP™ operates on standard air pressure to crimp #8 thru #1/0 wires. ELECTRIC-HYDRAULIC RAPID-PUMP™ crimps #8 thru #4/0 wires.

AUTOMATIC FEED TAPE AND STRIP PRESSES — Terminals are loaded into crimping dies automatically. Cycled for up to 3,600 terminations per hour. Crimps #26 thru #10 AWG sizes. Air and electrically operated models.

SEND FOR CATALOG CT-1

TERMINAL BLOCKS

- Closed Back . . . Open Back . . . Military Blocks

TWIN SCREW — Choose closed back design with molded-in plates and protected mounting holes. Or open back design. Rated 5 to 30 amps. Complete selection of lugs and hardware.

OPEN BACK

CLOSED BACK

SINGLE SCREW — These blocks weigh less and occupy less space. Same design features as their twin screw counterparts. 5 to 30 amp. rating. Full selection of lugs and hardware.

TERMINAL BLOCK TERMINALS — Match-fitting to blocks assures reliability in sizes 26 thru 10 AWG. Spade, Flanged Spade and Rectangular tongues are 3/16", 1/64", 21/64" or 27/64" wide.

Nurl-Loc® HIGH DENSITY I.C. PACKAGING PANELS

New high density packaging panels that include non-twisting Nurl-Loc® terminals are summarized in Bulletin FS-14, available on request. Used with 14 and 16 pin dual-in-line I. C.'s, the panels include power and ground shields for I. C. high frequency applications, as well as other desirable features. Two designs are standard, for 60 and 30 pattern boards, with other layouts available on special order.

TERMINALS

- Metal to metal press-in design
- Solid molded construction
- Highest radial and axial pull-out resistance

Nurl-Loc® TERMINALS AND TEST JACKS

Electronic Molding offers the largest variety of molded insulated terminals and test jacks available anywhere. The metal inserts are molded into high-temperature Diallyl Phthalate, (500°F) forming a strong integral unit that will not crack while soldering. The metal-to-metal Nurl-Loc press-in feature (shown left) assures highest radial and axial pullout resistance of any terminal of this type. Ten colors and mounting tools are available.

ecco RF Connectors

UHF SERIES CONNECTORS

UHF connectors for small and medium sized cables. Non-weather-proof and non-constant impedance. For limited applications up to 500 MHz, and peak voltages up to 500 volts. For higher voltage and temperature applications, connectors are available with Teflon* insulation.

*Registered DuPont trademark.

Total Connector Capability from the Innovator:

METAL PLATE BACK PANEL CONNECTORS AND WIRING SERVICE

The metal plate connecting system is the modern day method o mounting and interconnecting electronic components. Most dramati ly used in the computer equipment field, this packaging system provid a high density system compatible with automatic wiring methods. he metal plate system is modular in concept and Elco has a wide assortm nt of standard parts we'll assemble and wire to your particular ne s.

Request Catalogue MPM

METAL-TO-METAL PRINTED CIRCUIT CONNECTORS MINIATURE AND SUBMINIATURE

Three specifications (MIL-E-5400, MIL-E-8189, and MIL-T-21200) requ two-piece metal-to-metal printed circuit connectors in airborne equ ment. VARICON™ connectors are metal-to-metal and provide a multit of options: contact spacings of .050″, .075″, .100″, .156″ and .20 terminals for wire wrap, crimp, solder, and taper tab; connector si from 2 to 152 contacts.

Request Catalogue PCM

CARD-EDGE PRINTED CIRCUIT CONNECTORS

Card-edge connectors mate directly with the printed circuit ca and are available in a wide range of sizes (4 to 100 contacts), config rations, and contact spacings (.100″, .125″, .150″, .156″, and .200 Optional means for terminating include wire wrap, solder, and taper ta Other options include: connectors with or without card guides; vario mounting provisions — threaded inserts, floating eyelets, force fit hub and standard mounting holes.

Request Catalogue CEM

BOARD-TO-BOARD PRINTED CIRCUIT CONNECTORS

Make your connections with a total system (the Elco system). Whethe your p.c. boards are perpendicular, parallel, or even tandem to each other, we have the right type, connector size, and contact spacing (.100″, .125″, .150″, .156″, and .200″). Each and every type uses exclusively, the VARICON™ contact, a two-piece (metal-to-metal) contac complying fully with the latest revision of MIL-E-5400, MIL-E-8189, an MIL-T-21200.

Request Catalogue BBM

PRINTED CIRCUIT CARD ENCLOSURES

The Elco VARIPAK® II enclosure is a highly versatile device for packaging printed circuit cards and connectors. Made of rugged aluminum, the Varipak can be used in storage cabinets, pull-out drawers, and even as the framework for small instrument panels. The Varipak's construction allows air flow throughout the unit, aiding in longer component life. There are 32 standard sizes available with basic parts stocked at all authorized Elco distributors.

ANGULAR AND PANEL NECTORS

full line of rack-and-panel and I/O (input/output) connectors come wide choice of styles. With standard, miniature, and even ar styles you can have from 2 up to 140 VARICON™ contacts, or ically any size in between. We've just created a family of high- ty connectors (.100″ and .125″ spacing) engineered for high relia- (including military) as well as controlled-environment applications.

est Cataloque RPM

-C-26482 -C-26500 CULAR CONNECTORS

supplies both MIL-C-26482 (Navy) and MIL-C-26500 (USAF) circular nectors. MIL-C-26482 environment-resisting, quick-disconnect connec- are equipped with solder or crimp contacts; available in a choice of shell sizes with 3 to 61 contacts. MIL-C-26500 connectors are igned to be essentially voidless in order to withstand environmental emes encountered by missiles and space vehicles. Equipped with np contacts, the connectors are available in nine shell sizes with o 61 contacts.

uest Catalogue CCM

LITARY ECIFICATION ONNECTORS

o manufactures a full line of connectors designed to and meeting ict military system specifications. Connector types are: MIL-C-21097 d MIL-C-55302 printed circuit connectors; MIL-C-12520, MIL-C-26482, L-C-26500, MIL-C-55181, MIL-C-55243, and U-344/345 power con- ctors; MIL-C-10544, MIL-C-55074, and MIL-C-55116 communications nnectors; MIL-C-23216 and MIL-C-26636 contacts.

equest Catalogue MSM

IP RANSISTOR AND UBE SOCKETS

DIP, transistor, and tube sockets; all manufactured by Elco and all exhibiting the high quality expected of an Elco product. State-of-the-art design, stringent raw material control, and advanced manufacturing techniques all contribute to the exceptional performance of Elco high-reliability sockets. See our catalogue for 14- and 16-pin DIP sockets, 7- and 9-pin tube sockets, transistor sockets, relay sockets, and crystal sockets.

Request Catalogue CSM

CONNECTOR INSTALLATION TOOLS

Elco provides all of the necessary equipment to install their connectors. Our automatic and manual contact staking tools firmly affix the contact to the printed circuit card, producing exceptional electrical as well as mechanical contact. Our automatic and manual crimping tools join contact to wire by mechanically deforming the contact around both the conductor and the insulation of the wire. All installation tools are engineered to provide long, efficient service.

If you're looking for the most complete selection of "Made in U.S.A." plugs, jacks, and components...

Write today for your free new industrial catalogue FR-70-1. Department 1D-7.

...we wrote the book on it.

PRODUCT DIVERSIFICATION — Over 10,000 electronic products are manufactured, using the latest in machinery, in our 350,000 square-foot plant in Rockford, Illinois, and warehoused in Los Angeles and New York. Electronic chemicals, hardware, tools, service aids, test equipment, antennas, phono drives, chassis punches, and audio accessories are only a few of the products numbered in GC-Electrocraft product line.

RESEARCH AND DEVELOPMENT — GC's complete facilities, highly trained and skilled personnel enable us to develop and manufacture the ultimate in precision component parts. New products are developed and introduced regularly, many just to meet industry's specifications.

GC ELECTROCRAFT COMPONENTS ARE QUALITY PRODUCTS — designed, engineered and manufactured to meet the most exacting standards. GC Electronics' over 30 years of experience in the electronics industry is your assurance of satisfaction.

EXACT SPECIFICATIONS — Electrocraft components are manufactured to meet rigid standards as well as government material product specifications. GC regularly supplies hundreds of items to Federal Stock Numbers.

GC's industrial products are available from selected industrial distributors conveniently located throughout the nation.

TERMINAL BOARDS

CR151 TYPE D ONE-PIECE BOARDS

t terminal types.
e board width — ⅞ in., 1⅛ in., 1 5/16 in.

Boards rated 15, 20, and 30 amperes with breakdown voltages of 3600, 4800, and 7500 volts, respectively.
15-amp boards available in increments of 1 through 36 points; 20-amp boards in 1 through 30 points; 30-amp boards in 1-24 points.
Terminals on 15-amp boards accept through size #14 wire; 20-amp boards through size #12 wire; 30-amp boards through size #10 wire.
Choice of marked or unmarked boards or six types of marking strips.

Write for Bulletin GEA-7317

CR151 TYPE B ONE-PIECE BOARDS

Rated 30-amperes, 600-volts for control circuits.
Available with 4-, 6-, and 12-points.
Screw, captive saddle-clamp, or screw terminals on one side, clamp terminals on the other.
Terminals accept wires through size #10.
Write-on marking strips, 15/32-in. wide, provided with boards.

CR2960 ONE-PIECE BOARDS

Control circuit boards rated 20-amperes at 600-volts; available with 4- and 6-points.

Power circuit boards rated 50-, 100-, and 150-amperes at 600-volts; available with 3 points per board.

All types have screw terminals.

Terminals accept wires through #8.

CR151 TYPE C SECTIONAL BOARDS

n be mounted directly on panel (top) or in a channel (bottom) which is then unted on panel.

nall CR151 Type C terminal boards provide two-way mount-g and assembly flexibility. When the board has been assem-ed, you can mount it directly on a panel or you can semble blocks in molded channels on applications where aximum flexibility is required. Blocks can be added after itial installation to meet increased requirements in control rcuits.

These terminal boards can be ordered in three ways: 1) as individual blocks, 2) as factory-assembled blocks without channel, 3) as factory-assembled blocks in mounting channel based on specification.
Complete line of components for customer assembly.
Choice of three 25-amp terminal types and two 50-amp terminal types.
Both boards meet IEEE switchgear standards for 750 volts.
Screw terminals accept 5/16 in. ring or spade connectors, #22 - #12 wire.
25-amp box terminals accept #18 - #8 wire; 50-amp box terminals accept #10 - #4 wire.
25-amp box clamp terminals accept #22 - #10 wire; 50-amp clamp box terminals #14 - #4 wire.
Interlocking construction . . . blocks slide together.
25-amp blocks are 1 in. high, 1⅛ in. wide; 50-amp blocks are 1 7/16 in. high, 1½ in. wide.
Easy addition of blocks provides expansion flexibility.
Panel or channel mounting.
Factory-assembled forms for direct mounting in 2 through 12 point sections for 25-amp forms and 2 through 6 for 50-amp forms; for channel mounting, 2 through 99 points.
Choice of painted surface or separate marking strip.

CR151 TYPE A SECTIONAL BOARDS

Components for customer assembly

From three basic components, you can build custom boards to meet most terminal board requirements:
- Mounting track — in lengths from 3½ to 48 inches.
- Terminal blocks — ten types are available.
- Mounting assembly kit — contains two end blocks, one standard size barrier, two nylon guide inserts, and one 16-inch marking strip.

Additional blocks or blocks with different terminals can be added to existing boards.
Ten types of terminal blocks available.
Blocks rated 25-, 50-, 125-amperes.
30-amp fuse blocks, 15-amp isolating switch blocks offered.
25-amp forms accept #16 through #10 wire; 50-amp forms accept #14 through #4 wire; 125-amp forms accept #14 through #0 wire.
Adaptor kit available for installing overload relays.
Fanning strip accessory holds wires for fast, easy connection.
Marking strip can be marked with pencil or ink; can be cut to any length required.

Factory-assembled boards

74 standard factory-assembled boards with two through 36 points are available to meet most applications. All terminals on any one board are of the same type, and all boards are complete with marking strip ready for panel mounting.

For complete information contact nearest GE Sales Office listed on inside front cover, or write to General Electric Co., Section 998-88, Schenectady, N. Y. 12305.

Glass to Metal Hermetically Sealed Connectors Headers and Feed-Thru terminals

The Glass Technology division of GULTON INDUSTRIES offers a broad line of connectors, headers and feed-thru terminals for both commercial and aerospace applications. Geared for specials as well as standards, basic designs are available with stainless or cold rolled steel shells; weld, solder, box or flange mount styles; or in custom configurations to meet individual requirements.

Typical Specifications:

Leak rate: 1.2×10^{-10}cc Helium/sec.
Vibration: 0-2,000 cps @ 100 g's rms
Operating range: —420°F to +600°F
Pressure range: to 40,000 psi
Insulation resistance: 1×10^{12} ohms @ 300°F

1. Hermetically sealed NAS and MIL type connectors
2. Sub-miniature hermetically sealed connectors
3. Low silhouette and double-start threaded hermetically sealed connectors
4. Hermetically sealed headers
5. Single and multi-pin feed-thru terminals

Gulton
GLASS TECHNOLOGY DIVISION
822 Production Place, Newport Beach, Calif. 92660

We'll bend over backwards.

Contour Cable™ happened here first. Flexible etched flat cable. Flexible flat continuous cable. Custom cable/harness assemblies. Flexibility is a thing with us.

HUGHES
HUGHES AIRCRAFT COMPANY
CONNECTING DEVICES

We're getting to be known as rounders.

We invented the BULLS-EYE Connector and created a reputation as circular subminiature specialists. Goes to show you what a little concentration can do. (Like 102 contacts in a #18 shell.)

HUGHES
HUGHES AIRCRAFT COMPANY
CONNECTING DEVICES

We've got your number.

Show us a spec, and we'll show you miniature and subminiature printed circuit connectors in 10 sizes with 10 to 96 contacts. We're good at the numbers game.

HUGHES
HUGHES AIRCRAFT COMPANY
CONNECTING DEVICES

We'll save your space.

The way we make subminiatures, they're more subminiature. More fully packed. Same contact size and spacing, only we get 110 contacts to the inch. Socket to 'em!

HUGHES
HUGHES AIRCRAFT COMPANY
CONNECTING DEVICES

The armadillo connector.

Nature gives armadillos hard-shell protection. We give it to our D series connectors. Stainless steel armor to keep 'em foolproof. They align perfectly. Fully environmental. 5 sizes. Maybe we outdo armadillos.

HUGHES
HUGHES AIRCRAFT COMPANY
CONNECTING DEVICES

Speed 'em up!

Our new Pull-Thru gun lets you pull (not push) contacts through a connector. At four times the speed. Works on many connectors. With three contact sizes. Fast? The no-holdup gun.

ITT Cannon Connector Selection Guide

This Guide is designed to help you select the proper connector series and the appropriate catalog from which to specify your connector. Below is a suggested method of selection:

INSTRUCTIONS

1. Determine your basic application requirement:
   (a) Rectangular Rack/Panel
   (b) Circular
   (c) Microminiature
   (d) Special Application Connectors

   Go to one of these four headings in the chart. Below each heading are several blocks listing the various connector series. (If a MIL Spec connector is required, turn to the back side of this Guide for the applicable catalog.)
2. Determine the required number of circuits, wire or contact size, and contact termination (solder, crimp, welded, etc.). Check these requirements with the data on the right side (dark shaded area) of each block.
3. Next, select the desired connector size, shell style or coupling method, on the left side (light shaded area) of each block.
4. Check the legend at the bottom of chart to see if environmental (symbols □ or ■) or hermetic (symbol •) requirements are satisfied.
5. Refer to the proper catalog for detailed product data and ordering information.

NOTE: For information on connectors not included in the chart, consult factory.

CANNON ITT

opular Connector Specifications

MIL-C-24308 (Navy)

This specification covers miniature rack and panel connectors, polarized shell, with non-removable solder and removable crimp type contacts in the general purpose, nonmagnetic, and hermetic (non-removable pins only) classes.

See D Catalog

NAS1599

This industry (National Aerospace Standards) specification covers threaded and bayonet coupling type, miniature circular connectors. These high performance, environment-resistant connectors use crimp removable contacts inserted, released and extracted from the termination side. Threaded connectors (KV) mate with MIL-C-26500 types; bayonet connectors (PV) mate with MIL-C-26482 types. Both connectors use NAS1600 contacts and closed-entry socket insulators.

See KV/PV Catalog

MIL-C-83723

This specification covers two families of environment-resistant connectors. The CV (MIL-C-5015-type threaded coupling) and the PV (MIL-C-26482 and NAS1599-type bayonet coupling), accommodating crimp removable, rear release contacts. The connectors are fully qualified and QPL approved under MIL-C-83723 (USAF).

Connectors

Sub-miniature, standard types

Whatever the choice . . . sub-miniature connectors for printed circuit use—or Johnson's patented "Six-Way" Binding Posts . . . time and time again design and development engineers specify Johnson connectors!

A complete line of polyamide insulated connectors are readily available to meet most military and commercial applications—included are: sub-miniatures for printed circuit applications; insulated solderless tip and banana plugs; tip and banana jacks; tip jack and sleeve assemblies; metal-clad and "rapid-mount" tip jacks; dual banana plugs and "6-way" binding posts. Available in 6 colors for coded applications, designed to operate throughout an extremely wide temperature range and under conditions of high relative humidity—voltage breakdowns available up to 11,000 volts on some types! For detailed information on the complete Johnson connector line and other Johnson electronic components—write today for our newest components catalog!

SUB-MINIATURE INSULATED CONNECTORS—Designed for printed circuit applications! Extremely compact, body is tough low-loss polyamide—resists extremes of shock, vibration, temperature and moisture. Operating voltages to 1500 volts RMS . . . 5 amperes current carrying capacity . . . contact resistance; less than 2 milliohms. Capacitance between two adjacent jacks: less than one pf. at 1 MC. 10 colors available. **Horizontal Jack**—Two sizes available. Smaller version accepts .080" dia. tip plug in either end. Larger version accepts .080" dia. tip plug in either end, top and bottom. **Vertical Jack**—Mounts through single .052" hole, requires minimum mounting area. **Sub-Miniature Tip Plug**—for use with miniature jack, .080" dia. with machined brass tip and solder lead connection. **"RIB-LOC" Terminal Design**—Single or double turret stand-offs and feed-thrus, tip jacks and tip plugs. Mount securely in .136" hole. MIL-P-20693 insulation. **New RIB-LOC tip jack**—Press-in installation. Accepts .080" tip plug in recessed, closed-entry type contact. Rated 10 amps with 8000 VDC breakdown. **Test-Point Strip/Handle**—Rapid-mounting polyamide body contains 12 test points each rated at 5 amps., maximum current capacity. Operating voltage 1500 volts RMS at seal level, 350 volts RMS at 50,000 feet. Contact resistance less than 2 milliohms.

STANDARD INSULATED CONNECTORS—A complete line of connectors molded of tough, low-loss, shock-proof polyamide in 10 colors meeting Fed. Std. 595—won't chip or crack with the hardest usage. **Tip, Banana and Dual Banana Plugs**—Metal parts nickel-plated—solderless connection up to 16 gauge wire. Current rating: 10 and 15 amps., respectively. **Tip and Banana Jacks**—molded bodies, current rating: 10 and 15 amps., respectively. Available in six types: **Standard Tip Jack**—Recessed cadmium-plated formed contact. Voltage breakdown: 9,000 volts DC; **Deluxe Tip Jack**—Recessed silver-plated machined contact. Voltage breakdown: 11,000 volts DC; **Rapid-Mount Tip Jack**—Low cost fast mounting. "Speed clip" snaps into hole, then jack is inserted. Voltage breakdown: 7,000 volts DC; **Standard Metal-clad Jack**—Nickel-plated jacket, formed silver-plated contact. Voltage breakdown: 7,000 volts DC; **Metal-Clad Tip Jack, Military**—Nickel-plated jacket, machined gold-plated beryllium copper contact. Voltage breakdown: 8,000 volts DC; **Banana Jack**—Recessed cadmium-plated insert for .175" plugs. Voltage breakdown: 12,500 volts DC. **Jack and Sleeve**—Ideal for patch cords, or insulated rear connection of panel-mounted tip jack. **Binding Posts**—Versatile "6-way" usage. Silver-plated shank, self-captivated thumb nut. Voltage breakdown: 7,000 volts DC. Current ratings: 15 and 40 amps., respectively.

E. F. JOHNSON COMPANY®
1923 Tenth Ave. S.W., Waseca, Minnesota 56093

Kulka TERMINAL BOARDS

STANDARD

410, 600, 600A, 601, 602 Series. Current range 5 thru 30 Amps; Voltage Range 1000 thru; 600 RMS; Wire sizes 20-14 Ga.; 1 thru 26 Terminals.

HEAVY DUTY

603, 604, 605 Series, Current range 50 thru 90 Amps, Voltage 1700 thru 2100 RMS; Wire Sizes #6 to 2 ga.; 1 thru 12 terminals.

SINGLE ROW

599, 699, 812 Series. Current range 15 thru 30 Amps; Voltage range 1100 thru 1600 RMS; Wire sizes: #22 to #12 ga.; 1 thru 23 terminals.

STUD and TURRET

For greater wiring convenience. Choice of terminals:

- Regular Screw Type
- Solder Turret • Feedthru
- Threaded Stud, etc.

Also, choice of finishes: electro-tinned, silver-plated, even gold over silver. design facilities are available for your special requirements.

"KLIPTITE"

For fast connect and disconnect. Available on Kulka's full line of terminal boards.

- Just clip on wire terminal fast for tight connection.
- Up to 6 connections per stage.
- Vari-angled tabs.
- Available rivetted to terminal hardware or with screw assembly.

PRESSURE CONTACT

9-85 SERIES

Ideal for power equipment. One-piece molded plastic for industrial or military use. Extra-safe, completely enclosed. 2 to 12 terminals. Rated at 85 Amps, 8000 Volts.

MILITARY BOARDS

Per MIL-T-16784B

Designed by the Bureau of Ships according to MIL-T-16784B, superseding MIL-T-16784A (Ships). They are made to BUSHIPS 9000-S6505-73214 drawings, with the latest revisions, and BUORD S64101.

MOLDED MATERIAL: MAI-60, in accordance with MIL-M-14F.

MILITARY BOARDS

SOLID BACK

MADE to MEET or EXCEED

MIL-T-55164

Molded-in Terminals. Equal molded sections. Kulka improved design, for weight saving, greater strength, flexibility. All sizes available, classes 37TB thru 42TB.

CLOSED BACK TERMINAL BOARDS

670, 670A, 671, 672 Series. Current range 15 to 30 Amps, Voltage range 2500 to 3300 Volts RMS. Wire sizes #22 thru #12 ga.; 1 thru 30 terminals.

HIGH HEAT

1215 SERIES

For temperatures up to 850°. Made in two and three terminal units with incremental configuration. Stainless steel stud type terminals.

TOGGLE SWITCHES

Made to Military Specifications: JAN-S-23, MIL-S-21195, MIL-S-6745 and MIL-S-3950B. Available in SPST, SPDT, DPST and DPDT types. DA and AC up to 1600 cps. Your choice of terminals: Screw, solder or tab.

Also, MINIATURE, SUBMINIATURE, TAPER PIN, PRINTED CIRCUIT, WIRE-WRAP, SCREW CLAMP TERMINAL BOARDS AND ACCESSORIES. Available in a variety of Military and Commercial Grade materials.

KULKA COMPLETE TERMINAL BOARD CATALOG 17B ON REQUEST

KINGS

K-GRIP JR.™ CONNECTORS

Almost 50% smaller, 50% lighter, K-Grip Jr. is the design answe to better RF connectors. A three-piece configuration, it is a crimp-pe version of Kings standard RF connector reduced to its simplest fo

FEATURES:

- Superior Strength . . . pull-out resistance unequalled by any other crimp-type connecnector in the industry.
- Uniform, Rapid Handling . . . connector-to-cable attachment reduced to a minimum — with exacting uniformity from unit to unit.
- Foolproof Assembly . . . Snug-fit design requires no highly skilled personnel.
- Broad Application Capability — Available in all standard connector types for RG-174 through RG-214.

Kings K-Grip Jr. Connectors are available in two tarnish-resistant finishes — a TR-4™, used over silver plating; or the TR-5™, a more durable, brilliant alloy finish.

CABLE RETENTION METHOD

The K-Grip Jr. cabling procedure is as follows — After the braid has been trimmed, the K-Grip is inserted between the dielectric and braid. The K-Grip sleeve is slid over the braid and crimped in place. K-Grip, thus eliminates the time consuming braid combing operation and results in a stronger connection.
For precise easy cabl e trimming, the use of Kings jacket and dielectric trim jigs is recommended.

JACKET TRIM—JIG (KTJ) CP-200A & CP-400 (Patent Pending)

Used for making cuts 1 and 2 in the cabling procedure.

DIELECTRIC TRIM—JIG (KTD) CP-200A (Patent Pending)

Used for trimming dielectric in the cabling procedure.

HAND CRIMP TOOL . . . KTH-1000

With removable dies — accommodates all die sizes.

Crimping of contacts and K-Grip Jr.™ may be easily and reliably accomplished by the use of Kings special crimping tools.

*TR-5 FINISH

CHARACTERISTICS

- Small, lightweight, bayonet coupling
- Used with small diameter RF cables
- Beryllium copper outer contacts
- Nominal 50 ohm impedance
- Excellent electrical performance from DC through X-Band
- Tested at 1500 volts RMS
- Teflon insulated

CHARACTERISTICS

- Positive locking thread-type coupling
- Withstands extreme vibration and shock
- Used with small diameter RF cables
- Beryllium copper outer contacts
- Nominal 50 ohm impedance
- Excellent electrical performance from DC through X-Band
- Tested at 1500 volts RMS
- Low noise level
- Teflon insulated

MAGSTRIP®

LOW COST RESILIENT BARRIER STRIPS

★ Eliminate barrier breakage ★ Eliminate screw shake-outs (Factory pre-assembly w/captive screws) ★ Eliminate special lugs (Magstrip accepts standard 5/16"-wide lugs) ★ Eliminate wire crimping entirely (w/wire-retaining plates) ★ Use less strip space for same number of terminals ★ Get full 7/16" (20-amp) rating capacity and #6 screws on 3/8" centers ★ Use higher, unbreakable barriers for full 300-V rating ★ Choose a modern insulating material that best fits your application ★ Use colored strips for product dress-up or function definition ★ Cut down on special orders (Magstrip is stocked in all combinations)

3 DIFFERENT MATERIALS, 4 DIFFERENT COLORS, ANY HARDWARE COMBINATION—*ALWAYS IN STOCK*

STRIP MATERIAL: Polycarbonate (shatterproof), Polysulfone (high heat resistance), or Polystyrene (low cost)

STRIP CONFIGURATION: Flat base, or self-insulating feed-thru

STRIP COLORS: Black, blue, red or gray (and others on special order, including transparent)

HARDWARE: TOP—Wire-retainer plates and captive panhead screws, in either nickel plated brass or steel; or binding screws only, in brass or steel (All screws, #6) BASE—Either std. solder connectors, or circuit board pins.

MAGSTRIP® ORDERING

On each order, write *Catalog Number* . . . plus numerical suffix specifying terminal *positions-per-strip* (Max.-30) . . . plus *Strip Material* specification ("CB"—Polycarbonate, "PS"—Polysulfone, or "ST"—Polystyrene) . . . plus strip color (Black. red, blue or gray)

CATALOG NUMBER	DESCRIPTION			PRICING*	
	Base	Base Hardware	Top Hardware	Fixed Price per strip	Add p terminal posit
2120	Flat	Standard solder connector	Steel binding screw	$ .10	$ .129
2140	"	"	Brass binding screw	.10	.138
2160	"	"	Steel panhead screw & wire-retainer	.10	.147
2180	"	"	Brass panhead screw & wire-retainer	.10	.159
2220	"	Circuit board pin	Steel binding screw	.10	.124
2240	"	"	Brass binding screw	.10	.133
2260	"	"	Steel panhead screw & wire-retainer	.10	.142
2280	"	"	Brass panhead screw & wire-retainer	.10	.154
2320	Insulating feed-thru	Standard solder connector	Steel binding screw	.15	.135
2340	"	"	Brass binding screw	.15	.144
2360	"	"	Steel panhead screw & wire-retainer	.15	.153
2380	"	"	Brass panhead screw & wire-retainer	.15	.165

*Above pricing is for *Polycarbonate* ("CB") strip material. For *Polystyrene* SUBTRACT $.02 terminal position. For *Polysulfone* ADD $.03 per terminal position.
EXAMPLE: 2120—"ST"—8—BLACK specifies black polystyrene strip with 8 terminal positions flat base and steel binding screw. Pricing: .10 + (8 X .129) − (8 X .02) = .97

QUANTITY PRICING: 1 to 99 terminal strips—List Price
100 to 999—30% off list
1000 to 9999—50% off list
10,000 & up—55% off list

MAGTERM®

THE INDEPENDENT PERIMETER TERMINALS

THEY WORK WITHOUT TERMINAL STRIPS

Fasten directly onto perimeter of circuit board. Save space and cost wherever you don't need the insulation of barrier strips. Snap-on (w/captive screws) or bolt-on design. Simple, quick installation. Brass conductive elements, nickel plated. Made to fit boards 1/16", 3/32" or 1/8" thick. Full 20-amp. rating.

MAGTERM® ORDERING

ON EACH ORDER, 3 SPECIFICATIONS:

1. **CATALOG NUMBER**—For board thickness and locator pin
2. **SUFFIX "A"**—For Steel Binding Screw
   SUFFIX "B"—For Brass Binding Screw
   SUFFIX "C"—For Steel Panhead Screw with wire-retainer plate
   SUFFIX "D"—For Brass Panhead Screw with wire-retainer plate
3. **SUFFIX "Z"**—For preassembled terminals (captive screws)
   SUFFIX "K"—For disassembled terminals

EXAMPLE: 6101-A-Z

QUANTITY PRICING: 1 to 99 terminals—List Price
100 to 999 terminals—30% off list
1000 to 9999 terminals—50% off list
10,000 & up terminals—55% off list

*Terminals 6102, 6112, 6103, 6113 are subject to special low-quantity pricing. On these items, *consult factory before ordering.*

CATALOG NUMBER	Board Thickness	Locator Pin	LIST PRICE PER TERMINAL

MALCO

ELECTRONIC TERMINALS AND CONNECTORS

UICK-CONNECT RECEPTACLES:
large family of female receptacles for quick-connect male rminals supplied in chain style for automatic crimping. hese terminals are available for round, square or rectangular ale pins or blades. Terminals crimp to wires from 27-AWG 16-AWG. REQUEST BULLETIN NO. 611.

- Terminals produced by high-speed production equipment insure highest quality at lowest prices.
- Chain style terminals may be applied by Malcomatic Machines for lowest possible assembly costs.
- Precision tooling and rigid quality control assure products that meet or exceed industry specifications—consistently.
- Most complete line of circuit hardware and small stampings available for Radio-TV, Electrical and Electronic, Communications, Automotive and Aviation Industries.
- Prompt delivery on over 2,000 different parts.
- Full staff of Malco engineers to solve customer application and design problems.

SOLDERLESS TERMINALS:
Broad range of sizes and types. Available insulated (straight or flared entry) or non-insulated. Made of pure soft copper with special internally serrated barrels for maximum crimp reliability. Full range from AWG 22 to AWG 10. REQUEST BULLETIN NO. 617.

PRINTED CIRCUIT HARDWARE:
Feed-Thru Terminals in chain style for automatic insertion n P. C. Cards. Available in a full range of sizes in "Wrap-A-Wire" or round pin styles. Interlock pin, "Wrap-A-Wire" and quick-connect tab lugs for edge-board or terminal strip applications. Spring clips for shielding cans. REQUEST BULLETIN No. 691.

ELECTRONIC HARDWARE:
Socket and connector hardware, soldering and non-soldering terminals, quick-connect lugs. Phono plug and receptacle hardware, P. C. brackets and binding posts. REQUEST BULLETIN NO. 10.

RING AND SPADE TERMINALS:
In chain style, applied by Malcomatic equipment. Available in a variety of sizes and types: hook, ring, spade, flag, either wire/insulation crimp or insulation-pierce crimp. Also, cord clamps for strain relief applications. REQUEST BULLETIN NO. 605.

The Wrapost Aluminum Systems Panel (WASP) Connector was developed by Malco Manufacturing Company, Inc. to provide a modular, multi-function connector to systems designers. By using standard connector terminals and insulators within a custom metal chassis, connectors for the first time can be economically fitted to the circuit rather than the conventional method of fitting the circuit to the connector.

WASP—The "Wasp" Connector is a heavy duty blade/fork combination with .045" square wrap tails for automatic machine terminations. This line features the broadest range of connector terminal variations in the industry. Available in .125" thick aluminum plates up to 24"x 24" with terminals on. 200" square or offset patterns. REQUEST BULLETIN NO. 631.

MINI-WASP—This line is a miniature version of the "Wasp" Connector. It is available in .080" aluminum plates on .100", .125" or .150" square or offset patterns. Terminals are high-reliability blade/fork type with .025" square wrap tails. The "Mini-Wasp" Connector Line features ground connectors as well as insulated connectors in the same manner as the "Wasp" line. Thus, the aluminum plate becomes a complete ground plane. REQUEST BULLETIN NO. 647.

CARDEC 200—The Cardec 200 Card Edge Plate Connector System is designed for direct entry P. C. card applications. The Cardec 200 version accepts 1/16" printed circuit cards with contacts on .200" centers with .045" square wrap tails. This connector system features the ground plane concept and modular construction of the "Wasp" Connector line while affording the economy of edge connector systems. REQUEST BULLETIN NO. 681.

CARDEC 125—Cardec 125 is a modular card edge connector system with contacts on .125" centers for maximum packaging density (.047" cards on solid .250" centers). In addition to the features of Cardec 200, this system offers printed circuit card voltage bus hardware for low resistance voltage distribution. As with all the Malco Plate Connector lines, Cardec 125 is supplied in your configuration completely assembled and ready for automatic wire-wrapping right out of the package. REQUEST BULLETIN NO. 681.

PRECISION ELECTRONIC TERMINALS AND CONNECTORS

MATRIX D SUB-MINIATURE RACK & PANEL CONNECTORS TO MIL-C-2430

Matrix MD series general purpose connectors are used in applications where small size, light weight and reliability are demanded. They feature six 20 crimp contacts* that are inserted from the rear, released from the rear and removed from the rear. They meet the specifications of MIL-C-24308.

The gold-plated Matrix MD contacts may be crimped to wire sizes 20, 22 or 24 with standard MS tools, and are quickly and easily inserted into correct position. They are held in position by high strength self-locking retainers, and are simply released from the rear with a non-conductive plastic tool which cannot damage the contact retainer.

The insulators in the Matrix MD series are of glass filled diallyl phthalate for highest mechanical and electrical strength. The socket contact apertures are chamfered at the interface to provide fail safe lead-in of pin contacts. Circuit identification is clearly printed in white on the face and rear of each black green insulator. The yellow chromate finished cadmium plated steel shells incorporate mounting ears, and provide keystone polarization for each of the models.

**Matrix MD 308 crimp contacts conform to the dimensional and material requirements of MS 18281, and may be used with other MIL-C-2308 connectors. These contacts may be purchased separately from Matrix Science in production quantities.*

FEATURES OF THE MD 308

1. Crimp or Solder Contacts
2. Standard or Float Mounts
3. The Most Superior Solder Socket Design Available
4. Non-Magnetic Shells
5. Intermateable and Intermountable With Existing D Subminiature Connectors Per MIL-C-24308
6. Shell Sizes Of 9, 15, 25, 37, 50
7. Instant Delivery
8. A Nationwide Stocking Distributor Program

MD308 G F —25 P 1 ***NUMBER SYSTEM

- **Connector modification** (Consult factory)
- **Type of contact.** 1 designates solder. 2 designates crimp.
- **Mating half of connector.** P designates with pin contacts. S designates with socket contacts.
- **Contact arrangement and model.** 09 for 9 contact model. 15 for 15 contact model. 25 for 25 contact model. 37 for 37 contact model. 50 for 50 contact model.
- **"F" (if specified) = Floating mount shells**
- **Class designation.** G for general purpose connectors with steel shells. N for non-magnetic connectors with gold plated brass shells and Beryllium Copper socket contact sleeves.
- **Series prefix.**

PERFORMANCE SPECIFICATIONS:

VOLTAGE RATING
Sea Level: 1,000 VAC
At 70,000 Feet: 325 VAC

CURRENT RATING
Size 20 contacts: 7.5 amperes, max.

CONTACT RETENTION STRENGTH
Contact will not pull out upon application of 10 pounds force in the direction of mating forces.

CONTACT DURABILITY
No mechanical or electrical defects harmful to the operation of the connector after 500 cycles of engagement and disengagement, per MIL-C-24308, Para. 3.5.10.

CONTACT ENGAGEMENT & SEPARATION FORCE
Minimum: .50 ounces (with minimum dia. pin)
Maximum: 12.0 ounces (with minimum dia. pin)

OPERATING TEMPERATURE RANGE
—67°F to 257°F

VIBRATION RESISTANCE
No interruption of electrical continuity longer than 1 microsecond. Per MIL-STD 202, method 204, condition D.

PHYSICAL SHOCK RESISTANCE
No damage or interruption of electrical conductivity longer than 1 microsecond. Per MIL-STD 202, method 213, condition G.

FACE VIEW OF PIN INSERTS (LAYOUTS)

MINI-MATE SUBMINIATURE ELECTRICAL CONNECTORS

MINI-MATE ASSEMBLY TOOLS
Contact insertion tool, model 90-0001-022
Contact removal tool, model 90-0002-022

FEATURES:

- ☐ Shortest and lightest subminiature connector available in today's market.
- ☐ Up to 85, low millivolt drop, removable crimp contacts on .080" centers in ⅓ the space and with ¼ the weight of miniature types.
- ☐ Simple, reliable assembly
  - Rear insertion of contacts
  - Front release
  - Rear removal
- ☐ Positive lock bayonet coupling.
- ☐ Low Engagement force.
- ☐ Electrical contact after only .020" penetration.
- ☐ Probe proof closed entry sockets.
- ☐ High performance silicone grommets and interfacial seals for environmental immunity.
- ☐ 5 key polarization.
- ☐ Hard chrome or black anodize finish.
- ☐ Uses standard crimp tool (MS-3191).
- ☐ Meets or exceeds applicable sections of MIL-C-26482, MIL-C-81511, MIL-C-38999 and NAS-1599.
- ☐ Receptacles available with glass dielectrics for hermetically sealed applications.

TRIX TERMINAL JUNCTION SYSTEMS DESIGNED TO MIL-T-81714

THE TRIX MODULE

The trix Module is the basis of a new generation of interconnection system ents introduced by Matrix Science Corporation in 1963. The device is the ment in a method of interconnecting an unlimited number of wires. The it of a now large group of connection devices using the same concept is TRIX TERMINAL BLOCK. The Terminal Block was the first of these modular and its fundamental concepts have been used in most products now avail- is a female contact socket housed in a plastic body which incorporates a king retainer to hold the male member solidly in place. This device fea- losed entry."

he male contact is pushed into position with a non-conductive tool, this produces the vitally important wiping action between male and female contact surfaces which improves con tion integrity.

er step to protect the environmental immunity of the connection is d by the addition of resilient sealing glands around all wire entries. an optional part of most Matrix Modules.

st Terminal Block had eight female contacts which were all connected to on bus plate. Split-bus units followed to provide a variety of common con- patterns within a single block.

al progression of product development provided means by which the al Blocks became modules of multi-unit assemblies. Any number may be ed to provide connection and interconnection for an unlimited number s.

parent advantages of the Terminal Block method of making connections weight and space savings, plus connections that are inherently more re- than open connections tied to terminal strips and similar devices. The nportant improvement, though, is a marked increase in design and applica- exibility early users found in their change to this simplified interconnection method. Because the wire termination employed requires tooling and procedures identical to those for connector pins and sockets, and because the termination can be attached to a broad range of wire sizes, the Matrix Module has been found to provide a fully compatible interconnection system.

GENERAL DESCRIPTION TERMINAL BLOCKS, FEEDTHRU BLOCKS AND PROGRAMMING BLOCKS

Terminal Blocks — Matrix Terminal Blocks are used for general purpose interconnection and bussing. They are available in four sizes, the larger of which accommodates AWG 12 thru AWG 14 wires, and smaller sizes with which wires AWG 16 thru 26 may be used. Aluminum rails and end brackets with alpha coding for each connection point are used to mount the blocks and form multi-block assemblies.

Feedthru Blocks — Matrix Feedthru Blocks are for general purpose interconnection and bussing in applications where circuit wiring must be connected to two sides of a panel, bulkhead or patchboard. The same crimp-type male contacts used for wire termination and connection to Terminal Blocks are used for Feedthru Blocks as well as the Programming Blocks shown below. Aluminum rails and end brackets with alpha coding are used for mounting these modules, and for forming multi-block assemblies.

Programming Blocks — Matrix Programming Blocks are feedthru blocks whose connection points on one end do not include the self-locking retainers used in the other blocks. Male contacts may be plugged-in and removed from these points without tools while connections at opposing points on the blocks remain locked in place. These blocks are used in patch-boarding and similar applications (MTB Series only).

MATRIX DOUBLE CONTACT-D

DOUBLE CONTACT RACK & PANEL or CABLE CONNECTOR

If you have the "out-of-space and overweight" miseries and your wire count is going up . . . there is remedy close at hand. As close as your nearest phone.

MATRIX has packed twice the number of contacts in their Standard D shell—without fudging on reliability features. In fact, some "firsts" have been added:

Standard-machined, crimp, removable contacts on .075 centers with split-tine locking feature.
15 Lb. contact retention in a diallylphthalate insulator.

Sockets have unique, hooded, closed entry feature.

Interfacial, moisture seal.

SHELL DIMENSIONS

MATERIALS & SPECIFICATIONS

Shell: Steel, cadmium/iridite, QQ-P-416 Type II, Class 2
Insulator: Diallyl phthalate, SDG-F per MIL-M-14
#22 Contacts: Pin—Copper alloy
Socket—Copper alloy
Socket hood—Stainless steel
Contact plating: Gold (.00010) over copper flash, MIL-G45204, Type II, Class 2
Contact retention clip—Copper alloy
Interfacial seal: Silicone per MIL-STD-417 TA-505

PART NUMBER

MD308 G F 9-19 P 2

- **Type of contact** 2 designates crimp
- P designates pin contacts; S designates socket contacts
- **Insert Arrangement**
  - 9-19 19 contacts
  - 15-31 31 contacts
  - 25-52 52 contacts
  - 37-79 79 contacts
  - 50-100 100 contacts
- F for float mounts
- **Class designation** G for general purpose connectors with steel shells; N for non-magnetic
- **Series prefix**

PERFORMANCE

Current: 5 amps
Voltage: sea level — 1000 VRMS
70,000 Ft. — 250 VRMS
Contact retention: 15 pounds axial load
Durability: No mechanical or electrical defects after 500 cycles of engagement and disengagement
Contact engagement and separation force: Minimum: .5 ounces (with minimum .029 dia pin)
Maximum: 6.0 ounces (with maximum .031 dia pin)
Thermal Shock: −67 F to 257 F
Vibration resistance: No interruption of electrical continuity longer than 1 microsecond (MIL-STD-202, method 204, condition C)
Shock resistance: No damage or interruption of electrical continuity longer than 1 microsecond (MIL-STD-202, method 202)

NOTE: Rear of connectors should be potted to assure environmental performance.
When using as an in-line, cable connector — and positive locking is required — use Matrix part numbers MD 308G-014 and MD 308G-001 screw lock assemblies.

ASSEMBLY TOOLS:

Crimp tool: MS 3198-1 with A-101 locator (Daniels)
Contact insertion tool: Matrix #90-0001-022
Contact removal tool: Matrix #90-0002-022

mueller clips

THE WORLD'S LARGEST AND ONLY COMPLETE LINE

MANUFACTURED FOR GENERAL SALE SINCE 1908

• AVAILABLE AT JOBBERS everywhere •

"WE BEGIN WHERE THE WIRE ENDS"

(For detailed information, refer to the Mueller Clip pages in the "Radio Electronic Master.")

IN UNIVERSAL USE FOR ALL KINDS OF QUICK, TEMPORARY ELECTRICAL CONNECTIONS. PLATED STEEL AND SOLID COPPER. INSULATORS IN STANDARD RED AND BLACK, AND IN SPECIAL COLORS — WHITE, BLUE, YELLOW AND GREEN.

"Mini-gator" and "Micro-gator" clips to fit the smallest crevices in tightly compacted equipment. Separate insulators for skin-tight, complete insulation.

Alligator Clips, including completely insulated model.

Crocodile Clips. (Nesting teeth.)

"Pee Wee" Clips, including completely non-ferrous type.

General purpose test clips with meshing teeth.

Needle Clips — Twin Clip — Geophone Clips.

Clips for Battery Booster Cables and Chargers.

Heavy duty Test and Battery Clips.

Large welding ground clamps.

Appliance ground clamps.

Separate flexible insulators.

NO. 123 DISPLAY-SELECTOR BOARD, a permanent, gloss-finish board of our entire line. Shipped complete, set up, with items in place over their printed code numbers. We absorb much of the cost, charging only $10.00 net postpaid in order to provide a unit which solves all quick-testing and clip-terminal problems for engineering and design departments, manufacturers and laboratories. Order direct from factory.

¾" SPACED MOLDED BANANA PLUGS

General Specifications listed below apply to items using banana plugs in this catalog.

FEATURES . . .

- One piece beryllium copper heat treated spring for maximum long life.
- Rounded spring design results in maximum contact area.
- STACK-UP feature allows an unlimited number of connections at the same electrical point.
- Tough thermoplastic molded directly on to the metal body of the plugs and connectors.

SPECIFICATIONS . . .

- Fits standard 0.166 dia. banana jacks.
- Spring, beryllium copper alloy 170 per QQ-C-533.
- Plug body, Brass per QQ-B-626. Comp. 22.
- Nickel plated per QQ-N-290, Class 2.
- Contact resistance less than 0.001 ohms per banana plug.

RATINGS	Models: MDP; MDP-ST; 1330; 1330-ST; 2970
Capacity :	0.8 pf to 10 MC
Current :	15 Amps. Cont., 30 Amps. Int.
Voltage :	5000 W.V. D.C.
Temperature :	—25°C to +85°C, operating temp.

ACTUAL SIZE

DOUBLE BANANA PLUG

Double banana plug on ¾" centers; set screws secure leads; simplifies cable construction or component mounting; banana jacks permit top Stack-Up for multiple connections.

COLORS: Black, Brown, Red, Orange, Yellow, Green, Blue, Violet, Gray, White.

MODEL MDP (Specify Color) QUANTITY DISC. CODE (A) **NET .75**

COMPONENT MOUNTING DOUBLE BANANA PLU

Double banana plug on ¾" centers; set screw secure leads; features recess for mounting sma components; banana jacks permit top Stack-U for multiple connections.

COLORS: Black, Red

MODEL 1330 (Specify Color) QUANTITY DISC. CODE (A) **NET .7**

DOUBLE BANANA PLUG WITH SOLDER TURRET TERMINALS

Similar to Model MDP, except has solder turret terminals for permanent noise-free connections of cables and components. Double banana plug on ¾" centers; banana jacks permit top Stack-Up for multiple connections.

COLOR: Black

MODEL MDP-ST QUANTITY DISC. CODE (A) **NET .95**

COMPONENT PLUG WITH SOLDE TURRET TERMINALS

Similar to Model 1330, except has solder turr terminals for permanent noise-free connectior of components, etc. Double banana plug on ¾ centers: Banana jacks permit top Stack-Up fo multiple connections.

COLORS: Black, Red.

MODEL 1330-ST (Specify Color) QUANTITY DISC. CODE (A) **NET .9**

TRIPLE BANANA PLUG

Triple banana plug on ¾" centers; set screws secure leads. Ideal for balanced line 2 conductor shielded cable assemblies. Banana jacks permit top Stack-up for multiple connections.

COLORS: Black, Red.

MODEL 2970 (Specify Color) QUANTITY DISC. CODE (A) **NET 1.25**

BINDING POSTS TO TRIPLE BANANA PLUG

Features insulated binding posts on ¾" center for rapid mounting and interchangeability o components. Binding posts allow top Stack Up for multiple connections. Side Stack-Up provided by thru-holes in plug body.

UPPER: Insulated Triple binding posts, on ¾" centers. Cross holed (.166 dia.) in body provide side Stack-Up connections.

LOWER: Triple banana plug, on ¾" centers.

COLORS: Body, Black. Binding Posts, Red/ Black/Black.

MODEL 3405 QUANTITY DISC. CODE (A) **NET 4.50**

POMONA ELECTRONICS

BANANA PLUG ACCESSORIES

SOLDERLESS BANANA PLUG—STACK-UP

Wire firmly held in place with internal set screw, eliminating soldering. Assembly of test leads simplified.
UPPER: Banana jack, .171 dia.; Brass, nickel plated.
LOWER: Banana plug, one piece nickel plated beryllium copper spring for use with standard 0.166 dia. banana jack.
COLORS: Black, Brown, Red, Orange, Yellow, Green, Blue, Violet, Gray, White.

MODEL 1325 (Specify color) QUANTITY DISC. CODE (A) **NET .50**

SOLDERLESS BANANA PLUG WITH SAFETY COLLAR—STACK-UP

Features: Integral safety collar insulates exposed wire leads. Wire firmly held in place with internal set screw, eliminating soldering. Assembly of test leads simplified.
UPPER: Banana jack, .166 dia.; Brass, nickel plated.
LOWER: Banana plug, one piece nickel plated beryllium copper spring for use with standard 0.166 dia. banana jack.
COLORS: Black, Brown, Red, Orange, Yellow, Green, Blue, Violet, Gray, White.

MODEL 1825 (Specify Color) QUANTITY DISC. CODE (A) **NET .50**

BINDING POSTS TO DOUBLE BANANA PLUG

Features insulated binding posts on ¾″ centers for rapid mounting and interchangeability of components. Binding posts allow top Stack-Up for multiple connections. Side Stack-Up provided by thru-holes in plug body.
UPPER: Insulated double binding posts, on ¾″ centers. Cross holes (.166 dia.) in body provide side Stack-Up connections.
LOWER: Double banana plug, on ¾″ centers.
COLORS: Body, Black. Binding Posts, Black/Red.

MODEL 1286 QUANTITY DISC. CODE (A) **NET 2.50**

BINDING POST TO SINGLE BANANA PLUG

Features insulated binding post. Binding post allows top Stack-Up for multiple connections. Side Stack-Up provided by thru-hole in plug body.
UPPER: Insulated binding post. Cross hole (.166 dia.) in body provides side Stack-Up connections.
LOWER: Single banana plug, one piece nickel plated beryllium copper spring for use with standard 0.166 dia. banana jack.
COLORS: Black, Red.

MODEL 2894 (Specify color) QUANTITY DISC. CODE (A) **NET 1.50**

METAL SHORTING BAR

Low profile, nickel plated brass shorting bar. Double banana plugs on ¾″ centers swaged to 3/32″ thick brass bar. Resistance, less than 1.5 milliohms installed. Current rating: 15 Amps. Cont., 30 Amps. Int.

MODEL 1855 QUANTITY DISC. CODE (A) **NET .85**

INSULATED SHORTING BAR

Ideal as a connecting link for use with ¾″ spaced banana jacks. Banana plugs internally solder-bonded with #14 AWG wire. Banana jacks provide top Stack-Up. Cross holes (.166 dia.) in body provide side Stack-Up connections. Resistance less than 1.5 milliohms installed. Current rating 15 Amps. Cont., 30 Amps. Int. "Shorting Bar" marked on top of plug.
COLORS: Natural, Black, Red.

MODEL MDP-S (Specify Color) QUANTITY DISC. CODE (A) **NET 1.25**

MOLDED PRECISION RESISTOR

Ideal where rapid interchange of resistance values is required. Used in breadboarding, R & D labs., Standards, Terminations, etc. Deposited carbon 1% resistor, ½ watt, molded internally. Resistor soldered to double banana plug, on ¾″ centers. Top Stack-Up provided for multiple connections. Cross holes (.166 dia.) in body provide side Stack-Up connections. Resistance value stamped on top of plug.

(OHMS)

	150	900	50K		

MODEL MDP-R (Specify Value) QUANTITY DISC. CODE (A) **NET 2.95**

ADAPTER—.080 TIP JACKS TO DOUBLE BANANA PLUG

Permits .080 Tip plugs to be used with equipment having banana jacks.
UPPER: Tip jacks, beryllium copper, gold flashed; spaced on ¾″ centers to accept .080 dia. pin tip plugs.
LOWER: Double banana plug, on ¾″ centers, nickel plated. Cross holes (.166 dia.) in body provide side Stack-Up connections.
COLOR: Black.

MODEL 1845 QUANTITY DISC. CODE (A) **NET .95**

DOUBLE BANANA PLUG SPLICE

Provides rapid method for splicing cables. Reduces necessity of storing extra long cables. Molded thermoplastic body eliminates shock hazard by completely enclosing banana plug contact. Brass, nickel plated banana jacks. .166 dia., on ¾″ centers.
COLORS: Black, Red.

MODEL 1823 (Specify color) QUANTITY DISC. CODE (A) **NET .50**

SINGLE BANANA PLUG SPLICE

Provides rapid method for splicing single banana plug patch cords. Reduces the necessity of storing extra long patch cords. Molded thermo-plastic body eliminates shock hazard by completely enclosing banana plug contact. Brass, nickel plated banana jack, .166 dia.
COLORS: Black, Red.
Standard Package: 10 (per color)

MODEL 1829 (Specify color) QUANTITY DISC. CODE (A) **NET .25 ea.**

POMONA ELECTRONICS

.080 PIN TIP PLUG ACCESSORIES

COMPONENT MOUNTING — TIP JACKS TO DOUBLE PIN TIP PLUG — SET SCREWS

Features set screws on side of body to secure leads or components. Recess permits mounting of small component parts.
UPPER: Tip jacks, beryllium copper, gold flashed, spaced on ¾" centers, to accept .080 dia. pin tip plugs.
LOWER: Pin tips, .080 dia. on ¾" centers. Brass, nickel plated.
COLORS: Black, Red.

MODEL 2192 (Specify color) QUANTITY DISC. CODE (A) **NET 1.85**

COMPONENT MOUNTING PLUG— BANANA JACKS TO DOUBLE PIN TIP —SET SCREWS

Permits single or double banana plugs to be used in equipment having tip jacks. Features recess for component mounting. Internal set screws firmly secure wire leads.
UPPER: Banana jacks, .166 dia., on ¾" centers. Brass, nickel plated.
LOWER: Pin tips .080 dia. on ¾" centers. Brass, nickel plated.
COLOR: Black.

MODEL 1858 QUANTITY DISC. CODE (A) **NET .75**

PLUG — COMPONENT MOUNTING — DOUBLE PIN TIP PLUG—SOLDER TURRETS

Features recess for mounting components. Gold flashed solder turrent terminals for permanent noise-free connections.
UPPER: Tip jacks, beryllium copper, gold flashed; spaced on ¾" centers to accept .080 dia. pin tip plugs.
LOWER: Pin tips, .080 dia. brass, nickel plated.
COLORS: Black, Red.

MODEL 1904 (Specify color) QUANTITY DISC. CODE (A) **NET 1.10**

INSULATED SHORTING BAR

Used as a connecting link with equipment having tip jacks. Plugs internally solder bonded with 14 AWG wire. Top stack-up feature.
Current rating: 5 AMPS. cont., 10 AMPS. int. "Shorting Bar" marked on top of plug.
UPPER: Banana jacks, .166 dia. on ¾" centers. Brass, nickel plated.
LOWER: Pin tips, .080 dia. on ¾" centers. Brass, nickel plated. Cross holes (.166 dia.) in body provide side Stack-Up connections.
COLORS: Black, Red.

MODEL 1730 (Specify color) QUANTITY DISC. CODE (A) **NET 1.25**

METAL SHORTING BAR

Used as a connecting link with equipment having tip jacks. Low profile, nickel plated brass shorting bar. Double pin tip plugs on ¾" centers swaged to 3/32" thick brass bar.
RESISTANCE: Less than 1.5 milliohms installed.
CURRENT RATING: 5 Amps Cont., 10 Amps Int.

MODEL 2072 QUANTITY DISC. CODE (A) **NET .85**

BINDING POSTS TO DOUBLE PIN TIP PLUG

Features insulated binding posts on ¾" c ers for rapid mounting and interchangeability o m- ponents. Binding posts allow top Stack-U for multiple connections. Side Stack-Up provid by thru-holes in plug body.
UPPER: Insulated double binding posts on ¾ en ters. Top and side stack-up connectors (.166 a.) Cross holes (.166 dia.) in body provide side ck- Up connections.
LOWER: Pin tips, .080 dia. on ¾" centers. ss, nickel plated.
COLORS: Body, Black, Binding Posts, Black/R

MODEL 2978 QUANTITY DISC. CODE (A) **NET 2.5**

BINDING POST TO SINGLE PIN TIP PLUG

Features insulated binding post. Binding pos t- lows top Stack-Up for multiple connections. e Stack-Up provided by thru-holes in plug body.
UPPER: Insulated binding post. Top and side S k- Up connectors (.166 dia.). Cross hole (.166 dia in body provide side Stack-Up connections.
LOWER: Pin tip, .080 dia. brass, nickel plated
COLORS: Black, Red.

MODEL 2953 (Specify color) QUANTITY DISC. CODE (A) **NET 1.5**

SOLDERLESS PIN TIP PLUG—STACK-U

Wire firmly held in place with internal set screw, el- inating soldering. Assembly of test leads simplifie
UPPER: Tip jack, beryllium copper, gold flashed; cepts .080 dia. pin.
LOWER: Pin tip, .080 dia., brass, nickel plated.
COLORS: Black, Red.

MODEL 1922 (Specify color) QUANTITY DISC. CODE (A) **NET .9**

ADAPTER — BANANA JACK TO PIN TIP

Permits standard single banana plug patch co to be used with equipment having tip jacks.
UPPER: Banana jack, .166 dia. Brass, nic plated.
LOWER: Pin tip, .080 dia. Brass, nickel plat Cross hole (.166 dia.) in body provides side Sta Up connection.
COLORS: Black, Red.

Standard Packag 10 (per colo

MODEL 1432 (Specify Color) QUANTITY DISC. CODE (A) **NET .20 e**

ADAPTER — .080 TIP JACK TO BANANA PLUG

Permits .080 dia. pin tip patch cords to be used with equi ment having banana jacks. Insulation molded to plug body.
UPPER: Tip jack, beryllium copper, gold flashed. Accepts .08 dia. pin.
LOWER: Banana plug, one piece nickel plated beryllium co per spring for use with standard 0.166 dia. banana jack. Cro hole (.166 dia.) in body provides side Stack-Up connection.
COLORS: Black, Red.

MODEL 1809 (Specify Color) QUANTITY DISC. CODE (A) **NET .7**

POMONA ELECTRONICS

BNC ADAPTERS

ADAPTER — BNC RECEPTACLE TO DOUBLE BANANA PLUG

Permits BNC plug to be used with equipment having banana jacks. Excellent for adapting laboratory VTVM, oscilloscopes and signal generator inputs to readily available coaxial cables.
UPPER: BNC receptacle.
LOWER: Double banana plug, on ¾″ centers. Cross holes (.166 dia.) in body provide side Stack-Up connections.
COLOR: Black.

MODEL 1269 QUANTITY DISC. CODE (A) **NET 2.95**

Now! Increase the flexibility of your laboratory with the use of POMONA Molded test accessories. Minimize the necessity of stocking a large quantity and variety of coaxial cables by using POMONA molded adapters. Tough thermo-plastic material molded to plug body or connectors insures maximum strength, moisture resistance and excellent insulative properties.

ADAPTER — BNC PLUG TO DOUBLE BANANA PLUG

Permits BNC receptacle to be used with equipment having banana jacks. Minimizes number of coaxial connections for maximum efficiency.
UPPER: BNC plug.
LOWER: Double banana plug, on ¾″ centers. Cross holes (.166 dia.) in body provide side Stack-Up connections.
COLOR: Black.

MODEL 1270 QUANTITY DISC. CODE (A) **NET 3.95**

ADAPTER — BINDING POSTS TO BNC RECEPTACLE

Permits single or double banana plugs to be used with equipment having BNC plug.
UPPER: Insulated binding posts, on ¾″ centers with .166 dia. banana jacks. Cross holes (.166 dia.) in body provide side Stack-Up connections.
LOWER: BNC receptacle.
COLOR: Body, Black. Binding Posts: Black/Red.

MODEL 1452 QUANTITY DISC. CODE (A) **NET 4.95**

ADAPTER — BINDING POSTS TO BNC PLUG

Permits single or double banana plugs to be used with equipment having BNC receptacle. Excellent for use with laboratory oscilloscopes.
UPPER: Insulated binding posts, on ¾″ centers with .166 dia. banana jacks. Cross holes (.166 dia.) in body provide side Stack-Up connections.
LOWER: BNC plug.
COLOR: Body, Black. Binding Posts: Black/Red.

MODEL 1296 QUANTITY DISC. CODE (A) **NET 4.95**

ADAPTER — SIGNAL ISOLATOR — BNC RECEPTACLE TO DOUBLE BANANA PLUG

Permits BNC male connector to be used with equipment having banana jacks. General purpose ceramic capacitor molded internally. Rated @ .01 mfd ±20%, 200 WVDC. Insulation resistance 10,000 megohms min. Ideal for isolating DC signals from VTVM inputs and signal generator outputs.
UPPER: BNC receptacle.
LOWER: Double banana plug, on ¾″ centers. Cross holes (.166 dia.) in body provide side Stack-Up connections.
COLOR: Blue.

MODEL 1868 QUANTITY DISC. CODE (A) **NET 7.85**

NW

ADAPTER — SINGLE BINDING POST TO BNC PLUG

Permits single banana plug to be used with equipment having a BNC receptacle. Connector body features a Non-Tarnish finish.
UPPER: Insulated binding post for multiple stacking.
LOWER: BNC Plug.
COLOR: Binding Post: Black or Red (specify)

MODEL 3430 (Specify color) QUANTITY DISC. CODE (A) **NET 2.50**

ADAPTER — BNC MATCHING PAD

Adapts 600 OHM sources to 50, 75 or 93 OHM cables. Excellent for matching signal generators and VTVM's to standard coaxial cables. Ideal for receiver alignment. Molded in deposited carbon resistors 1%, ¼W.
UPPER: BNC receptacle.
LOWER: Double banana plug, on ¾″ centers. Cross holes (.166 dia.) in body provide side Stack-Up connections.

MODEL	COLOR	RANGE — OHMS	NET	QUANTITY DISC. CODE
1656-1	Yellow	600 to 50	10.85	(A)
1656-2	Red	600 to 75	10.85	
1656-3	White	600 to 93	10.85	
1656-4	Blue	300 to 50	10.85	

ADAPTER — BNC RECEPTACLE TO SHIELDED BANANA PLUGS

Permits BNC plug to be used with equipment having banana jack binding posts. Black anodized aluminum shield reduces noise Pick-up more than 70 DB. Ideal for low level inputs to oscilloscopes, wave analyzers, etc.
UPPER: BNC receptacle.
LOWER: Shielded double banana plug, on ¾″ centers.

MODEL 1645 QUANTITY DISC. CODE (A) **NET 3.75**

ADAPTER — BNC RECEPTACLE TO SHIELDED BANANA JACKS

Permits BNC plug to be used with equipment having banana plugs. Black anodized aluminum shield reduces noise pick-up more than 70 DB. Ideal for low level inputs to oscilloscopes, wave analyzers, etc.
UPPER: BNC receptacle.
LOWER: Shielded double banana jacks, on ¾″ centers.
COLOR: Black.

MODEL 1681 QUANTITY DISC. CODE (A) **NET 3.75**

POMONA ELECTRONICS

TNC & "N" ADAPTERS

ADAPTER — TNC RECEPTACLE TO DOUBLE BANANA PLUG

Permits TNC plug to be used with equipment having banana jacks. Perfect for connecting modern control systems to laboratory test equipment.
UPPER: TNC receptacle.
LOWER: Double banana plug, on ¾" centers. Cross holes (.166 dia.) in body provide side Stack-Up connections.
COLOR: Black.

MODEL 1340 QUANTITY DISC. CODE (A) **NET 5.85**

ADAPTER — TYPE "N" RECEPTACL TO DOUBLE BANANA PLUG

Permits Type "N" plug to be used it equipment having banana jacks. Ide fo connecting R.F. equipment to conven na test equipment.
UPPER: Type "N" receptacle.
LOWER: Double banana plug, on ¾" an ters. Cross holes (.166 dia.) in body pr de side Stack-Up connections.
COLOR: Black.

MODEL 1740 QUANTITY DISC. CODE (A) **NET 5.5**

ADAPTER — TNC PLUG TO DOUBLE BANANA PLUG

Permits TNC receptacle to be used with equipment having banana jacks. Minimizes your stock of coaxial cables.
UPPER: TNC plug.
LOWER: Double banana plug, on ¾" centers. Cross holes (.166 dia.) in body provide side Stack-Up connections.
COLOR: Black.

MODEL 1981 QUANTITY DISC. CODE (A) **NET 6.85**

ADAPTER — TYPE "N" PLUG TO DOUBLE BANANA PLUG

Permits type "N" receptacle to be used it equipment having banana jacks.
UPPER: Type "N" plug.
LOWER: Double banana plug, on ¾" ce rs. Cross holes (.166 dia.) in body provide de Stack-Up connections.
COLOR: Black.

MODEL 1770 QUANTITY DISC. CODE (A) **NET 6.5**

ADAPTER — BINDING POSTS TO TNC PLUG

Permits single or double banana plugs to be used with equipment having a TNC receptacle. Exceptional for signal insertion with rapid interchangeability of terminations.
UPPER: Insulated binding posts, on ¾" centers with .166 dia. banana jacks. Cross holes (.166 dia.) in body provide side Stack-Up connections.
LOWER: TNC plug.
COLOR: Body, Black. Binding Posts: Black/Red.

MODEL 1982 QUANTITY DISC. CODE (A) **NET 7.85**

ADAPTER — BINDING POSTS TO TYPE "N" PLUG

Permits single or double banana plugs to be used h equipment having Type "N" receptacle. Binding p s allow component insertion.
UPPER: Insulated binding posts, on ¾" cen ters with .166 dia. banana jacks. Cros holes (.166 dia.) in body provide side Stacl Up connections.
LOWER: Type "N" plug.
COLOR: Black. Binding Posts: Black/Red.

MODEL 1796 QUANTITY DISC. CODE (A) **NET 7.8**

ADAPTER — BINDING POSTS TO TNC RECEPTACLE

Permits single or double banana plugs to be used with equipment having TNC plug. Useful for rapid interconnection of systems and components.
UPPER: Insulated binding posts, on ¾" centers with .166 dia. banana jacks. Cross holes (.166 dia.) in body provide side Stack-Up connections.
LOWER: TNC receptacle.
COLOR: Body, Black. Binding Posts: Black/Red.

MODEL 1976 QUANTITY DISC. CODE (A) **NET 6.85**

ADAPTER — BINDING POSTS TO TYPE "N" RECEPTACLE

Permits single or double banana plugs be used with equipment having type " plug. Useful for rapid interconnection systems and components.
UPPER: Insulated binding posts, on centers with .166 dia. banana jacks. Cr holes (.166 dia.) in body provide side Sta Up connections.
LOWER: Type "N" receptacle.
COLOR: Body, Black. Binding Posts: Blac Red.

MODEL 1992 QUANTITY DISC. CODE (A) **NET 6.8**

ADAPTER — TNC RECEPTACLE TO SHIELDED BANANA PLUGS

Permits TNC plug to be used with equipment having banana jack binding posts. Black anodized aluminum shield reduces noise pick-up more than 70 DB.
UPPER: TNC receptacle.
LOWER: Double banana plug, on ¾" centers.
COLOR: Black.

MODEL 1975 QUANTITY DISC. CODE (A) **NET 5.85**

ADAPTER — TYPE "N" RECEPTACLE TO SHIELDED BANANA PLUGS

Permits type "N" plug to be used with equ ment having banana jack binding posts. Bla Anodized aluminum shield reduc noise pick-up more than 70 D
UPPER: Type "N" receptacle.
LOWER: Double banana plug, ¾" centers.
COLOR: Black.

MODEL 1983 QUANTITY DISC. CODE (A) **NET 5.8**

ODEL 1921 QUANTITY DISC. CODE (A) **NET 5.85**

ADAPTER — UHF RECEPTACLE TO DOUBLE BANANA PLUG

Permits UHF plug to be used with equipment having banana jacks.
UPPER: UHF receptacle, ⅝" dia.
LOWER: Double banana plug, on ¾" centers. Cross holes (.166 dia.) in body provide side Stack-Up cannections.
COLOR: Black.

MODEL 1707 QUANTITY DISC. CODE (A) **NET 4.85**

ADAPTER — UHF RECEPTACLE TO SHIELDED BANANA PLUGS

Permits UHF plug to be used with equipment having banana jack binding posts. Black anodized shield reduces noise pick-up at least 70 DB.
UPPER: UHF receptacle, ⅝" dia.
LOWER: Double banana plug on ¾" centers.
COLOR: Black.

MODEL 1708 QUANTITY DISC. CODE (A) **NET 4.85**

ADAPTER — BINDING POSTS TO UHF RECEPTACLE

Permits single or double banana plugs to be used with equipment having UHF plug.
UPPER: Insulated binding posts, on ¾" centers with .166 dia. jacks. Cross holes (.166 dia.) in body provide side Stack-Up connections.
LOWER: UHF receptacle, ⅝" dia.
COLOR: Body, Black. Binding posts: Black/Red.

MODEL 1792 QUANTITY DISC. CODE (A) **NET 5.85**

ADAPTER — BINDING POSTS TO UHF PLUG

Permits single or double banana plugs to be used with equipment having a UHF receptacle, ⅝" dia. Convenient for use with modern oscilloscopes. Center conductor binding post Red; Ground, Black.
UPPER: Insulated binding posts, on ¾" centers with .166 dia. jacks.
LOWER: UHF plug.

MODEL 1699 QUANTITY DISC. CODE (A) **NET 5.85**

ADAPTER — BINDING POST TO UHF PLUG

Permits single banana plug to be used with equipment having a UHF receptacle, ⅝" dia. Adds flexibility to your oscilloscope.
UPPER: Insulated binding post with .166 dia. banana jack.
LOWER: UHF plug.

MODEL 1698 QUANTITY DISC. CODE (A) **NET 3.85**

POMONA ELECTRONICS

PHONE AND PHONO PLUG ADAPTERS

ADAPTER-BNC RECEPTACLE TO PJ-068/PJ-309* PHONE PLUG

Permits BNC plug to be used with equipment having three circuit phone jacks for .206 dia. phone plugs. Readily adapts equipment to available BNC coaxial cables. Tip connected to inner contact of connector and Ring connected to shell. Sleeve, no connection.

LOWER: Phone Plug, PJ-068/PJ-309*
COLOR: Black
*PJ-309 Interchangeable with WE-309

MODEL 1794 QUANTITY DISC. CODE (A) **NET 6.85**

ADAPTER — BNC RECEPTACLE TO PJ-051* PHONE PLUG

Permits BNC plug to be used with equipment having three circuit phone jacks for .250 dia. phone plugs. Readily adapts equipment to available BNC coaxial cables. Tip connected to inner contact of connector and Ring connected to shell. Sleeve, no connection.

UPPER: BNC receptacle, UG1094/U.
LOWER: Phone Plug, PJ-051*
*PJ-051 Interchangeable with WE 310

MODEL 2798 QUANTITY DISC. CODE (A) **NET 6.85**

ADAPTER-BINDING POSTS TO PJ-068/PJ-309* PHONE PLUG

NEW

Permits single or double banana plug to be used with equipment having three circuit phone jacks for .206 dia. phone plugs. Ideal for rapid mounting of components and test leads. The PJ-068 and PJ-309 Plug have the same mechanical dimensions.

UPPER: Insulated binding posts on ¾" centers with .166 dia. banana jacks. Cross holes (.166 dia.) in body provide side stack-up.
LOWER: Phone Plug, PJ-068/PJ-309*
COLOR: Body, Black. Binding Posts: Black/Red.
*PJ-309 Interchangeable with WE 309.

MODEL 3365 QUANTITY DISC. CODE (A) **NET 6.85**

ADAPTER-BANANA JACKS TO PJ-051* PHONE PLUG

Permits single or double banana plugs to be used with equipment having three circuit phone jacks for .250 dia. phone plugs. Tip connected to hot side of adapter and Ring connected to ground side. Sleeve, no connection.

UPPER: Double banana jack, on ¾" centers. Crossholes (.166 dia.) in body provide side Stack-up connection.
LOWER: Phone Plug, PJ-051*
COLOR: Black
*PJ-051 Interchangeable with WE310

MODEL 2112 QUANTITY DISC. CODE (A) **NET 5.85**

ADAPTER — BINDING POSTS TO PHONE PLUG

Permits single or double banana plug to be used with equipment having phone jacks. Ideal for rapid mounting of components and test leads.

UPPER: Insulated binding posts, on ¾" centers with .166 dia. banana jacks. Cross holes (.166 dia.) in body provide side Stack-Up connections.

LOWER: ¼" dia. phone plug, 1-3/16" long.
COLOR: Body, Black. Binding Posts: Black/Red.

MODEL 1285 NET 4.85 QUANTITY DISC. CODE (A)

ADAPTER — BANANA JAC TO PHONE PLUG

Permits single or dou banana plugs to be u with equipment hav phone jacks.

UPPER: Double ban jack, on ¾" cente Cross holes (.166 dia.) body provide side Sta Up connections.

LOWER: Standard ¼" dia. phone plug, 1-3/16" long.
COLOR: Black.

MODEL 1980 NET 2.8 QUANTITY DISC. CODE (A)

ADAPTER — BNC RECEPTACLE TO PHONE PLUG

Permits BNC plug to be used wit equipment having standard ¼" dia phone jacks. Readily adapts equip ment to available BNC coaxia cables. All metal construction t insure proper shielding.

UPPER: BNC receptacle, UG1094/U.
LOWER: Standard ¼" dia. phon plug, 1 3/16" Long.

MODEL 1297 QUANTITY DISC. CODE (A) **NET 5.85**

ADAPTER — BNC RECEPTACLE TO PHONO PLUG

Permits BNC plug to be used with equipment having phono jacks. Readily adapts equipment to available BNC coaxial cables. All metal construction reduces pick-up more than 70 DB. to insure proper shielding.

UPPER: BNC receptacle UG1094/U.
LOWER: Phono plug.

MODEL 2957 QUANTITY DISC. CODE (A) **NET 3.50**

ADAPTER — PHONO JACK TO DOUBLE BANANA PLUG

Permits Phono plug to be used with equipment having banana jacks or binding posts. Quickly converts a cable with a phono plug to a double banana plug.

UPPER: Phono jack.
LOWER: Double Banana plug, on ¾" centers. Cross holes (.166 dia.) in body provide Side Stack-Up connections.
COLOR: Black.

MODEL 1442 QUANTITY DISC. CODE (A) **NET 3.85**

See YELLOW SECTION for Local Offices, Phones

POMONA ELECTRONICS

TEST ADAPTERS

ADAPTER — BNC JACK TO JACK

Allows the interconnection of two coaxial cables with BNC plugs.

FEATURES:
- Non-Tarnish finish.
- 50 Ohm impedance.
- Teflon insulation.
- Gold flashed beryllium copper contacts.

ODEL 3283 — QUANTITY DISC. CODE (A) NET 1.50

ADAPTER — BNC "T" — 3 JACKS

Allows the interconnection of three coaxial cables with BNC plugs.

FEATURES:
- Non-Tarnish finish.
- 50 Ohm impedance.
- Teflon insulation.
- Gold flashed beryllium copper contacts.

IODEL 3284 — QUANTITY DISC. CODE (A) NET 4.85

ADAPTER — BNC "T" JACK — PLUG — JACK

With this adapter, equipment or coaxial cables having a single BNC jack are changed to two BNC jacks.

FEATURES:
- Non-Tarnish finish.
- 50 Ohm impedance.
- Teflon insulation.
- Gold flashed beryllium copper female and outer male contact.

MODEL 3285 — QUANTITY DISC. CODE (A) NET 3.25

ADAPTER — RIGHT ANGLE BNC JACK TO BNC PLUG

Adapts straight BNC plug to right angle BNC plug.

FEATURES:
- Non-Tarnish finish.
- 50 Ohm impedance.
- Teflon insulation.
- Beryllium copper female and outer finger contact.
- Gold flashed female and male contact.

MODEL 3534 — QUANTITY DISC. CODE (A) NET 3.25

ADAPTER — BNC PLUG TO PLUG

Allows the interconnection of two coaxial cables with BNC Jacks.

FEATURES:
- Non-Tarnish finish.
- 50 Ohm impedance.
- Teflon insulation.
- Beryllium copper outer finger contacts.
- Gold flashed male contacts.

MODEL 3533 — QUANTITY DISC. CODE (A) NET 2.95

ADAPTER — BNC JACK TO UHF PLUG

Allows the use of a BNC plug on equipment having a UHF Jack.

FEATURES:
- Non-Tarnish finish.
- Rexolite insulation.
- Gold flashed beryllium copper female contact.
- Gold flashed male contact.

MODEL 3286 — QUANTITY DISC. CODE (A) NET 1.75

ADAPTER — UHF JACK TO BNC PLUG

Allows the use of a UHF Plug on equipment having a BNC Jack.

FEATURES:
- Non-Tarnish finish.
- 50 Ohm impedance.
- Rexolite insulation.
- Gold flashed Phosphor Bronze female UHF and male BNC contacts.

MODEL 3287 — QUANTITY DISC. CODE (A) NET 2.95

ADAPTER — BNC JACK TO TYPE "N" PLUG

Allows the use of a BNC Plug on equipment having a type "N" jack.

FEATURES:
- Non-Tarnish finish.
- Teflon insulation.
- Gold flashed contacts.

MODEL 3288 — QUANTITY DISC. CODE (A) NET 1.95

ADAPTER — TYPE "N" JACK TO BNC PLUG

NEW

Allows the use of a Type "N" plug on equipment having a BNC jack.

FEATURES:
- Non-Tarnish finish.
- Teflon insulation.
- Beryllium copper female "N" contact and BNC outer finger contact.
- Gold flashed female "N" and male BNC contact.

MODEL 3535 — QUANTITY DISC. CODE (A) NET 2.95

ADAPTER—BNC RECEPTACLE TO SINGLE BANANA PLUG

Permits BNC plug to be used with equipment having banana jacks. Inner conductor connected only. Excellent for adapting laboratory VTVM, oscilloscopes and signal generator inputs to readily available coaxial cables.

UPPER: BNC receptacle, UG1094/U.
LOWER: Single Banana Plug.
COLOR: Black.

MODEL 1894 — QUANTITY DISC. CODE (A) NET 2.50

ADAPTER — BNC RECEPTACLE TO SHIELDED BANANA PLUG

Permits BNC plug to be used with equipment having banana jacks or binding posts. Ideal for use when shielding of single banana jacks is needed. Nickel plated brass shield reduces pick-up more than 70 DB.

UPPER: BNC Receptacle, UG1094/U.
LOWER: Shielded single banana plug.

MODEL 2990 — QUANTITY DISC. CODE (A) NET 2.50

POMONA ELECTRONICS

ISOLATION PLUGS — COMPONENT MOUNTINGS

CREATE passive and active networks, voltage dividers, isolation networks or attenuators with the Split-Terminal isolation plugs described below.

Gold flashed solder turret terminals provide permanent, reliable noise-free connections for component mounting.

Tough thermo-plastic material molded to plug body and connectors insures maximum strength, moisture resistance and excellent insulative properties.

Specifications for MDP-X, 1390, 1837, 1468:

- Fits standard 0.166 dia. banana jack.
- Spring, heat treated beryllium copper alloy 170 per QQ-C-533.
- Plug body, Brass per QQ-B-626 Comp. 22.
- Nickel plated per QQ-N-290, Class 2.
- Contact resistance less than 0.001 ohms per banana plug.

TYPICAL APPLICATION

ACTUAL SIZE

MODEL MDP-X **MODEL 1390**

DOUBLE BANANA PLUG, FOUR TERMINAL ISOLATION

Provides four terminal isolation. Top Stack-Up receptacles isolated from lower plugs. Ideal for insertion of matching networks in laboratory VTVM's, signal generators, etc. Gold flashed solder turret terminals for permanent noise-free connections.

UPPER: Double banana jacks, .166 dia., on ¾" centers.
LOWER: Double banana plug on ¾" centers.
COLOR: Red.

MODEL MDP-X QUANTITY DISC. CODE (A) **NET 3.25**

DOUBLE BANANA PLUG, THRE TERMINAL ISOLATION

Provides three terminal isolation. Excellent for "L" ar "Pi" networks. Plug and receptacle nickel plated. Go flashed solder turret terminals for permanent noise-fre connections. "Ground" straight feed-thru. Hot sic isolated.

UPPER: Banana jacks, .16 dia. on ¾" centers.
LOWER: Double banana plug on ¾" centers.
COLOR: Blue.

MODEL 1837 QUANTITY DISC. CODE (A) **NET 2.75**

ADAPTER — BINDING POSTS TO BNC PLUG, ISOLATION

Permits single or double banana plugs to be used with equipment having BNC receptacle. Provides isolation for a four terminal network. Binding posts facilitate connections of test leads or additional components. Gold flashed solder turret terminals provide permanent noise-free connections.

UPPER: Insulated binding posts, on ¾" centers with .166 dia. jacks.
LOWER: BNC plug.
COLOR: Body, Black.
Binding Posts: Black/Red.

MODEL 1469 QUANTITY DISC. CODE (A) **NET 10.85**

ADAPTER — BNC RECEPTACLE TO DOUBL BANANA PLUG, ISOLATION

Permits BNC plug to be used with equipmen having banana jacks. Provides isolation for four terminal network. Excellent for matchin pad networks. Gold flashed solder turret termi nals for permanent noise-free connnections.

UPPER: BNC receptacle.
LOWER: Double banana plug, on ¾" centers
COLOR: Black.

MODEL 1468 QUANTITY DISC. CODE (A) **NET 9.85**

PLUG — SINGLE BANANA, ISOLATION

Provides two terminal isolation. Top Stack-Up receptacle is isolated from lower plug to permit addition of series resistors, diodes, etc. Ideal for computers, lab. circuit design and testing. Gold flashed solder turret terminals for permanent noise-free connections.

UPPER: Banana jack, .166 dia.
LOWER: Banana plug.
COLORS: Black, Red.

MODEL 1390 (Specify color) QUANTITY DISC. CODE (A) **NET 1.25**

PLUG — PIN TIP, ISOLATION

Pin tip jack is isolated from .080 pin tip plug. Provides for addition of series components. Ideal for use with computer boards, lab circuit designs, etc. Gold flashed solder turret terminals for permanent noise-free connections.

UPPER: Tip jack, beryllium copper, gold flashed; accepts .080 dia. pin.
LOWER: Pin tip, .080 dia. Brass, nickel plated.
COLORS: Black Red.

SERIES-PARALLEL ISOLATION PLUGS CONNECTOR TEST ADAPTERS

SERIES PARALLEL ISOLATION PLUGS

MODEL 3501

MODEL 3502

These plugs enable you to build unlimited combinations of series parallel networks eg., voltage dividers attenuator and etc.

Upper crossholes spaced ¾" on centers from lower crossholes to allow connection of double banana plugs. Double banana plugs may be plugged in from both sides.

FEATURES:

- Fits .166 dia. Banana jacks.
- Spring, heat treated beryllium copper alloy 170 per QQ-C-533.
- Plug bodies and jacks, Brass, nickel plated per QQ-N-290 class 2.
- Tough thermoplastic molded to banana jacks and plug bodies.

NW

SERIES-PARALLEL ISOLATION PLUG

Top banana jack and upper pair of crossholes isolated from lower pair of crossholes and banana plug.

UPPER: Banana jack .166 dia.
CENTER: 4 crossholes .166 dia.
LOWER: Banana Plug.
COLOR: Red.

MODEL 3501 — QUANTITY DISC. CODE (A) NET 1.50

DUAL SERIES-PARALLEL ISOLATION PLUG

NEW

Excellent for building attenuators, voltage dividers, isolation networks, etc. Top banana jacks and upper pair of crossholes isolated from lower pair of crossholes and banana plugs.

UPPER: Double banana jack .166 dia., on ¾" centers.
CENTER: 8 crossholes .166 dia.
LOWER: Double banana plug on ¾" centers.
COLOR: Red.

MODEL 3502 — QUANTITY DISC. CODE (A) NET 3.25

TYPICAL APPLICATION

CONNECTOR TEST ADAPTERS

An ideal test adapter for the rapid testing of the hard to get at contacts of multi-pin MS type connectors such as miniature circular, standard circular and rack and panel. Excellent for testing of continuity, voltage and signal on individual contacts. Test adapter available in Pin and socket contacts sizes of 20, 16 and 12.

- Gold flashed contacts conform to "MS" Dimensions.
- Flexible tip prevents damage to connector contacts if test adapter is accidently bent.
- Flexible tip allows testing of adjacent contacts.
- Fully insulated to prevent accidental shorting.
- Accepts standard banana plug.

UPPER: Banana jack, .166 dia., brass, nickel plated.
LOWER: "MS" style contact, gold flashed, see tab block.
Color: See tab block.

POMONA ELECTRONICS

MINIATURE PATCH CORDS

Miniature patch cords for use with .104 dia. miniature banana jacks. Excellent for miniaturization of test equipment and high density packaging for patch systems.

Banana plug springs precision formed of one piece beryllium copper, heat treated for maximum life and low contact resistance. Tough thermoplastic molded to plug body and wire.

FEATURES:

■ Fits .104 dia. miniature banana jacks ■ Plug body brass, per QQ-B-626, Comp. #22 ■ Gold flashed per MIL-G-45204 Type II (.00002/.00003) ■ Spring, one piece heat treated beryllium copper, alloy 170 per QQ-C-533.

SPECIFICATIONS:

■ WIRE: 20 AWG, Strand. 41 x 36 T.C. Extra flexible polyvinyl insulation .087" O.D.
■ RATED: 5 A. Cont., 10 A. Int., 5,000 V.D.C. ■ OPERATING TEMP.: —0°C to +105 C°

LARGER SHIELDED "BLACK BOXES" SIZE "C"

MODEL 2903

(Shown 2/3 actual size)

NEW Series of **LARGER** shielded "BLACK BOXES."

These larger boxes are excellent for compact packaging of voltage dividers, isolation networks and many other applications.

APPLICABLE SPECIFICATIONS: (All Models)
Operating Temp.: —55°C to +150°C.
Working Voltage: 500 Peak.
Noise Rejection: Greater than 70DB

FEATURES:

- SHIELDED HOUSING; Die Cast Aluminum, Alloy #A380, FINISH: BLUE baked enamel per Federal Standard 595 #25109 over phosphoric etch per MIL-C-15328A.
- COVER: .080 Thick Aluminum #6061-T6 with clear anodized finish per MIL-A-8625A.
- 8 ea. #4-40 x ¼" screws secure cover for proper shielding.
- Solder turret terminals for permanent noise free connection of components.
- 2 flanges for easy mounting of box.

POMONA ELECTRONICS — PATCH CORDS BANANA PLUGS

OMONA BANANA PLUG PATCH CORDS

igh thermoplastic insulation molds the g and leads into a strong moisture re- tant integral unit. Excellent for computer rd and test equipment applications. ed by leading industries in applications ere extreme reliability is of prime portance.

ATURES

- One piece beryllium copper heat treated spring for maximum long life.
- Rounded spring design results in maximum contact area.
- Extra flexible polyvinyl insulation used on all leads.

SPECIFICATIONS

- Fits standard 0.166 dia. banana jacks.
- Spring, beryllium copper alloy 170 per QQ-C-533.
- Plug body, brass per QQ-B-626, Comp. 22.
- Nickel plated per QQ-N-290, Class 2.
- Contact resistance less than 0.001 ohms per banana plug.
- Operating Temp.: −0°C to +105°C.
- Wire, 18 AWG, stranding 65 x 36 T.C.
- Insulation, polyvinyl .144″ O.D.
- Ratings: 15 A. Cont., 30 A. Int. 10,000 W.V.D.C.

POMONA ELECTRONICS

JUMPERS — LOW THERMAL E.M.F.

TELLURIUM COPPER LEADS FOR PRECISION MEASUREMENTS

POMONA ELECTRONICS has advanced the state of the art in measurements where Thermoelectric Effects are significant sources of error. Comparators designed for use with the Kelvin-Varley voltage divider and microvolt leads were tested with Primary Standards Laboratory equipment.

Thermoelectric voltages were not detected until the most sensitive galvanometer range was used.

THERMOELECTRIC PROPERTIES—Tellurium copper gold plated spade lugs cold-staked to multi-stranded 12 gauge COPPER wire minimize thermoelectr effects—an absolute necessity for low voltage, hi precision measurements.

LOW RESISTANCE—12 gauge multi-strande COPPER wire results in extremely low cable resis ance. Spade lugs plated with 50 micro inches go for minimum contact resistance and minimu thermal EMF when using copper binding post (Less than 0.01 $\mu v/c^{\circ}$).

HIGH VOLTAGE TEST PROBES

DC HIGH VOLTAGE TEST PROBES WITH BUILT-IN METER

These High Voltage Test Probes built by Pomona Electronics are the most advanced instruments of their kind on the market; the only test probes featuring a built-in voltmeter. The Test Probes are self-contained, portable test instruments for rapid measurements of high voltages.

Easy to operate! Just ground the test probe instrument by attaching alligator clip to chassis, contact test probe tip to high voltage being measured and read voltage from the built-in meter. No warm-up time. No batteries.

PATENT PENDING

SPECIFICATIONS:

RANGE: See below. **SENSITIVITY:** 20,000 ohms/volt (50 ua) movement. **ACCURACY:** ± 3% full scale. **MULTIPLIER RESISTANCE:** See below. **MATERIAL:** Handle—high impact thermoplastic. Probe—high impact polystyrene. **LENGTH:** 14¾″ overall. **WEIGHT:** 8 ounces.

POMONA ELECTRONICS

PATCH CORDS DOUBLE BANANA PLUGS

POMONA MOLDED DOUBLE BANANA PLUG PATCH CORDS AND TEST LEADS

. . . indispensable for bridge transformer connections, three terminal capacitor measurements and general hook-up for two wire systems. They are horizontally and vertically stackable in parallel.

Tough thermo-plastic material molded to plug body and cable insures maximum strength, moisture resistance and excellent insulative properties.

Used by leading industries in applications where extreme reliability is of prime importance.

FEATURES . . .

- One piece beryllium copper heat treated spring for long life.
- Rounded spring design results in maximum contact area.
- GND., clearly molded on plug body and shell.
- Solder-bonded noise-free connections.

SPECIFICATIONS . . .

- Fits standard 0.166 dia. banana jacks, on ¾" centers.
- Contact resistance less than 0.001 ohms per plug.
- Spring beryllium copper alloy 170 per QQ-C-533.
- Plug body brass per QQ-B-625, Comp. 22.
- Nickel plated per QQ-N-290, Class 2.

"PUSH ON" STACKING BNC PATCH CORDS

These multiple stacking patch cords connect the center conductors of BNC jacks having a common chassis. Excellent for use with instruments such as oscilloscopes. Stacking feature enables an endless number of connections to the same point.

FEATURES:
- **CONTACT:** Male and Female, one piece heat treated beryllium copper, gold flashed.
- **WIRE:** 18 AWG., stranded 65 x 36 T.C., polyvinyl insulation.
- **INSULATION:** Tough thermoplastic, polypropylene, molded around contact and wire.
- **OPERATING TEMP.:** —25° C to + 125° C.

POMONA ELECTRONICS

BREADBOARD SOCKETS SOCKET SAVERS

SURFACE MOUNTED BREADBOARD SOCKETS

IDEAL FOR EXPERIMENTAL CIRCUIT DESIGN, portable and enclosed units, plug-in and packaged assemblies. They feature: An insulated base to prevent connections from shorting to chassis; Eliminates double chassis design; Circuits may be wired in an enclosed unit; The base connections are numbered for easy identification; Grade-A phosphor bronze spring contacts; Standard center to center mounting holes; For ease of installation the 7 and 9 Pin Miniatures may be mounted either in the center or the sides, the 8 Pin Octal is mounted on the sides; Small mounting holes permits the re-use of experimental chassis.

11 CONTACT RELAY SOCKET

Ideal for use in Industrial Control equipment requiring a rugged compact 11 contact configuration.

FEATURES:
- Simplified above chassis mounting.
- Socket and Base molded of diallyl phthalate.
- Socket connections numbered for easy identification.
- Socket may be gang mounted.
- Heat treated Beryllium copper contacts.
- 600 VRMS at 10 amps.

MODEL 2811 QUANTITY DISC. CODE (A) **NET 2.7**

SOCKET SAVERS

The Socket Saver® is designed to be installed on tube checkers and other electronic equipment to prevent wear and tear of sockets on original equipment. They are easy to install and remove. This eliminates the necessity of replacing and rewiring sockets on original equipment. Built quality materials. BERYLLIUM COPPER LONG LIFE CONTACTS to give maximum service.

RACK and PANEL CONNECTORS

For QUICK REACTION to your connector needs, come to POSITRONIC INDUSTRIES. Military and Industrial quality Rack and Panel connectors readily available as standard catalog products. Any catalog listed connector may be promptly modified for our customer's special applications. Most cataloged connectors shipped within 10 days. Special connectors will be designed and shipped 21 to 90 days after design approval.

RECTANGULAR REMOVABLE CONTACTS

Mil-C-22857, 14, 18, 20, 26, 34, 50, 66, 75 and 104 contacts. Crimp and solder contacts for #16 through #24 AWG wire. Hoods, shells, guide pins, sockets and polarizing jackscrews available. DAP molded connector bodies.

MINIATURE RECTANGULAR

Mil-C-8384, 7 to 50 contacts. Guide pilots, sockets, hoods, shells, and screw locks standard accessories. Solder pot #20 AWG wire contacts. MME and DAP moldings.

MINIATURE HEXAGONAL

Mil-C-8384, 4 to 9 solder pot contacts #20 AWG wire. Threaded bodies ⅜-24, ½-20 in MME and DAP. Mounting accessories and hoods available.

SUBMINIATURE HEXAGONAL

2 and 3 solder pot contacts #24 AWG wire. ¼-20 threaded body in MME and DAP. Hood and mounting accessories available. 5/16 Hex dia. length mated connectors including hood ⅝ max.

PRINTED WIRING & TEST POINT

6, 8, 10, 12, 15, 18, 22, 25 contacts, tuning fork, .156 and .150 spacing. 1/16 thick boards. MME and DAP bodies.

Free 32 page Handbook of Standard Connectors containing complete electrical and physical data of our connectors is available upon request.

REYNOLDS INDUSTRIES, INC.

High Voltage Coaxial Connectors

Factory Location: 5005 McConnell Ave./Los Angeles, Calif. 90066
Mailing Address: P.O. Box 850 Dept. M/Marina Del Rey, Calif. 90291
(213) 823-5491/870-5671/Telex: 65-2424

SERIES 600 S HIGH ALTITUDE, HIGH VOLTAGE COAXIAL CONNECTORS AND CABLE ASSEMBLIES

VOLTAGE RATING: 10,000 VDC PANEL CONNECTORS, CABLE CONNECTORS AND CABLE ASSEMBLIES (ADAPTERS 5000 VDC.)

PANEL CONNECTOR: P/N 167-3771

Rated at 10KVDC at any altitude for limited pulse applications, such as EBW firing circuits, providing the rear portion of the connector is suitably encapsulated and it is mated to P/N 167-3770. Threaded sleeve couplings. Gold plated.

Production Test: 100% tested @ 15KVDC for 10 sec. 2% lot tested at altitude to 21KVDC, 3 minutes min.

CABLE CONNECTOR: P/N 167-3770-A

Rated at 10KVDC at any altitude for limited pulse applications, provided it is mated to a suitably encapsulated P/N 167-3771. Threaded sleeve coupling. Soldered center contact and braid assembly. Uses "L" type cable, Reynolds P/N 167-2896. Gold Plated.

Production Test: All insulators are tested to withstand 15KVDC for 10 sec. 2% of each lot are cabled and tested at altitude to 21KVDC, 3 minutes min.

COAXIAL ADAPTERS: RATED 5000 VDC

Rated at 5KVDC for limited service under steady state DC condition. Coupling: Threaded Sleeve. *A:* Double End, Female. P/N 167-3887. *B:* Double End, Male. P/N 167-3318. *C:* Shorting Plug, Male. P/N 167-3833. *D:* "T" Adapter. P/N 167-3888.

Production Test: 100% tested at 7.5KVDC, 10 sec. Max. permissible leakage: 10 microamperes (mated).

COAXIAL CABLE ASSEMBLIES: P/N 167-3306

Rated to 10KVDC for limited pulse applications at any altitude. Uses P/N 167-3770 connectors, Reynolds "L" cable. Soldered per MIL-S-6872.

Production Test: 100% test @ 21KVDC for 15 sec. Max. Leakage: 10 microamperes. Inspected for pin-to-pin or point-to-point continuity of center conductor and shield after assembly.

To Order: Add length desired to basic part number using a dash and " F" for feet, " N" for inches. Example: 167-3306-10F-8N is 10 feet 8 inches long.

SERIES 500 HIGH VOLTAGE COAXIAL CABLE CONNECTORS AND CABLE ASSEMBLIES

VOLTAGE RATING: 10,000 VDC*

*The voltage ratings shown are for limited service under steady-state DC conditions at sea level. Under these conditions, the connectors operate in the corona region, and therefore have a limited service capability.

RECESSED CONTACT PANEL CONNECTOR P/N 167-2827

Recessed contact for use on the "hot" side of a HV circuit to minimize personnel hazard. Leakage (unmated): less than 1 microamp. at rated voltage. Spring fingers on mating connector 167-2826 provide ground before center conductor makes contact. Coupling: bayonet sleeve.

Production Test: 100% tested @ 13KVDC, 15 sec.

FLUSH CONTACT CABLE CONNECTOR P/N 167-2826. (MATES P/N 167-2827)

For connecting high voltage cable to power supply. Mates with P/N 167-2827. Locking, bayonet sleeve coupling. Spring fingers provide ground contact prior to center conductor contact. Assembly: male contact soldered to cable center conductor, braid crimped to body. Uses type "C" cable (P/N 167-2669).

Production Test: 100% tested at 13KVDC for 15 sec.

FLUSH CONTACT PANEL CONNECTOR P/N 167-2830

For use on the load or "cold" side of a high voltage circuit. Mates with P/N 167-2829. Coupling: bayonet sleeve. Spring fingers on mating connector provide ground contact before center conductor contact.

Production Test: 100% tested at 13KVDC for 15 sec.

RECESSED CONTACT CABLE CONNECTOR P/N 167-2829. (MATES P/N 167-2830)

Recessed center contact to minimize personnel hazard while connecting the "hot" end of a HV cable to load receptacles. Mates with P/N 167-2830. Locking, bayonet sleeve coupling. Spring fingers provide ground contact prior to center conductor contact. Assembly: male contact soldered to cable center conductor, braid crimped to body. Uses type "C" cable (P/N 167-2669).

Production Test: 100% tested at 13KVDC for 15 sec.

COAXIAL CABLE ASSEMBLIES: P/N 167-2969

Rated as 10KVDC with both ends mated. Comprised of P/N 167-2829 (recessed contact) for "hot" end of cable, and P/N 167-2826 (Flush contact) for connection to power source. Uses type "C" cable (P/N 167-2669).

Production Test: 13 KVDC potential between center conductor and shell: 15 seconds minimum.

To Order: Add length desired to basic part number using a dash and " F" for feet, " N" for inches. Example: 167-2969-10F-8N is 10 feet 8 inches long.

SERIES 531 SAFE HIGH VOLTAGE COAXIAL CABLE CONNECTORS AND ASSEMBLIES. Center Contact on Panel and Cable Connectors is Recessed 0.556"

VOLTAGE RATING: 10,000 VDC*

*The voltage ratings shown are for limited service under steady-state DC conditions at sea level. Under these conditions, the connectors operate in the corona region, and therefore have a limited service capability.

"SAFE" PANEL CONNECTOR: P/N 167-3555 RECESSED CONTACT

Provides rated voltage standoff, mated or unmated. Recessed contact for minimum personnel hazard. Less than 1 microamp. leakage at rated voltage (unmated, with corona ball). Mates with P/N 167-3554. Coupling bayonet sleeve. Mating connector provides ground contact before center conductor makes contact. To order corona ball, add "B" to part number.

Production Test: 100% tested at 15KVDC for 15 sec.

CABLE CONNECTOR: P/N 167-3554

Provides rated voltage standoff, mated or unmated. Recessed contact for minimum personnel hazard. Leakage (unmated) at rated voltage: less than 1 microamp. Mates. P/N 167-3555 and 167-3646. Coupling: bayonet sleeve. Provides a ground contact prior to center conductor establishing contact. Assembly: soldered center contact, crimped sleeve braid. Uses type "C" cable (P/N 167-2669).

Production Test: 100% tested at 15KVDC for 15 sec.

DOUBLE ENDED PANEL CONNECTOR/ADAPTER: P/N 167-3646

Panel mounted coupler for connecting to two cables. Recessed contact for min. personnel hazard. Leakage (mated or unmated) at rated voltage: less than 1 microamp. Mates P/N 167-3554, both ends. Mating connector provides ground before center conductor makes contact. Coupling: bayonet sleeve locking.

Production Test: 15KVDC for 1 minute.

COAXIAL CABLE ASSEMBLY: P/N 167-3648

Comprised of P/N 167-3554 connectors (recessed contacts) at both ends for minimum personnel hazard. Mates P/N 167-3555 and P/N 167-3646 Leakage at rated voltage less than 1μa. Uses type "C" cable (P/N 167-2669). Soldered per MIL-S-6872.

Production Test: 100% tested at 15KVDC for 1 min.

To Order: Add length desired to basic part number using a dash and "_F" for feet, "_N" for inches. Example: 167-3648-10F-8N is 10 feet 8 inches long.

SERIES 521 SAFE HIGH VOLTAGE COAXIAL CABLE CONNECTORS AND ASSEMBLIES. Center Contact on Panel and Cable Connectors is Recessed 0.896"

VOLTAGE RATING: 20,000 VDC*

*The voltage ratings shown are for limited service under steady-state DC conditions at sea level. Under these conditions, the connectors operate in the corona region, and therefore have a limited service capability.

RECESSED CONTACT PANEL CONNECTOR P/N 167-3517

Provides rated voltage standoff, mated or unmated. Recessed contact for minimum personnel hazard. Less than 1 microamp. leakage at rated voltage (unmated, with corona ball). Mates P/N 167-3516. Coupling: bayonet sleeve. Mating connector grounds before center conductor makes contact. To order optional corona ball, add "B" to part number.

Production Test: 100% tested at 28KVDC, 15 seconds.

COAXIAL CABLE CONNECTOR: P/N 167-3516

Provides rated voltage standoff, mated or unmated. Recessed contact for minimum personnel hazard. Less than 1 microamp. leakage at rated voltage (unmated). Mates with P/N 167-3517 and P/N 167-3406. Grounds before center conductor makes contact. Coupling: bayonet sleeve. Uses RG213/U or RG8/U cable. Assembly: Soldered center contact, crimped braid.

Production Test: 100% tested at 28KVDC for 15 sec.

COAXIAL DOUBLE-ENDED PANEL CONNECTOR/ADAPTER P/N 167-3406

Panel mount coupler/adapter for connecting 2 cables. Recessed center contact for minimum personnel hazard. Leakage (mated or unmated) at rated voltage: less than 1 microamp. Mates P/N 167-3516 on both ends. Coupling: bayonet sleeve. Mating connector grounds before center conductor establishes contact.

Production Test: 100% tested at 28KVDC, 1 minute.

COAXIAL CABLE ASSEMBLY: P/N 167-3638

Comprised of P/N 167-3516 connectors (recessed contacts) at both ends for minimum personnel hazard. Mates P/N 167-3517 and P/N 167-3406. Leakage at rated voltage is less than 1 microampere. Uses RG8/U cable. Soldered per MIL-S-6872.

Production Test: 100% tested at 28KVDC for 15 sec.

To Order: Add length desired to basic part number using a dash and "_F" for feet, "_N" for inches.

Example: 167-3638-10F-8N is 10 feet 8 inches long. For RG213/U cable, add RG213 at end of part no.

SERIES 310 HIGH VOLTAGE, HIGH ALTITUDE, MOISTURE PROOF COAXIAL CONNECTORS AND ASSEMBLIES

VOLTAGE RATING: 15,000 VDC*

*The voltage rating shown is for limited service under steady-state DC conditions. Under these conditions, the connectors operate in the corona region, and therefore have a limited service capability.

COAXIAL CABLE CONNECTOR: P/N 167-4356

Rated at 15 KVDC at any pressure altitude for limited pulse applications, provided it is mated to a suitably encapsulated panel connector. Locking bayonet sleeve coupling. Assembly: female contact soldered to cable center conductor, braid crimped to body. Use type "C" cable (P/N 167-2669).

Production Test: 100% tested at 15 KVDC for 10 seconds max. 2% lot tested at pressures from sea level to a vacuum at 21 KVDC.

MATING CONNECTOR

Rear Mount P/N 167-3295 (shown)
Front Mount P/N 167-2370

This area must be encapsulated or otherwise insulated when connector is subjected to reduced pressure, moisture or voltages above 5000 VDC.

COAXIAL CABLE ASSEMBLY: P/N 167-4358 and 167-4360

Type 310-C-310 (P/N 167-4358) cable assemblies are comprised of P/N 167-4356 connectors at both ends. Type 310-C-PT (P/N 167-4360) cable assemblies are comprised of a P/N 167-4356 connector at one end and pigtail leads at the other. Leakage at rated voltage is less than 1 microampere. Uses type "C" cable (P/N 167-2669). Soldered per MIL-S-6872.

Production Test: 100% tested at 21 KVDC for 15 seconds at a pressure altitude of 130,000 feet.

To Order: Add length desired to basic part number using a dash and "_F" for feet, "_N" for inches.
Example A: A type 310-C-310 cable 10-feet 8-inches long would be ordered as 167-4358-10F-8N.
Example B: A type 310-C-PT cable 10-feet 8-inches long would be ordered 167-4360-10F-8N.

SPECIAL CONNECTORS AND CABLE ASSEMBLIES

The connector assembly pictured at left is typical of many custom designed and produced connectors and cable assemblies produced by Reynolds Industries for critical and exacting programs for the military and space programs. If you require a special design for umbilical disconnects, interstage separation connectors or exploding bridge wire ordnance applications, we invite you to avail yourself of our twenty years of experience in this specialized field. Your inquiry is invited. The example shown is a stage separation connector produced by Reynolds Industries for a major aerospace contractor.

HIGH VOLTAGE CORONA-FREE / CONNECTORS and CABLE ASSEMBLIES

■ Up to 150 KV

■ Custom designs at no extra cost

ROWE CONNECTORS

satisfy your high-voltage interconnecting needs — commercial, industrial and military — in applications such as Laser, Power Supply, X-ray Equipment, Radar, Display Systems, Instrumentation, Avionics, RF Energy, Pulse Voltage and Many More.

STANDARDS AND SPECIALS

• Multiple contacts • Modified MS types • Coaxials • Triaxials • Miniatures • Pressurized types • Rack and Panel • Molded-on terminations • Vibration-proof types • In-line disconnects • Quick disconnects

SPECIALIZED TEST FACILITIES

To insure that connectors and cable assemblies meet rigid specifications — dielectric strength, corona inception and extinction, altitude, leakage, temperature, humidity, shock, vibration.

CONNECTOR-CABLE ASSEMBLIES

MOLDED PLUGS AND JACKS

Lab-Tronics molded assemblies are available in many variations both standard and special. Molded connectors are waterproof and provide strain relief. Standard cable jackets are smooth silver-gray non-contaminating high temp. P.V.C. Lab-Tronics can supply any type of cable assembly, lead assembly or wiring harness with molded, crimped or soldered terminations. Check with us first; we may have standard tooling for your special items.

MIX and MATCH, CUSTOMS or STANDARDS

L-T Connectors will accept almost any cable. Designs other than those listed are available. Contact us for information to meet your application. Here are a few of the many markets which are now served by LAB-TRONICS Division of Rowe Industries: **• Communications Systems & Equipment • TV-Radio-Phonographs-Stereo • Data Processing Equipment • Business Machines • Computers • Transportation • Vending Machines • Musical Instruments • Appliances.**

ORDERING INFORMATION

1. Specify Plug or Jack by part number for first end of assembly.
2. Specify wire or cable type.
3. Specify plug, jack, lug, terminal, or type of preparation (strip, split, and tin, etc.) for second end of assembly.
4. Specify overall assembly length.

SEALECTRO CIRCUIT HARDWARE

PRESS-FIT® TEFLON* INSULATED TERMINALS

Sim ly punch or drill the correct hole in a chassis or panel an nsert the "Press-Fit" terminal . . . it's in for good and wit all of the outstanding insulating properties of Teflon. "P ss-Fit" terminals are available in the most complete ac s-the-board selection of types in the industry—from mi -miniature units designed, developed and available on from Sealectro to heavy duty types especially designed fo igh current capacities.

S AND-OFFS

Ex mely wide selection of bushings, lugs, platings and fin es in micro-miniature, sub-miniature, and miniature si . One piece assembly—no additional hardware involved. Fr .073″ to .215″ diameter bushings with a variety of lug ar body configurations. 10 E.I.A. colors available.

FED-THRUS

M hined from virgin Teflon to extremely close tolerances f fast, easy and sure installation. Bushing diameters from .5″ to .218″ in over 350 micro-miniature, sub-miniature, iature, and tubular units. Available in 10 standard E.I.A. ors and dozens of terminal styles.

JACKS AND PROBES

Ideal for test points, instrument probes, jumper plugs and multiple connectors while many units are designed for printed circuit applications. Body and mating jack and probe configurations are available to fill virtually every requirement. Offered in 10 standard E.I.A. colors for ease of circuit coding.

CLOVERLEAF RECEPTACLES

Designed to allow dip-soldering of metal chassis. Unique design for three, four or more thru-leads provides multi-wire connections with each wire in a perfect capillary flow configuration for positive, uniform solder connections. "Press-Fit" chassis installation.

U.S. Pat. No. 3,193,617

SPACER/BUSHINGS

Completely eliminate the need for metal stand-offs, spacers, and insulators. Install in seconds. Specifically designed for mounting printed circuit boards on metal chassis or panels. "Press-Fit" chassis installation with "snap-on" P. C. board mounting.

NEW Rivet-Loc TERMINALS (Pat. Pending)

Rivet-Loc terminals are a new type terminal designed for insertion in either chamfered or unchamfered holes. They overcome the inherent shortcomings of older semi-assembled terminal types while providing uniform above chassis height. After bushing insertion in the chassis, the lug is inserted from the major diameter side expanding the bushing and securely locking the terminal in the chassis.

BEFORE INSTALLATION AFTER INSTALLATION

PRESS-FIT® NEW TRANSISTOR & I.C. SOCKETS & HARDWARE

OCKETS

w cost, high precision sockets for transistors and inte ated circuit packages offering "Press-Fit" installation combined with virgin Teflon bodies and precise new contact design for maximum electrical and mechanical performance. Standard units designed for 3 and 4 lead TO-18 and TO-5 packages and 8, 10, and 12 lead integrated circuit packages.

"PRESS-FIT" BUSHINGS

A complete line of over 500 standard bushing configurations designed for lead feed-thrus, insulators, bearings, stand-offs, component mounting devices and hundreds of other applications. All machined from virgin Teflon, offered in E.I.A. colors, and featuring simple economical and permanent "Press-Fit" installation.

OLDERS AND PADS

he widest line of Teflon transistor and I.C. holders and pads the industry. Available in numerous JEDEC packages with om 3 to 12 leads. Color coded and precision machined from irgin Teflon.

CONHEX® R. F. CONNECTORS

PERFORMANCE, PRICE, DELIVERY FOR RG-188/U AND SIMILAR CABLES UP TO 12.4 GHz

Conhex subminiature R. F. connectors are designed to meet or exceed the requirements of MIL-C-22557. Over 300 standard units — straight, right angle, bulkhead, strip-line, screw-on, snap-on and slide-on — are standard items.

RELIABILITY AND HIGH PERFORMANCE IN AN ECONOMICAL CONNECTOR PACKAGE

Designed for complete compatibility with miniature coaxial cables, such as .141" diameter semirigid types, the Ƶ Series offers the optimum in performance, reliability and cost. More and major manufacturers are discovering that Sealectro Ƶ connectors not only meet their VSWR and power handling requirements but are many times more reliable than similar size connectors especially when subjected to adverse environmental conditions.

FOR STANDARD MATING ENGAGEMENTS AT REDUCED COSTS.

SRM connectors are designed to mate with standard OSM-type mating engagements at reduced cost. SRM connectors are designed for use with RG-141/U, RG-142/U, RG-188/U and similar subminiature coaxial cables, and provide maximum performance and minimum VSWR all the way to 18 GHz

MAXIMUM SPACE AND PAYLOAD SAVINGS WITH PERFORMANCE TO 12.4GHz

Specifically designed for microminiature RG-196/U and RG-178/U, Nanohex connectors are the smallest commercially available. They combine extremely small size and light weight with exceptional performance and reliability. Over 50 standard types including straight, right angle, printed circuit, and bulkhead mounted units in screw-on, slide-on and snap-on are featured in the complete line.

SEALECTRO

SEALECTROBOARD®

X

CORDLESS PROGRAMMING BOARDS

"ealectroboard" programming and switching provides com-te ease and simplicity of operation with drastic reductions hardware and space. A single pin is used to complete the ogram circuit or insertion of a component . . . move the to a new location and you have a new program function. "ealectroboards" are made in 2 to 5 deck versions and with variety of pin styles such as shorting pins, diode holders d skip pins as well as with engraved or silk-screened panel arking and color coded program areas.

odular "Sealectroboard" are designed to facilitate program ard expansion in prototype and design appications and e offered off-the-shelf from Sealectro Distributors. Each odular board is a 10 x 10 matrix with two contact decks bussed upper and lower or bussed upper, individual lower contact configurations. Companion mounting and panel pieces are designed for 19" relay rack mounting and allow expansion from a single board up to 6 boards in just 5½" of rack space. Write for our complete catalog and technical specifications. . . .

ussed Upper and ower Contacts

he Modular Sealectroboard is vailable with bussed upper nd lower contacts and pro-ides an ideal means for input/ utput switching. The standard 0 x 10 hole Modular Sealec-roboard may be considered 10 ingle Pole, Single Throw, Normally Open switches with 0 inputs each.

New Miniboards

Pack a 10 x 10 hole format (100 crosspoints) into a 1 inch square. These new microminiature boards have all of the standard features of the larger size Sealectroboard, including modular, expandable construction, shorting and diode pins, and Sealectro's built in reliability.

U.S. Pat. No. 3,027,534

Bussed Upper and Individual Lower Contacts

The Modular Sealectroboard is also available with bussed upper and individual lower contacts which provide individual electrical access to each program hole and a path between many terminals and a lesser number of bussed terminals. The standard 10 x 10 hole Modular Sealectroboard with this contact configuration may be considered a 10 Pole, Single Throw, Normally Open switch with 10 positions per pole.

PROGRAM SWITCHING

SEALECTROSWITCH®

PROGRAMMING SWITCHES

Programs may be changed in seconds without special tools and with 100% reproducibility. The Sealectroswitch programming switch provides a degree of versatility that can't be met by comparable devices . . . and in half the space and half the cost. Extremely high "built in accuracies" are provided through precision machined drums while flexibility is obtained through unique, field-adjustable, sliding contact actuators. Check these features • Field Adjustable Cams With Multiple ON/OFF Functions or Point-to-Point Switches • Manual or Remote Operation With Timing Motor or Solenoid Drive • Transfer Speeds to 50 Milliseconds Without Appreciable Contact Bounce • Removable Drums • Form A, B, and C Contacts in a Single Unit • Up to 57 Circuit Controls in a Single Unit. • Contacts Rated for Dry Circuit to 2 Amps, 24 VDC or 115 VAC. • Optional 10 Amp or 20 Amp, 115 VAC U. L. Approved Contacts.

Recycling timer with point-to-point or cam action, single snap-action contact.

Enclosed, snap-action contacts and timing motor drive.

60 program positions, 60 contacts and stepping motor drive.

U.S. Pat. No. 3,330,917 Also protected by foreign patents

SEALECTRO SLIDE 'N SWITCH™

The Sealectro Slide 'n Switch circuit selector is designed to provide a highly reliable random access switching device for the programming of all types of automated equipment. Standard units are 11 position, single pole with a built-in "skip" function. If it is desired to switch from position 1 to position 5, the Slide 'n Switch handle is pulled out and the switch handle moved from 1 to 5. No electrical contact is made with any of the intermediate switch contacts.

Multiple units may be stacked side-by-side to provide any number of decade switches while the unique printed circuit board construction of the switch permits any special electrical coding to be supplied at minimum cost. Slide 'n Switch output terminations mate with standard edge-mount pc card connectors.

SPECIALTY CONNECTOR COMPANY, INC.

3560 MADISON AVENUE • INDIANAPOLIS, INDIANA 46227 / 317-787-6368

SPECIALTY CONNECTOR CUSTOM SERVICE

In addition to the standard lines of R. F. Connectors, Specialty offers custom engineering — from design through production.

SPECIALTY CONNECTOR QUALITY

A. Q. L. is organized in compliance with methods outlined in MIL-STD-105. The entire quality control program is geared to meet MIL-Q-9858 specifications.

SPECIALTY CONNECTOR PLATING FINISHES

Precious metal plating is available for all Specialty R. F. Connectors. As an added safeguard, all silver plated connectors have a tarnish inhibitor. This added safeguard in no way affects the electrical, mechanical or solderability characteristics. It extends the original luster over a longer period of time.

I. P. 23 (Instrument Plating) is a special finish that has been developed for Instrument Manufacturers where long life and appearance is a necessity. This finish has withstood more than 200 hours of sulphurated potash atmosphere with no noticeable deterioration.

WITH FAST 3 PIECE ASSEMBLY . . . MEETS MIL-C-39012, CATEGORY "A" (FIELD REPLACEABLE WITH ORDINARY TOOLS)

The old UG connectors required several cutting and stripping assembly operations demanding precise and time consuming steps to produce an electrically and mechanically sound assembly. The new "straight cut" design reduces the assembly time to a fraction of the old UG method. Provides greater mechanical strength at the cable entry, and requires no costly crimping tools to assemble. It can be completely disassembled and reused since it does not contain any rubber gaskets or crimped parts.

ASSEMBLY INSTRUCTIONS

1. Strip cable exposing only the center conductor (¼" for BNC and TNC). Tin center conductor.
2. Slide backnut over the cable and back out of the way.
3. Insert cable into the contact and shield wedging assembly so that the conical end of the assembly wedges between the shield and the cable dielectric core. The cable dielectric core and center conductor are therefore inside the unit while the shield and cable jacket ride up over the conical end of the unit.
4. The center conductor is exposed through the solder hole in the pin contact. Solder the conductor to the pin through the hole.
5. Insert the assembly into the connector body until it bottoms and the pin contact protrudes through the front insulator.
6. Thread the backnut into the body and tighten. The wedge action of the backnut against the cable jacket will provide an excellent mechanical clamp and/or strain relief.

Tooling for Teflon* Terminal Installation

Because proper tooling is an important consideration and in order to fully benefit from the application of H. H. Smith Terminals, special tools and equipment have been designed to accomplish installation to the optimum degree.

Depending on requirements, a customer may order any of the listed equipment. Smith installation tooling is designed for utmost versatility. Removable multi-usage inserting tools permit flexibility with a minimum of down time required for changeover.

MINISERT AUTOMATIC	MINISERT MK I	UNISERT
		The MINISERT Automatic **feeds** and **inserts** teflon terminals **automatically.** This **low cost** air operated device **is fast** and **simple to set up** and **operate** and will install terminals pre-packaged in the unique Mini-Pak cartridge.	The MINISERT MK I semi-automatic eliminates the high cost of installing teflon terminals. **Practical** for Lab, model shop, or production application, the full range of terminals can be installed with a maximum of five tool sets.	***ATTENTION: HIGH VOLUME USERS!*** The UNISERT Universal teflon terminal inserting system meets the specific demands of high volume teflon terminal users. The **Unisert** may be operated utilizing its pantograph frame or with its uniquely designed anvil system. The **Unisert** has proven to be a reliable production tool, operating continuously on a multi-shift basis.

TEFLON TERMINALS

QUALITY	INVENTORY	SERVICE
Herman H. Smith manufactures its teflon terminals from virgin teflon that meets or exceeds the specifications of MIL-P-19468; and the requirements of MIL-T-55155 and MIL-C-39024. All phases of the manufacturing cycle are rigidly supervised by our Quality Control Department. The end product represents the ultimate in quality and reliability.	Herman H. Smith manufactures and stocks a complete line of teflon terminals, test jacks and transistor sockets . . . all colors . . . all sizes . . . all types. GUARANTEED STOCK AVAILABLE — contact your local rep or distributor for further information on our G S A program.	Herman H. Smith's design service offers a competent engineering, development and testing facility to resolve your application and product development problems. Smith's field engineering service is nationwide. These men are thoroughly experienced and can solve your design and production problems. They are at your service — CALL THEM.

SMITH miniPAK

THE MINIPAK CARTRIDGE is designed to work in conjunction with the **Minisert Automatic.** It contains a precision, hermetically sealed "carrier band" which protects the terminals from atmospheric contaminants, eliminating the problems of solderability and shelflife.

5-way® BINDING POSTS

5 WAYS TO CONNECT • GOLD-PLATED BRASS PARTS • RANGE OF COLORS

FLUTED NUT TYPES

Plastic parts of standard (not miniature) size types molded of Lexan polycarbonate resin; brass parts are gold-plated. Rated for 30 amperes, 1000 volts working. Nickel-plated brass types available on special order.

HEX NUT TYPES

Rated for 30 amperes, 1000 volts working. Brass parts are gold-plated; plastic parts are of nylon compounded to meet military specifications MIL-M-20693A, Type IV. Nickel-plated brass types available on order.

GROUNDING TYPE

For making rapid connections to ground. Made of finely machined brass nickel-plated and polished. Panel grounding collar frozen to shaft has "D" type shoulder for locking in keyed panel hole.

MINIATURE TYPES

Fluted nut design only. Rated for 15 amperes, 1000 volts working. Gold-plated brass parts; nylon plastic parts compounded to meet military specification MIL-P-20693A, Type IV. Types with nickel-plated brass available also.

DUAL ADAPTER TYPE

Designed to facilitate line volt e connections from output recep- cles to binding posts. Has integ l parallel-blade plug. Rating is 5 amperes, 125 volts. Body is bla ; captive black and white thumbn s are mounted on ¾" centers. Br s parts are gold-plated. Ideal - safe, rigid connections to equ - ment lacking a parallel-blade pl and cord assembly.

DOUBLE ASSEMBLY TYPES

For instrument and equipme panels requiring binding pos mounted on ¾" centers. Rated f a current capacity of 30 amper and a working voltage of 1000 vol Brass parts are gold-plated; par insulators in black only. Rugge self-contained assembly mak mounting more accurate, fast and easier than two individu binding posts and gives maximu strength where connections are fr quently made.

50	PP50G	RS50G	PS50G	RP50G
100	PP100G	RS100G	PS100G	RP100G
250	PP250G	RS250G	PS250G	RP250G

†Add desired color suffix to series designation number: B (black), BL (blue), R (red), WT (white), Y (yellow), GN (green). For example: PS25GWT.

EXTRA-SAFE "L" TYPE

"L" types have all current-carrying parts insulated to remove any possibility of physical contact when making connections. Rated same as 50 ampere conventional types. When ordering, add available color suffix to type number: B (black), R (red), WT (white).

THE SUPERIOR ELECTRIC COMPANY

1000 MIDDLE STREET, BRISTOL, CONNECTICUT 06010

SEE OTHER SUPERIOR ELECTRIC PRODUCT PAGES IN SECTIONS 3500, 4000, AND 5600

ACK MOUNTING ANELS

sed for mounting tandard and miniature elephone and coaxial icks, keys, lamp ockets, etc. quivalents of W.E. nd many others vailable. Request ulletins on Product Family 70.

SINGLE and TWIN TELEPHONE JACKS

Standard and miniature size jacks. All circuit configurations. Panels for these provided by Product Family 70. Request bulletin on Product Family 51, 53, and 55 on jacks.

LAMP SOCKETS and KEYS

Mount on telephone type jack mounting panels. Sockets use telephone type slide-base lamp. Numerous varieties of turn and push keys. Request bulletin on Product Families 54 and 56.

TELEPHONE PLUGS

Nearly all types, W.E., Kellogg, A.E., etc. both single and twin in two and three circuit forms. All have molded in place nylon insulation. Request bulletins on Product Family 80.

TRIMM'S

Full Line

TERMINAL and RELATED PATCHING EQUIPMENT —and HEADSETS

Available from our industrial distributor in your area.

AUDIO PATCH, SWITCHBOARD, and TEST CORDS

With standard and miniature size single and twin telephone plugs. Nylon braided tinsel conductor cords. Request bulletin on Product Family 30.

COAX JACKS — PLUGS — PATCH CORDS — and RELATED COMPONENTS

Standard sized single and twin jacks including normal through and terminating types, W.E. and RCA compatible, fitting wide assortment of coax cables and other connectors. Twin looping plugs, single plugs, plug adapters, patch cords, etc. Also specialized triax and twinax concentric series jacks and plugs as well as miniaturized type. Request bulletin on Product Family 60.

HEADSETS

Many types in all cost ranges, applicable to wide variety of applications. Request bulletin on Product Family 01 through 29.

AUDIO PLUGS and JACKS

Numerous low cost plugs and jacks for hi-fi, tape recorders, sound equipment, etc. Request bulletin on Product Family 40.

TERMINAL BLOCKS

Originally used by the telephone industry (often called Christmas Tree type) now also widely used in other system work. Up to 14 rows per block; 10, 20, and 26 terminals per row. Lug types — solder, wire-wrap, and hybrid solder-wire wrap. Request bulletin on Product Family 35.

TRIMM INC. P.O. BOX 489 — LIBERTYVILLE, ILLINOIS 60048 312-362-3700

Patching & Switching

Coax/Twinax/Triax

The above components are available in coaxial standard sizes as well as coaxial miniature and Western Electric type miniature. Twinaxial and Triaxial systems are also available and recommended where ground loops, magnetic fields and capacitive fields are a problem.

Patch Panel Configurations

Standard Panels: 12, 14, 20, 24, 26, 36, 40, 48, 52 holes
Miniature Panels: 32, 64, 96 holes
JS = alum. panel (common ground)
JSI = insulated panel

Panel Jacks (coaxial)

Jacks that accept either .070″ pins (RCA) or .090 pins (W.E.)—rear mating with UHF, BNC, cable input, C, TNC, N and miniature TPS plugs

Also available: self terminating or normalling jacks

Twinax/Triax Connectors & Cable

Plugs, Receptacles, Feed thrus and Panel Jacks

¼″ dia. 50, 75, 78, 124Ω twinax/triax cable

Video and Data Switching Systems

Coax Switch 3 x 2

Twinax/Triax Matrix 1 x 6

Matrices: Remotely programmable switching devices wherein any input can be connected to any output. Available in either x, y plane or x, y, z format. Isolation up to 110db @ 60 MHz

Switches: Multi-pole, multi-throw formats up to 20 poles, 20 throws in coax or twinax
Made to customer specifications

Rack and Panel Connectors

I-SERIES - Miniature

umber of contacts: 7, 12 (8-4), 14, 18, 20, 21, 26, 34, 41, 50, 75
aximum wire size: #20 AWG wire
oltage breakdown etween contacts — ea level: 3000V. A.C. RMS.
urrent rating: 7.5 amps.
I-SDL (solderless): uses #37 taper receptacle
lso available for #18 AWG. Wire. • Flexible Plastic Dust Covers available.

MI-BSL "FBI" SERIES - Miniature Bracket Screw Lock

Floating Body Isolation

Number of contacts: 34, 41, 50, 75.
Maximum wire size: #20 AWG wire.
Voltage breakdown between contacts — sea level: 3000V. A.C. RMS.
Current rating: 7.5 amps.
Hoods: aluminum anodized.
Brackets: die-cast aluminum.
MI-BSL-SDL (solderless): uses #37 taper receptacle.
Patent Nos. 2,761,108, 2,845,603, 2,845,604.
Additional Patents Pending. Also available for #18 AWG. Wire.

MI SERIES - Miniature
MI-SL SERIES - Miniature Screwlock

imilar to MI & MI-SL Series except: End Holes of 7 hru 26, & 41, and Center Holes of 34 thru 104 ave Square Shape, for MS Hardware).
umber of contacts: 7, 9, 8-4, 14, 18, 20, 21, 26, 34, 41, 42, 50, 75 & 104.
ire sizes accommodated: No. 20 A.W.G. (No. 18 on special order).
in diameter: .040
urrent rating: 7.5 amps., max.
est voltage, between contacts, sea level: Meets MIL-C-008384C requirements.
Contact options: Closed-entry, dip solder (.038 or .025 dia), turret.
Hardware: MS18194, MS18195, MS18196, MS18197 and MS Hoods (shields), all per MIL-C-008384C or its successor.
Guide pins and guide sockets: Many alternates.
Connectors and hardware qualified to MIL-C-008384C.
IMIs interchangeable with their counterparts in MI, REMI, and URC (size 20 contact) SERIES.
Patent No. 2,761,108. • Request Catalog IMI.

Floating Body Isolation

MI-BMSL SERIES Miniature Bracket Modular Screw Lock

Number of contacts: 123, 150, 225.
Maximum wire size: #20 AWG wire.
Voltage breakdown between contacts — sea level: 3000V. A.C. RMS.
Current rating: 7.5 amps.
Hoods: aluminum anodized.
Brackets: die-cast aluminum.
MI-BMSL-SDL (solderless): uses #37 taper receptacle.
Patent Nos. 2,761,108, 2,845,603, 2,845,604. Also available for #18 AWG. Wire.
Additional Patents Pending

MI-KSL SERIES
Miniature Hoodless Knob Type Screw Lock

Number of contacts: 7, 12 (8-4) 14, 18, 20, 21, 26, 34, 41, 50, 75.
Maximum wire size: #20 AWG wire.
Voltage breakdown between contacts — sea level: 3000V. A.C. RMS.
Current rating: 7.5 amps.
MI-KSL-SDL (solderless): uses #37 taper receptacle.
Patent No. 2,761,108. • Also available for #18 AWG. Wire.

HMI-SL SERIES
Hermetic Seal Miniature Screwlock

Number of contacts: 7, 12 (8-4), 14, 18, 20, 21, 26, 34, 41, 50, 75.
Voltage breakdown between contacts — sea level: 2200V. A.C. RMS, MIN.
Current rating: 7.5 amps.
Mates with corresponding MI-FSL (female) series connectors.
Also available in Draw-Pull Type. Mates with MI-F (female) Series Connectors.

MI-SL SERIES
Miniature Screw Lock

Number of contacts: 7, 12 (8-4), 14, 18, 20, 21, 26, 34, 41, 50, 75.
Maximum wire size: #20 AWG. wire.
Voltage breakdown between contacts — sea level: 3000V. A.C RMS.
Current rating: 7.5 amps.
MI-SL-SDL solderless): uses #37 taper receptacle.
Patent No. 2,761,108. • Also available for #18 AWG Wire.

REMI® SERIES
Standard and Screwlock

Number of contacts: 7, 12 (8-4), 14, 18, 20, 21, 26, 34, 41, 42, 50, 75, 104.
Type of contact: crimp style, removable with "snap-in, snap-out" feature.
Wire sizes accommodated: #14, #16, #18, #20, #22, #24, #26, #30 AWG and sizes #16 down to #32 per MIL-W-16878,
Snap-In . . . Snap-Out Contacts REMI Hand-Operated,* Pneumatic and Semi-Automatic Crimping Tools Available.
Patent No. 2,979,689 & 6 International Patents.
Contacts available meeting MS18134, MS18136, per MIL-C-23216, latest.
All sleeves meet MS18135. Insertion and Removal Tool Meets MS18137.
Request Catalog REMI.
* MIL-T-22520 latest rev.

Rack and Panel Connectors

MIW SERIES

Miniature Rectangular Power Connectors

(Similar to MI Series except .062 dia. contact)

Number of contacts: 7, 9, 11, 14, 18, 20, 21, 26, 34, 41, 42, 50, 75, 104.

Pin diameter: .062

Wire sizes accommodated: up to #16 AWG.

Current rating: 13 amps., max.

Breakdown voltage between contacts — sea level: 2000V. A.C., RMS.

Connectors meet applicable provisions of MIL-C-8384, latest revision.

ANYCON* Connectors

URC and URC-SL SERIES

Number of contacts: 9, 14, 18, 20, 26, 34, 42, 50, 66, 75, and 104.

Maximum wire size: #16 AWG.

Voltage breakdown between contacts — sea level: 2950V. A.C. RMS.

Current rating: 13 amps.

Contac size (standard): 20 & 16.

Shielded coax contacts: See list below.

Contacts — Removable, crimp-type. Socket closed entry type: See list below.

Order contacts separately.

Connectors meet MIL-C-22857, latest revision. Also commercial.

Both draw-pull and twin screwlock types available, with or without hood or shells.

Crimping tools, insertion and removal tools available.

Patent No. 2,761,108. UNDERWRITERS' LABORATORIES APPROVED

* ANY CONtact, std. size 16 or 20, or shielded coax in ANY CONtact position

Request Catalog URC.

XMI Protective Shells for MI SERIES
XIMI Protective Shells for IMI SERIES
XREMI Protective Shells for REMI SERIES
XURC Protective Shells for URC SERIES

Number of contacts: 7, 14, 18, 20, 26, 34, 42, 50, 75, 104.

Material: Top quality aluminum, per Fed. spec.

Meet latest revision MS17775 unless otherwise specified.

Anodized per latest revision MIL-A-8625, or special conductive finishes on request.

Used on plugs and receptacles, all draw-pull or screwlock types.

Polarization optional, at specified position.

For 9 & 66 contact shells, write factory.

Request Catalog IMI, REMI, or URC.

URC ANYCON CONTACTS

STANDARD, CONTACT SIZE 16 † ‡

MS17803-16-16 Pins for wire sizes 16, 18, 20 AWG.
MS17803-16-20 Pins for wire sizes 20, 22, 24 AWG.
MS17804-16-16 Sockets for wire sizes 16, 18, 20 AWG.
MS17804-16-20 Sockets for wire sizes 20, 22, 24 AWG.

† Qualified against MIL-C-23216.

‡ Available also in contact size 20 for wire sizes 16 thru 30 AWG.

SHIELDED 'COAX',* CONTACT SIZE 16

MS18232-1 Pins for RG-178B/U & RG-196A/U cable.
MS18233-1 Sockets for RG-178B/U & RG-196A/U cable.
MS18265-1 Sockets for RG-161/U, RG-179B/U, & RG-187A/U cable.
MS18265-2 Sockets for RG-174/U, RG-188A/U, & RG-316/U cable.
MS18266-1 Pins for RG-161/U, RG-179B/U, & RG-187A/U cable.
MS18266-2 Pins for RG-174/U, RG-188A/U, & RG-316/U cable.

* For government end use.

Crimping tools per MIL-T-22520 (latest) and/or MS drawing requirements. Hand, semi-automatic, and automatic.

Request Catalog URC.

980 SERIES

Power Guide Pin Spring Release

Number of contacts: 12, 18, 24, 34.

Maximum wire size: #16 AWG. wire.

Voltage breakdown between contacts — sea level: 4600V. A.C. RMS.

Current rating: 13 amps.

980-SDL (solderless): uses #53 taper pin.

Patent No. 2,658,182. Request Catalog 980-990.

980-SL SERIES

Power Screw Lock

Number of contacts: 12, 18, 24, 30.

Maximum wire size: #16 AWG. wire.

Voltage breakdown between contacts — sea level: 4600V. A.C. RMS.

Current rating: 13 amps.

980-SL-SDL (solderless): uses #53 taper pin.

Patent Nos. 2,658,182, 2,761,108.

Request Catalog 980-990.

990 and 990-S (Short Contacts) SERIES - Power

Number of contacts: 7, 10, 15, 18.

Maximum wire size: #16 AWG. wire.

Voltage breakdown between contacts — sea level: 4000V. A.C. RMS.

Current rating: 13 amps.

990-TU (Turret type).

Request Catalog 980-990.

990-SL SERIES

Power Screw Lock

Number of contacts: 7, 10, 15, 18.

Maximum wire size: #16 AWG. wire.

Voltage breakdown between contacts — sea level: 4000V. A.C. RMS.

Current rating: 13 amps.

990-TU (Turret type).

Double Lead threads, "Twice the speed with Double Lead."

Patent No. 2,761,108. Request Catalog 980-990.

THE REMI CONCEPT

Removable • Closed Entry • Crimp Type Contacts — Mechanical Stresses Confined between METALLIC Elements.

REMI Connectors Mate with REMI, MI, or URC (with .040 Dia. Contact) Series.

ack and Panel Connectors & Edgeboard P.C. Connectors

I SERIES - Subminiature

mber of contacts: 5, 7, 11, 14, 20, 26, 29, 34, 42, 50, 75, 104.
ximum wire size: #20 AWG. wire.
ltage breakdown between contacts — sea level: 1950V. A.C. RMS.
rrent rating: 7.5 amps.
so available with closed entry contacts — CSMI Series.
MI Protective Shells available for all types. Request Catalog SMI.

UMI SERIES - Ultraminiature Draw-Pull & Screwlock

Number of contacts: 5, 7, 9, 11, 14, 20, 26, 29, 34, 44, 50.
Maximum wire size: #22 AWG. wire.
Voltage breakdown between contacts — sea level: 1800V. A.C. RMS.
Current rating: 3 amps.
Patent No. 2,761,108.
ALSO AVAILABLE WITH:
Closed Entry Contacts: CUMI Series.
Removable Crimp Contacts: RUMI Series.
.025 D. Pin and Socket: SSMI Series.
Request Catalog UMI-RUMI.

MI-HSL - Subminiature Hooded Screwlock
MI-KSL - Subminiature Hoodless Screwlock (Not Shown)

Number of contacts: 5, 7, 11, 14, 20, 26, 29, 34, 42, 50, 75, 104.
Maximum wire size: #20 AWG. wire.
Voltage breakdown between contacts — sea level: 1950V. A.C. RMS.
Current rating: 7.5 amps.
Also available with closed entry contacts — CSMI-SL Series.
Patent Nos. 2,761,108 & 3,030,602. Request Catalog SMI.
XSMI Protective Shells available for all types.

MH SERIES Miniature Hex

Number of contacts: 4, 5, 7, 9
Current rating: 7.5 amps.
Maximum wire size: #20 AWG. wire.
Voltage breakdown between contacts — sea level: 1215V. A.C. RMS.
Voltage breakdown contacts to ground: 1785V. A.C. RMS.
MH-SDL (solderless): uses #37 taper receptacle.
ALSO AVAILABLE FOR #18 AWG. WIRE
Patent No. 2,848,702.

UPCR SERIES Single Row Printed Card Receptacle

Number of contacts — (Phosphor Bronze): 6, 10, 15, 18, 22.
Solder wire hole size: .05 x .12.
Voltage breakdown between contacts — sea level: 2500V. A.C. RMS.
Current rating: 5 amps.
Also available on .125 centers 28 contacts UP4CR-28. For beryllium copper contacts add prefix "B" before cat. no.
Polarizing pins and contacts — snap-in or out design permitting easy interchangeability.
Patent No. 2,835,689. Request Catalog UPCR.
Connectors meet MIL-C-21097, latest revision.

UPCR-D - Double Row Printed Card Receptacle - Solder Type Terminals

Card range thickness accommodation:
UPCR-D: .058 - .072 (nom. 1/16")
UPCR-93D: .080 - .104 (nom. 3/32")
Number of contacts (Phosphor Bronze*): 6, 7‡, 10, 15, 18, 22 per row, (2) rows.
Solder wire hole size: .05 x .12.
Voltage breakdown between contacts — sea level: 2500V. A.C. RMS.
Current rating: 5 amps.
Both bifurcated and non-bifurcated contacts available.
Polarizing pins and contacts — snap-in or out design permitting easy interchangeability.
* For beryllium copper contacts add prefix "B" before catalog number.
‡ Molded in polysulfone, one of the strongest, most heat-resistant, self-extinguishing thermoplastics available. Excellent electrical properties. For availability of other items in polysulfone, contact factory.
Patent No. 2,909,755. Request Catalog UPCR.
Connectors meet MIL-C-21097, latest revision.

UPCR-DTLP - Single Row Dual Linked Contact

UPCR-DLTP: Uses #53 taper pins.
Card Range thickness accommodation: .052 - .072 (nom. 1/16")
Number of contacts (Beryllium Copper): 18, 22.
Voltage breakdown between contacts — sea level: 2500V. A.C. RMS.
Current rating: 5 amps.
Tails locked in place with stainless steel retaining ring which controls retention force on the #53 taper pins accepted by contacts.
Request Catalog UPCR.

MIWC SERIES - 104 Contact Center Screwlock Plugs & Receptacles

Connector type: Rack and panel.
Contact types: 0.062 dia. pin and mating closed-entry socket.
Contact spacing: 0.150 center-to-center.
Current rating: 13 amps. max. 10 amps cont.
Voltage breakdown between contacts — sea level: 3000V. A.C. RMS.
Solder cup: 0.073 dia. for #16 AWG. max. wire.
Available versions: MIWC-104M2SL, MIWC-104F2K (illustrated above); MIWC-104M2K, MIWC-104F2SL

CONNECTOR TYPES AVAILABLE:

Rack and Panel
Plug and Receptacle
Edgeboard
Two-Piece Printed Circuit
High Density
Test Point
Miniature Hexagonal
Circular
Zero-Entry-Force P.C
Hermetically Sealed

U.S.C. Manufacturers' Connectors and/or Contacts Meeting or Exceeding All Applicable Provisions of Latest Revision of:

Quality Control to Latest Revision of MIL-Q-9858, MIL-I-45208, NASA NPC200.
Calibration Per MIL-C-45662 Traceable to National Bureau of Standards.

THE REPC CONCEPT (Mechanical Stresses Confined Between METALLIC Elements)

(REPC-F32 Shown)

Two-Piece P.C. Connectors & Removable Crimp Contact Connectors

UPCC-M & F SERIES
Printed Circuit Connectors & Mates (Meet MIL-C-23353/1, 2, & 3 and NAS 713, 714, 715)

Contact spacing: 0.156.
Number of contacts: 7, 11, 15, 19, 23, 32.
Male dip solder. Card range thickness accommodation:
UPCC-M( ) A, B, or C: 1/16", 1/8", or 1/4".
Female UPCC-F( ): Max. #20 AWG. wire.
Female dip solder terminals. UPCC-FDN( ).
Current rating: 7.5 amps.
Voltage breakdown between contacts — sea level: 2500V. A.C. RMS.
REPC-F series also mates with UPCC-M series.
Request Catalog UPCC-REPC.

UPCC-SL SERIES - Printed Circuit Screwlock & Mate
UPCC-SLH SERIES Hooded Screwlock & Mate

(Meet applicable provisions of MIL-C-23353 & NAS-713, 714, 715)
Contact spacing: 0.156.
Number of contacts: 7, 11, 15, 19, 23, 32.
Current rating: 7.5 amps.
Voltage breakdown between contacts—sea level: 2500V. A.C. RMS.
UPCC-SL
UPCC-M2K-( ) A, B, C for 1/16", 1/8", 1/4" P.C. or — E for solder eyelet.
UPCC-F2SL-( ) for #20 max. AWG. wire or — TU for turret terminals.
UPCC-SLH
UPCC-M2SL-( ) A, B, C for 1/16", 1/8", 1/4" P.C. or — E for solder eyelet.
UPCC-F2HSL-( ) for #20 max. AWG. wire or — TU for turret terminals.
Patent No. 2,953,767. Request Catalog UPOC-REPC.

UPCC-SGM & SGF SERIES - Printed Circuit Connector & Mates (Meet MIL-C-23353/4, 5 & 6)

Contact spacing: 0.100
Number of contacts: 11, 17, 23, 29, 35.
Male dip solder. Card range thickness accommodation:
UPCC-SGM( ) A, B, or C: 1/16", 1/8", or 1/4".
Female dip solder terminals. UPCC-SGFDN( ).
Current rating: 7.5 amps.
Voltage breakdown between contacts — sea level: 2360V. A.C. RMS.
REPC-SGF series also mates with UPCC-SGM series.
Request Catalog UPCC-REPC.

TWO UNIT UPCC - 19 Pin Shielded Connectors with Coaxial Contacts

The male connectors meet all applicable provisions of the latest revisions of MIL-C-23353 and MIL-C-23353/6.

The female connectors meet all applicable provisions of the latest revisions of MIL-C-23353 and MIL-C-23353/4.

COAXIAL CONTACTS: High mating retention type plug with socket of top quality beryllium copper, gold over nickel plated. Receptacle with .031 nom. dia. pin of top quality beryllium copper, gold over nickel plated. Plug and receptacle are of snap-lock mounting type and are for use with RG180/U or RG195/U cable (Ref.).
Request Catalog UPCC-REPC.

REPC-F SERIES - Female Chassis Connector (Meet applicable provisions of MIL-C-23353/9)

REPC-F( ) Connectors Mate with UPCC-M( ) Connectors.
Type of Contact: Removable ("snap-in, snap-out") crimp type, closed-entry.*
Contact spacing: 0.156.
Number of contacts: 7, 11, 15, 19, 23, 32.
Wire sizes accommodated: #14, #16, #18, #20, #22, #24, #26, #30 AWG. wire and sizes #16 down to #32 per MIL-W-16878.
Crimping tools: Hand-operated MIL-T-22520C and MS, also pneumatic and semi-automatic types.
Current rating: 7.5 amps.
Voltage breakdown between contacts — sea level: 2500V. A.C. RMS.
Patent No. 2,979,689 & 6 International Patents.
* Contacts meet MS18134 } per MIL-C-23216
* Sleeves meet MS18135 }
Request Catalog UPCC-REPC.

REPC-SGF SERIES - Female Chassis Connector (Meet applicable provisions of MIL-C-23353/10)

REP-SGF( ) connectors mate with UPCC-SGM( ) connectors.
Type of contact: Removable ("snap-in, snap-out") crimp type, closed-entry.*
Contact spacing: 0.100.
Number of contacts: 11, 17, 23, 29, 35.
Wire sizes accommodated: #14, #16, #18, #20, #22, #24, #26, #30 AWG. and sizes #16 down to #32 per MIL-W-16878.
Crimping tools: Hand-operated MIL-T-22520C and MS, also pneumatic and semi-automatic types.
Current rating: 7.5 amps.
Voltage breakdown between contacts — sea level: 2360V. A.C. RMS.
Patent No. 2,979,689 & 6 International Patents.
* Contacts meet MS18134 } Per MIL-C-23216, latest revision.
* Sleeves meet MS18135 }
Request Catalog UPCC-REPC.

MIG SERIES
Right Angle Plug & Receptacle Connectors

Contact spacing: 0.100.
Number of contacts: 11, 15, 23, 37.
Male dip solder. Card range thickness accommodation.
MIG-M: from 1/32" to 1/4".
Female. MIG-F: Max. #20 AWG. wire.
Current rating: 7.5 amps.
Voltage breakdown between contacts — sea level: 1060V. A.C. RMS.
Request Catalog MIG-WG-RWG.

WG-37M - Connector Plug, Right Angle .100 Grid P.C.
RWG-37F - Mating Receptacle, Crimp Removable Contacts

Number of contacts: 37.
Wire sizes accommodated: #14 to #30 AWG.
Dielectric withstanding voltage between contacts: 1500V. D.C. at sea level.
Current rating: 7.5 amps., max.
WG-37M: is screw mounted. **WG-37MR:** is rivet mounted.
RWG-37F: uses MS18134 contact & MS18135 sleeve of MIL-C-23216 latest rev., and other REMI contacts.
Crimping tools: per MIL-T-22520 latest, and commercial. Hand, semi-automatic and automatic.
Patent No. 2,979,689 & 6 International Patents. Request Catalog MIG-WG-RWG.

Miscellaneous Connectors

RG-M1SL-WW - Connector Plug, Wire rapped Terminals
RG: FIK-BC - Mating Receptacle, Crim Removable Contacts
200 .200 contact grid spacing

Num of contacts: 50.
Pin meter: .062.
Male erminals: .045 square, wire wrapped ty
Fem contacts (ordered separately): Meet M 7804-16-16 of MIL-C-23216 latest.
Wir ccommodation: #16, #18, #20 AWG.
Brin ng Tools: per MIL-T-22520 latest, and c mercial. Hand, semi-automatic and a matic.
Cur t rating: 13 amps., max.
Die tric withstanding voltage, between con- ts — sea level: Depends upon wire s used on males.
Co ctors meet all applicable provisions of L-C-22857, latest revision

---

GR-100MISL-WW Connector Plug, Wire-Wrapped Terminals
RGR-100FIKL-CC - Mating Receptacle, Crimp Removable Contacts
.100 x .100 contact grid spacing

Number of contacts: 100.*
Pin diameter: .030.
Male terminals: .025 square, wire wrapped type.
Female contacts (ordered separately) wire accommodation: #22 thru #26 AWG.
Crimping tool: MS3198-1 per MIL-T-22520, latest revision.
Current rating: 5 amps., max.
Dielectric withstanding voltage, between contacts — sea level: Depends upon wire sizes used on males.
Contacts meet applicable provisions of MIL-C-23216, latest revision.
Connectors meet applicable provisions of MIL-C-8384, latest revision.
Patent No. 2,761,108.
*Also 20, 40, 60 and 80.

NO SERIES

Nu er of contacts NOG-( )F: 5, 10, 55.
Nu er of contacts NOG-( )M: 1, 2, 4, or 5.
Co act size 20: .040 dia.
P dip solder terminals: .020 dia.
Cu ent rating: 5 amps, continuous.
Vo ge breakdown between nearest contacts sea level, normal m idity: 3000V. A.C. RMS.

Side Mounting Miniature Connectors

Number of contacts: 4 or 6.
Pin diameter: .040.
Wire sizes accommodated: #20 to #22 AWG.
Current rating: 7.5 amps., max.
Voltage breakdown, between contacts — sea level: 2000V. A.C., RMS.
Many polarizations available (males and females in same connector body).

MG-4M & F **MG-6M & F**

-25M - Connector Plug Right gle .100 Grid P.C.
-25F - Mating Receptacle, der Eyelet Terminals

nber of contacts: 25.
, thicknesses accommodated: 1/16", 1/32", 5/32".
diameter: .040.
rent rating: 5 amps. continuous.
erating voltage — sea level: 900V. A.C. RMS.
male contacts: Solder eyelet accepts 2 #20 AWG. wires.
larized foolproof assembly. Blind alignment.

960-16M - Power Connector Plug
960-16F - Mating Receptacle
960-16FT - Mating Receptacle (Anti-Rotation Contacts)

Number of contacts: 16.
Pin diameter: .094.
Male contacts, removable, dual wiring holes.
Female contacts, removable crimp type.
Wire sizes accommodated: #12 thru #20 AWG.
Current rating: 23 amps.
Polarization contacts available.
Breakdown voltage, between contacts — sea level: 6000V. A.C. RMS.

TP-16 and UTP-S5 - Test Point Connectors

TP-16
umber of contacts: 16.
ocket contact: accepts standard .080 dia. test probe and retains probe with spring pressure. Pin end of contact is .030 dia.
urrent rating: 5 amps., max.
reakdown voltage, between contacts — sea level: 3500V. A.C. RMS.

UTP-S5
Number of contacts: 5, button type.
Pin end of contact: .030 dia.
P.C. board accommodated: 3/32".
Current rating: 5 amps., max.
Voltage rating: 600V. A.C. RMS.
Test voltage — sea level: 1800V. A.C. RMS.

ZERO-ENTRY-FORCE CONNECTORS
Built to Customer Specifications

TYPICAL:

1.) (Illustrated). Z-E-F connector used in advanced computer applications involving maximum packaging density. Allows use of 3 edges of master printed circuit card for inputs and outputs. All connections are made mechanically and simultaneously by means of a cam-actuated device. Available in many configurations of connectors with from 56 to 520 contacts.

2.) (Not Illustrated). Z-E-F connector used in test set-up for special electronic modular components. Manual control levers are snapped closed, gently pressing the contacts against the module's pins for the test. Connectors come in 4 sizes (52 or 62 contacts), 3.6 in. long by 2 to 2.5 in. wide.

Write us about your requirements.

U.S. TERMINALS INC.

7502 Camargo Road, Cincinnati, Ohio 45243, Phone 513 561-8145 TWX 810-461-22

SLIP LOCK® terminals

No hole chamfering is ever required. Patented single-piece terminals can be inserted from either side of your chassis or card and lock in place under simple pressure. Reliability is unparalleled.

PRESS TYPE terminals

Press type terminals also are immune to mechanical shocks and vibrations and are suitable for all metal chassis applications. Electrode pins meet the latest exacting military specifications.

PRINTED CIRCUIT terminals

Bulletin 6802

Available in brass or high-conductivity copper to meet the most exacting requirements. Precision machining assures trouble-free installation and service. Controlled heat treating and plating guarantee excellent solderability. Special designs are available.

PRINTED CIRCUIT test jacks

Bulletin 6802

Printed Circuit Sockets/Test Jacks offer new flexibility and compactness in printed circuit design. Suitable for test point jacks, min. tube sockets, module sockets, diode and transistor sockets and stacking P.C. boards.

GROUNDING terminals

Made to the same high standards as the above designs, grounding terminals are one-piece brass units, knurled or threaded for inserting or bolting to the metal chassis.

BELT LINE transistor sockets

Bulletin 6901

Easy installation sockets have beryllium copper age hardened receptacles; fit standard/existing mounting hole sizes. No chamfer necessary! Shoulder on pin at insulation prevents cold solder joints, pin extensions can be bent without cracking. "D" cross section prevents rotation. Teflon insulation is used. Lowest cost, highest quality sockets available. Special designs available, also Press Type Sockets.

High Voltage connectors

Bulletin 6804

HV Miniature Connectors offer precise contact design, precious metal plating and Teflon insulation. Optimum creepage path for high-voltage use is engineered to meet MIL-C-8384. Breakdown voltages to 18,000 vdc.

U.S. TERMINALS

U.S. Terminals products are manufactured under one or more of the following patents: U.S.—3349365, 3095470, 3267205, 3244801; British—972756; Canadian—729317. Other patents applied for.

VECTOR PATCHBOARDS

REMOVABLE PANEL PRE-PROGRAMING TYPE

- Guaranteed Post Patching Capability Without Contact Damage
- All connections make and break simultaneously
- Mount In any position for space conservation

PPB600 with RP600 BLKA Panel.

Reliable, low cost, Vector Pre-Programming Patchboard units function like a multiple contact switch to engage and disengage up to 1200 contacts simultaneously with a single lever action. The units are most useful where: 1. Maximum flexibility of connection arrangements is required. 2. A variety of connection setups must be changed quickly and without error.

Wiring tabs are supplied standard for solder or solderless slip-on contact, or for wire wrap. Contact springs are beryllium copper heat treated for long life, nickel plated or gold flashed.

Solderless Slip-On Contact

1723/1 fits Pre-Programming Patchboards

Fixed Panel style Patchboards provide reliable low cost single conductor patching on control and test panels where pre-programming is not required. Low resistance beryllium copper, gold flashed contacts are independent wrap-around type and located on .265″ centers.

Single wire, piggy-back, splits, and jumper type programming patch cords are available. Permanent connections are made by soldering wires or using solderless slip-on contacts, 1723-41 crimped to wires on the rear of the boards. Boards listed have standard white alpha-numeric markings front and back and brackets are furnished as standard.

Special Sizes

Larger contact systems can be made by mounting standard panels adjacent. Special sizes up to 2200 contacts are readily made to order at minimum cost. Special marking and screening in colors are also available. Insulation material is black phenolic .093″ thick. Terminals are beryllium copper, heat treated, nickel plated gold flashed per QQS-365. Plug tips are nickel plated brass and if so specified, gold flashed.

ADD-A-POINT Terminal Blocks

Medium Duty 600v, 5000 Series — Insulated moldings are of thermosetting phenolic material, Type CFG. Brass screw type connectors can be supplied with choice of box, pressure or screw type contacts. Pressure type features exclusive "Sure Grip" pressure pad design to insure against damage to the wire. **Series may be direct or channel mounted.**

Model 5200

Heavy Duty 600v, 6000 Series — Material specification same as 5000 Series. Electrical specifications allow use of up to #4 wire with box type contacts. Available with either painted or plain marking surfaces.

Model 6200

Miniature Medium Duty 600v, SM Series — Moldings are of thermosetting phenolic CFG material. Offering a low silhouette, these miniature blocks require less clearance than the conventional blocks. Available in box type, with or without pressure pad, or conventional screw contact. For service up to 40 amp.

Model SM

Heavy Duty 600v, P Series — Molded with the same material as above models, this larger series is rated up to 60 amp service. Available with box, pressure type or screw contacts of pure electrolytic copper. Like other models, the P Series is available for channel or direct mounting.

Model P

FAST-TAB Barrier Terminal Strips

UNITED TECHNICAL PUBLICATIONS

Patchboard Programming Systems and Accessories

Fixed Systems —26 standard models ranging from 30 contact points to 7,188 combine reliability and economy to meet a wide variety of programming needs primarily in industrial controls and communications.

Lever Lock Systems —are most utilized by large computer manufacturers. A lever provides the necessary force to simultaneously mate up to 680 patchcord tips and paddle contacts. A smaller model offers 252.

Shielded Systems —Each paddle contact is isolated with metal shielding. Crosstalk reduction is 92 db at 1000 cycles, 100 volts peak to peak. There are six models ranging from 360 to 4200 contacts.

True Thru-Shielded Systems —offer individual shielding, matched impedance, VSWR of 1.01 from 100 MHz to 500 MHz. These advanced programming systems can be manufactured to virtually any specifications.

Roll Cam Systems —offer greatest capability and reliability, large number of contacts (24 sizes from 48 to 5120 contacts). Camming action engages full patchboard gently and accurately, multiple wiping action optimizes connections.

Drawer Type Systems —a roll cam designed for horizontal mounting to save up to 50% in panel areas. Also provides R.F. shielding. Five standard sizes range from 480 to 1870 contacts. All fit 19"-wide racks.

Plating—Nickel or Gold
Board Material—Phenolic or Diallyl Phthalate
Contact Diameters—.093 and .053
Connections—Solder, wire wrap or Locktite
Finish—clear polish or black anodized
Silk Screen—Alpha/numeric grid or special designs
Patchcords—Manual or fixed; single tip to nine-prong tip; squids; splits; shunts.
All unconditionally guaranteed.
Tools—a variety of 27 tools for crimping, extraction, insertion, and paddle contacts.

ACCURFRAME®

The AccurFrame® system is the simple yet accurate positioning of precision molded Wire-Wrap connectors onto a metal frame. This technique offers substantial cost reduction, versatility of application and flexibility of design for automatic wire wrapping.

The heart of the AccurFrame packaging is our HW Series of Wire-Wrap printed circuit connectors. Designed for .062 printed circuit cards, the connectors are precision molded of diallyl phthalate with contact spacings of .100 x .200 inches or .125 x .250 inches. The contacts are bifurcated phosphor bronze with gold over nickel plating. The terminal posts are .025 inches square and have been designed to MIL-STD-1130. Post ends are flat within .020 inches of true position, and each post will accept up to three #30 AWG solid wires. Correct post alignment and retention is assured in the body of the connector by twisting the terminal a full 90 degrees.

Standard AccurFrames are available for off-the-shelf delivery. Custom designs and configurations can be made to order.

RACK AND PANEL CONNECTORS

The following chart indicates our broad range of standard rack and panel connectors, available in a wide variety of dielectrics. Many were developed for and qualify under Mil-C 008384 and Mil-C 22857.

Type of Connector	Current Rating (range)	No. of Contacts (range)	Max. Wire Size (Stranded)	Protective Types	Termination Types*	Series
Miniature	7.5–13 amps	7–104	No. 16	Yes	S.D.	MRA, MRE, XMRA, XMRE, SA, QRE

Electronics

many non-standard problems.

RF CONNECTORS

Winchester Electronics offers the complete line of Radiall coaxial connectors. These include standard BNC, TNC, Type N (Mil-C 39012), SMA, SMB, SMC, UG and miniatures (Mil-C 22557), as well as the proprietary miniQUICK and SUBLOCK Series of quick disconnect high performance connectors.

Winchester Electronics also offers full capability to design and produce special RF and High Voltage connectors to customer requirements.

The miniature and sub-miniature series is finished with a heavy gold plate. The standard series is plated with NSR, a patented nickel base finish providing better physical characteristics than standard nickel plating.

All connectors are machined to close tolerances, are rack plated, and provide superior electrical performance at competitive prices.

CLASS DEFINITION

Class M—Designed to meet military requirements as to materials, plating and performance.
Class I—Same as Class M except for reduced plating.
Class C—Economical non-military applications.

See YELLOW SECTION for Local Offices, Phones

PLUGMOLD® MULTIOUTLET SYSTEMS FOR ELECTRONIC APPLICATIONS

Plugmold systems: the versatile, efficient way to organize electrical wiring and devices

To contain power wiring — along with a variety of outlets, switches, jacks, circuit breakers and other devices — use versatile Plugmold systems. Rugged, attractive Plugmold systems accommodate 14 to 2/0 AWG wire and accept a variety of electrical devices up to 60A, circuit breakers to 100A.

- With outlets and other devices placed where you need them, Plugmold adds efficiency and convenience wherever it is used.
- Made of steel, Plugmold protects wiring and keeps it accessible.
- A complete line of fittings makes it easy to apply Plugmold to almost any wiring situation.
- All Plugmold multioutlet assemblies and fittings are listed by Underwriters' Laboratories, Inc., and Canadian Standards Association.
- For engineering assistance, contact your nearest Wiremold representative — listed in the EEM yellow section.

Plugmold with prewired outlets

PLUGMOLD 2000 and 2200: Furnished completely prewired (No. 12 Type TW). Grounding outlets (15A, 125V) are spaced at regular intervals.

Outlet Spacing: 6, 9, 12, 18, 30, 60″ on centers.

Lengths: 1, 3, 5, 6′, and in Snapicoil® prewired harness up to 500′.

Circuit arrangements . . .

G Series: 2-wire, 1-circuit; Plugmold base serves as grounding conductor.

GA Series: 3-wire, 2-circuit; outlets wired alternately; Plugmold base serves as grounding conductor.

GB Series: 2-wire, 1-circuit; has insulated grounding conductor. (On special order, GB series available with insulated, isolated grounding conductor.)

2000

2200

Other Plugmold systems

Four types are furnished unwired. Outlets and othe devices may be spaced as desired.

PLUGMOLD 2100: For use with various receptacles mad by Wiremold (15A, 125V; 15A, 250V; 15A, 277V; and 20A 125V). Devices include 2- and 3-wire receptacles, Lumilin single receptacle, single-pole switch, and keyless socket Accepts wiring from 14 to 6 AWG. Devices can also b installed in 1-, 2-, and 3-gang Wiremold boxes as desired

PLUGMOLD G-3000: For use with most outlets (up to 50A and devices designed for a 1-gang box. Accepts wiring from 14 to 2 AWG.

PLUGMOLD G-4000: Used with or without channel divide strip. With divider, one compartment holds power wiring (devices to 20A), the other carries low potential (communications, etc.) circuits. Without divider, the full channel accepts devices to 50A. Max. depth of devices, 1 5/8″. Accepts wiring from 14 to 2 AWG.

PLUGMOLD G-6000: For use with most outlets (up to 60A) and devices designed for a 1- or 2-gang box. Holds circuit breakers (to 100A). Accepts wiring from 14 to 2/0 AWG.

WIREMOLD®

PLUGMOLD® MULTIOUTLET SYSTEMS FOR ELECTRONIC APPLICATIONS

Typical uses of Plugmold

Original equipment: Plugmold adds value, convenience and efficiency to control consoles, cabinets, racks, benches, chassis, modular equipment, data processing equipment, trailers, shelters, etc.

In laboratory and production areas: Use Plugmold on benches, over benches, on walls and partitions — wherever you need to put electricity to work.

Strips of Plugmold in cabinets feed radio/TV transmitting equipment. *WTIC Broadcast House, Hartford, Conn.*

Rotary accelerator has Plugmold on leg to handle a variety of services. *G.E. Space Center, Valley Forge, Pennsylvania.*

Central time transmitter in computer uses Plugmold to feed power to fan, clocks, etc. *Friden, Inc., Rochester, N.Y.*

Plugmold brings power wiring and antennae leads to closed-circuit TV monitors. *J. F. Kennedy Space Center.*

20CSK Cord Set Kit

The Cord Set Kit converts runs of Plugmold 2000 into portable power units that can be easily moved with work benches, then plugged in again at a new location. Ideal for laboratory and production situations where changing needs require frequent repositioning of benches.

LUMPED CONSTANT DELAY LINES

CUSTOM-BUILT

Allen Avionics, Inc. manufactures a wide variety of delay lines to customers' specifications. The following specifications encompass areas in which we normally work. If, however, your requirements fall outside of the following parameters, we would still be interested in hearing from you.

RANGE — Delay times from 3 nanoseconds through audio ranges are available.

TIME DELAY/RISE TIME RATIO — Time delay to rise time ratio to 300/1.

CONSTRUCTION — Units are hermetically sealed in metal cans with glass to metal termir s. Epoxy encapsulated units are also available.

SIZE — Sizes are available from ⅝ x ⅝ x .450 inches.

TOLERANCE — Normal tolerance on time delay is 5%. In most cases tolerances of ½ can be held.

TEMPERATURE — Most of our lines are manufactured to 50 parts/million/degree C from mi s 55 degree C to 105 degree C.

SALT SPRAY & HUMIDITY — No problem is encountered here due to the complete seal and e utilization of special paints.

SHOCK & VIBRATION — Units are foamed in hermetically sealed cans which enables them meet military specifications.

DELIVERY — Prototypes of special lines can often be delivered in a week or two.

Our engineering staff is always available to help with any delay line and application proble

STOCKED DELAY LINES FROM 20 NANOSECONDS TO 1000 MICROSECONDS

TYPE	TIME DELAY	IMPED-ANCE	TIME DELAY TO RISE TIME RATIO	SIZE

	100, 300, 800, 1000 μs.	1000 Ω		

* Since the Quick Line is a tapped module consisting of 10 sections, the tap increment of any module can b determined by dividing the module time delay by 10. Modules of the same impedance can be put togethe in groups of 1, 2, 3 and 4 to achieve different time delay and rise time combinations.

STANDARD MINIATURE DELAY LINES

L Dim. Inches	A Dim. ±.005
1.5	1.140
2.0	1.640
2.5	2.140
3.0	2.640
3.5	3.140
4.0	3.640

All delay lines are 100% tested for delay time, rise time, attenuation, and impedance before and after potting, and again before shipment.

Construction: Hermetically sealed in metal case and potted in epoxy resin.
Mounting: 4/40 studs.
Terminals: 4 glass headers.
Finish: Military Gray.
D.C. working voltage: 300.
D.C test voltage: 600.
Temperature: from −55 to 105°C .005%/°C.
Impedance tolerance: ±10%

T LINE EQUALIZER

TYPE AV-535

THE ALLEN AVIONIC'S AV-535 EQUALIZER IS DESIGNED TO COMPENSATE FOR LOSSES IN RG-11/U (75 OHM) CABLE AND ITS EQUIVALENTS. THE UNIT IS CAPABLE OF EQUALIZING 50 TO 300 FEET IN 50 FOOT INCREMENTS.

Terminals on mounting surface are so arranged to provide for simplified strapping for compensation of different cable lengths. All units are foamed and hermetically sealed in steel cans.

IMPEDANCE: 75 ohms ±2 ohms to 8 megs.

ATTENUATION OF CABLE PLUS EQUALIZER: 3 db.

Attenuation of equalizer alone is as shown in the following table:

Feet	0.1 mc	2 mc	4 mc	8 mc
50	2.97 db	2.86 db	2.79 db	2.67 db
100	2.93	2.68	2.53	2.27
150	2.90	2.51	2.28	1.88
200	2.86	2.35	2.03	1.52
250	2.82	2.19	1.82	1.21
300	2.78	2.02	1.58	0.86

TOLERANCE: ±.07 db.

SIZE: 2 x 3½ x 5 inches (not including mounting stud length).

MOUNTING CENTERS: 1½ x 3 inches.

STUD SIZE: 8/32 x 1/2 inch long.

ULSE & VIDEO DELAY LINE

TYPE AV-397

These delay lines are designed to be used with any 75 ohm system for either pulse or video delay. Although intended primarily for equalizing the delays in various lengths of coaxial cable, the line can be used wherever any delay from .025 μs. to 2.075 μs. is needed. The delay is changed by adding individual lines of various delays to give the desired total delay.

Each type AV-397 delay line consists of seven individual delay lines each having its own input and output terminals. Each of these seven lines may be used individually or collectively. By connecting the output of one to the input of another, 83 different time delays are available in .025 μs. steps from .025 μs. to 2.075 μs. The delay of each individual line is marked between its input and output terminals. The total time delay is the sum of the delays of the individual lines that are connected.

Distortion with a normal TV type pulse is well under 2% and not normally visable. Using the full delay of 2.075 μs., the response to video is down by 3 db at 5 megacycles.

MAXIMUM DELAY: 2.075 microseconds ±3% variable in .025 microsecond steps from .025 microseconds to 2.075 microseconds.

TIME DELAY OF INDIVIDUAL LINES: 1, .5, .2, .2, .1, .05, .025 microseconds.

RISE TIME FOR ENTIRE LINE: .06 microseconds maximum.

FREQUENCY RESPONSE: 3 db down at 5 megacycles for 2.075 microseconds delay.

DISTORTION: 2% maximum with .2 microsecond input pulse.

IMPEDANCE: 75 ohms ±5%.

DC WORKING VOLTS: 300.

TEMPERATURE COEFFICIENT: 50 parts/million/C° from −55°C to 105°C.

ATTENUATION: 7% maximum for 2.075 microsecond delay.

MECHANICAL: Hermetically sealed in a steel can 2" x 2½" x 5½", painted gray with black identification markings, and using 10/32 x ½ inch studs spaced on 1½" x 2" centers for mounting.

VARIABLE DELAY LINE — MODEL 75-2

Model 75-2 consists of seven delay lines each having its own switch. The time delay is changed by switching one or more individual lines in series. The delayed output is always the summation of individual delay lines and not the result of a tapped line. This feature is an important factor in eliminating undesirable reflections in the output pulse. The passive networks are capable of any of 83 different time delays ranging from .025 microseconds to 2.075 microseconds in .025 microsecond increments. The delay line finds general use in the laboratory in such applications as delaying the sync on sampling scopes so that the output of delay lines may be observed. Two RG11/U connectors serve as the input and output.

Time Delay: From .025 to 2.075 μs. in .025 μs. increments.
Delay Tolerance @ Maximum Setting: 3%.
Time Delay of Individual Lines: .025, .05, .1, .2, .2, .5, 1 μs.
Rise Time: .06 μs. max. @ max. delay.
Impedance: 75 ohms.
Attenuation: 7% maximum.
Distortion: 2% max. with .2 μs. input pulse.
D.C.W.V.: 300
Size: 7" x 8" x 8"

ALLEN AVIONICS, INC.

LUMPED CONSTANT DELAY LINES

HIGHEST $\frac{\text{TIME DELAY}}{\text{RISE TIME}}$ RATIO EVER BUILT!

These Delay Lines have the highest ratio of time delay to rise time that has ever been built in a Lumped Constant Line. Unlike other types of high ratio lines, the Lumped Constant Delay Line has a passband from D.C. to its cutoff frequency and maintains a constant delay over these frequencies. These lines are also unique in that they offer relatively low insertion loss.

This group of lines is characterized by ti time delay tolerances, low pulse distortion, cellent phase linearity and good temperat stability.

For laboratory use, any time delays from microseconds to 100 microseconds can be bu into variable decade instruments with ratios over 100/1. These units could have a reso tion of up to 1/5000 of the total delay.

Series "HF" HIGH FREQUENCY

The HF Series in most cases will serve as more than adequate electrical replacement for coaxial cable. The inconvenience of handling and storing cable will thus be eliminated. Standard impedances of 50 and 75 ohms are available. Units are normally supplied with BNC connectors. Tapped lines and time delays other than those shown below can be supplied.

LUMPED CONSTANT DECADE DELAY LINES

TYPE "D"

Type "D" Variable Decade Delay Units are engineered to provide variable time delays with absolute stability for accurate triggering and excellent reproduction of the input pulse. These lumped constant delay lines are completely passive. All models have a minimum of 1000 to 1 resolution and consist of three or more decade switches. Any delay output of Type "D" decade delay unit is the summation of individual lines. It is not the result of a tapped line. This feature is an important factor in eliminating undesirable reflections in the output pulse. Accuracy at any delay exceeding 1% of the unit's total delay is within 3%. These units have a characteristic impedance of 500 ohms in and out. While the units listed are standard, other delays and impedances can be manufactured to specifications.

DELAY LINE SYNTHESIZERS

Primary use is to experimentally determine the exact requirements of a delay line in order to avoid over-specifying. A safety factor of 50%, caused by not knowing the exact required rise time, results in approximately 280% increase in cost, size and weight. In addition, the added components reduce the reliability to ⅓ of the original.

The delay output of the Synthesizer is the summation of individual lines. It is not the result of a tapped line. This feature is an important factor in eliminating undesirable reflections in the output pulse.

The rise time control filter (Fig. 1) is especially designed to give a flat response to a pulse input with the only effect being a change in rise time. The filter may be used alone in any other application where is it desired to slow the rise time of a pulse by a known amount while still maintaining symmetrical wave form without ringing.

When a line with almost no ripple or distortion is required, the rise time control may be used with only a slight decrease in rise time to obtain the pulse pictured in Fig. 2.

FIG. 1
Output of rise time control

FIG. 2
Effect of rise time control on distortion

Model 73-11

The Model 73-11 Synthesizer can be used in any breadboard circuit where a time delay of up to 11 microseconds is required. The 50 ohm input allows for direct impedance match to the output of most pulse generators.

The basic delay line finds general use in the lab in such applications as delaying the sync on sampling scopes so that the output of delay lines may be observed, or in any application where the internal delay of the scope is not sufficient.

The filter may be used alone to control the rise time of pulse generators which are too fast for the application at hand.

Model 500-63

The Model 500-63 Synthesizer can be used in any breadboard circuit where a time delay up to 63.5 microseconds is required. The 500 ohm input allows for direct impedance match to transistor circuits.

Time Delay:	From .025 microseconds to 11.075 microseconds in .025 microsecond increments.	From .5 microseconds to 63.5 microseconds in .5 microsecond increments.
Rise Time of Delay Lines:	@ maximum delay: .22 μs. See graph.	@ maximum delay: .8 μs. See graph.
Impedance:	50 or 73 ohm input or output — switch controlled.	500 ohms
Rise Time Control:	Rise time 0.01 microseconds to 1.1 microseconds in .01 microsecond increments.	Rise time .1 microseconds to 11 microseconds in .1 microsecond increments.
Rise Time Control Tolerance:	5%	10%

Rise time at different delays for basic delay line.

Independent control of time delay and rise time is available to experimentally determine required time delay and rise time for minimum size, weight, cost and for maximum reliability.

TO ORDER STANDARD UNIT SPECIFY SPIRADEL, TIME DELAY & IMPEDANCE

FOR IMMEDIATE DELIVERY!

SPIRADEL is a small diameter, distributed constant fixed delay line, featuring higher delay to rise time ratio and excellent pulse fidelity. Its new shape offers greater package design versatility than most other delay lines available, and the entire unit is encapsulated for maximum environmental protection.

The SPIRADEL line covers a delay range of 20 to 6000 nanoseconds. Any delay within this range may be selected. Time delay to rise time ratios range up to 30 to 1. Any impedance from 150 to 600 ohms is available. Standard delay tolerance is 5%, although tighter tolerances can be held.

SPIRADEL units are designed for operation from −55°C up to +105°C. Bandwidth is from DC to the frequency f = .35/rise time.

Actual oscilloscope presentation photo of input and output pulses of 100 ns. Spiradel, illustrating excellent pulse fidelity.

NEW! "TAPPED" SPIRADEL®

THE MOST COMPACT DISTRIBUTED DELAY LINE

FEATURING EXCELLENT PULSE FIDELITY AT ALL 10 DELAYS

HIGHEST TIME DELAY TO RISE TIME RATIOS FOR COMPARATIVE SIZE AT LOWEST COST!

EXCEPTIONALLY FINE PHASE LINEARITY OVER WIDE FREQUENCY RANGE

"Tapped" Spiradels are available in 150 and 325 ohm Lines in range of delays from 20 to 1000 nanoseconds. While delays in table are standard, any delay within this range can be built. Total delay tolerance is ±5%. Tap delay shall be multiples of 10% of total delay ±5% or 2 nanoseconds, whichever is greater.

Spiradel units are designed for operation from −55°C up to +85°C. Bandwidth is from DC to the frequency f = .35/rise time.

TO ORDER STANDARD UNIT SPECIFY TAPPED SPIRADEL, TOTAL TIME DELAY & IMPEDANCE

SERIES "S" & "LV" SWITCH VARIABLE LUMPED CONSTANT DELAY LINES

These units are composed of 4 individual delay lines having a common ground. The switch is so arranged that (except for position one which is no time delay) it connects one or more of the delay lines in series across the input and output terminals. Therefore, the delayed output is always the summation of individual delay lines and not the result of a tapped line. This feature is an important factor in eliminating undesirable reflections in the output pulse.

All units in this series can have their time delays varied to any multiple of 1/10 of the total delay.

Units are supplied in gray steel cans, 2 x 3½ x 5 inches. Four 8/32 inserts and four terminals (1 input, 1 output and 2 grounds) are on the 2 x 3½ inch surface. The switch knob is located on the opposite surface.

Distortion with .02 μsec. input: 10% maximum.

All units have variable time delays in any multiple of 1/10 of the total delay.

	Impedance	Time Delay @ Maximum Setting (microseconds)	Maximum Attenuation	Notes
S Series	75 ohms	.3, .6, .9, 1.2	5%	Time delay to rise time ratio at maximum delay: 10 to 1 minimum. D.C.W.V.: 300.
	500 ohms	.6, .9, 1.2, 1.8, 2.4, 3, 4.5, 6.0	10%	
LV Series	250 ohms	200	50%	Time delay to rise time ratio at maximum delay: 5 to 1 minimum. D.C.W.V.: 100
	500 ohms	400, 500		
	1000 ohms	100, 300, 1000		

Delay Lines

Andersen designs and develops many more different types of delay devices (including optical and microwave) than any other concern.

Andersen is the only firm producing delay devices for the entire range of frequencies.

Andersen is the sole major manufacturer of delay devices specializing in signal processing systems.

Andersen supplies a substantially greater volume of delay equipment than any other source.

	TYPICAL APPLICATIONS	RANGE OF PARAMETER	NEWEST DEVELOPMENTS and UNIQUE CHARACTERISTICS
AUDIO	Sonar, voice equalization, ASW sensors.	1 usec to 1 sec delay, balance or unbal anced. Typical delay-bandwidth products up to 40. Impedances from 100 to 1000 ohms.	Delay-BW products up to 60 or more fixed lines, and 15 or more for electrica variable lines. Extremely low attenuati for delay-BW of 40 max, e.g. 0.001 db p usec max. For higher delay-BW 0.01 per usec max. Extremely low frequen ripple, better than 1%. Phase respon and group delay to better than 1% at 3 response.
VIDEO	Radar-sonar signal processing, comb filters, correlation, cancelling, television broadcast, delay equalization, field storage, signal sycnchronization.	Lumped constant lines with delay-BW products of 40 to 60, delays from 1 nsec to milliseconds. Quartz lines with CF to 150 Mhz and delays to 4000 msec. Electrically variable delays of 0.1-100 usec with delay-BW product of 15.	High fidelity storage of one full field of signal. Variable delay of full 360° chrominance. EVDL's with improved grou delay and response characteristic meeting video color standards.
IF-RF	Non-dispersive: MTI, clutter cancellation, coherent integration, target simulation, range markers, coded sequence processing, transversal equalizers, receiver gain control versus time, time multiplexing correlation, Variable time delay, digitally controlled. Dispersive: Pulse expansion-compression systems, spectrum analyzers, doppler estimators.	CF to 150 Mhz, BW to 50% of CF. Delay 4000 usec in single unit, longer when used in cascade. Products always offered with unity gain.	Short delays with low spurious, e.g., 1 use delay, 48 db spurious at 60 Mhz. Wid BW, e.g., 65% at 60 Mhz CF. Flat amplitu response e.g., plus or minus 0.2 db 30 BW 60 Mhz CF. VSWR across BW e.g., 1 to 1 nom 50 ohms.
MICRO-WAVE	Non-dispersive: ECM, ECCM, radar processing and checkout systems, fusing, altimeters, transponders. Dispersive: High resolution pulse compression and similar wide band signal processing.	CF UHF through X-band, delay 200 nsec to 10 usec. BW to 500 Mhz. Pulse-compression ratios to 500 to 1.	10 db insertion loss at 500 Mhz, delays t 10 usec at X-band. Dispersive lines wit 500 Mhz Bw, .5 usec dispersion. Trans ducer peak power capability to 50 watts average power 2 watts.
DISPER-SIVE	Pulse expansion — compression systems, spectrum analyzers, panoramic receivers, doppler estimators.	C.F. 1-120 MHz, Dispersive B.W. to 60 MHz, Delay Dispersion to 1000 microseconds, Compression Ratio to 2500. All units available with ovens and temperature controllers, meet Mil-specs. Complete pulse compression systems our specialty.	IMCON systems, B.W. up to 15 MHz, dispersion up to 300 micro-seconds, small size, good linearity and temperature stability. DELECON systems offer B.W. up to 60 MHz, dispersion up to 30 microseconds, good linearity and temperature stability. STRIP LINES are least expensive, B.W. up to 6 MHz, compression ratio up to 200 per strip, low insertion loss, small size.
DIGITAL	Deltics, delta modulators, spectrum analyzers, matched filters, serial memories, scratch pad, refresh, buffer storage, A-D conversion.	Wiresonic: CF to 2 Mhz, storage 20,000 bits per unit. Glass: CF to 20 Mhz, storage 4500 bits per unit. Quartz: CF to 40 Mhz, storage 30,000 bits per unit.	Dual channel, 35 Mhz memory in single small package. Low cost high capacity temperature compensated multi-line packages. Lowest cost per bit in comparison with ferrites and MOS. Highest bits per cubic inch. Lowest power dissipation per bit.
OPTICAL	Laser modulation, Switched light sources, Q switches, mode lockers, beam deflectors, optical signal processing, cross and auto correlation, radar pulse compression-expansion matched filters, spectrum and Fourier analyzers, acousto optical continuously variable and multi-tapped delay lines.	CF 0.1 Mhz to 12 Ghz. BW octave or greater. Modulation to 4 Ghz. Time-BW products to 20,000 Mhz-useconds. Spectral ranges from UV to IR.	High efficiency, high power broad band transducers, IR modulation Stable, high rep rate Q switches, liquid cooling for high power, compact solid state designs.

PRECISION, RUGGEDNESS, RELIABILITY

These four series of military grade delay lines are encapsulated in an epoxy casting resin, which is poured under vacuum and cured to a solid, void-free block of high-temperature plastic. All components and wires are solidly supported against shock and vibration and completely protected from moisture and salt spray. All four series meet the requirements of MIL-STD-202B..

The remarkable performance and stability of these very compact delay lines is due to the extraordinary care taken in the design and manufacturing processes. Phase characteristics are individually adjusted for optimum pulse performance, to give fast-rising, noise-free output pulses with minimum overshoot and distortion. A complete system of inspections and tests at every stage of construction and assembly assures the utmost in quality and reliability.

OTHER TYPES AND CUSTOM DESIGNS ALSO AVAILABLE

SERIES L — 10 Taps

Rise Time: 7% to 8% of Total Delay

Size: ½" x 1.5" x 2.9"
Mounting: Two 6-32 tapped inserts

SERIES N — 20 Taps

Rise Time: 3% to 4% of Total Delay

Size: ½" x 2" x 6.4" Mounting: Four 6-32 Tapped Inserts

SERIES L AND SERIES N

Delay Tolerance: 2%
Delay Temp. Coeff.: 0.003%/°C to 0.01%/°C
Test Voltage: 800 vDC
Working Voltage: 400 vDC max
Pulse Voltage: 400 v peak max
Temperature Range: −65°C to 125°C
Connections: 22 gauge pins, ⅜" long

Designed to plug into printed wiring boards for dip-soldering into place, these high-performance units are readily adaptable to other types of circuit construction, since the 22 gauge pins may be easily formed to fit lugs or terminal posts. The pins are laid out on the standard 0.1" printed circuit grid.

Careful control of the attenuation characteristic and the provision of special phase-compensating circuits result in superlative pulse performance. The tables give the cut-off frequencies of the delay lines which are available in each series. Part Numbers: Give series, impedance, and delay; e.g., N-1000-40.

DUAL-IN-LINE VARIABLE DELAY LINES

DV Series

BEL introduces the first variable delay line compatible with IC Dual-In-Line packaging featuring: • Hermetic Seal-O-Ring construction • Precious metal contacts • Resolution — MIN 2% (for high reliability performance)

Lead Dia. = .020

NV Series

VARIABLES

These precision hermetically sealed variables are available in a wide range of delays and impedances. Both may be provided with various mounting and terminal configurations to suit most applications.

CV Series
LV Series

VARIABLES

These precision hermetically sealed variables are available in a wide range of delays and impedances. Both may be provided with various mounting and terminal configurations to suit most applications.

DUAL-IN-LINE DELAY LINES

- Delays from 1-1000 nanoseconds.
- Band Width to 60 mhz.
- Impedance 50 to 1000 ohms.
- Resistive Terminations if desired.
- Tapped Delay Lines available.
- Several separate lines in one case.
- Contact Bel Engineering for special applications.

BLILEY GLASS DELAY LINES FOR DIGITAL STORAGE

Digital glass memories have recently found wide application as an ultrasonic storage device in computers and associated digital processing equipment. Bliley ultrasonic digital delay lines meet this requirement with bit rates as high as 30M bits/sec and access times as low as one microsecond. Although digital lines operate at one-half the period of the center frequency, the recommended bit rate is approximately two-thirds of the center frequency.

Digital lines operate in the RZ or return to zero mode which is the least demanding on external circuitry. Additional circuitry is required for NRZ operation to obtain increased storage capacity or BIPOLAR operation for increased signal to noise ratio. Most digital lines utilize low temperature coefficient glass as the delay medium to obtain good delay time stability with temperature change as indicated in Figure 1.

Attenuation depends upon delay time, operating frequency, required signal to noise ratio, terminating impedance, input and output admittance conditions and pulse shape. The most efficient operation of a digital line is achieved at its point of minimum attenuation (center frequency) although it may operate satisfactorily at any point throughout its 3 db bank pass. To reduce loss level, ceramic transducers are used up to 20 MHz and quartz transducers from 20 MHz to 30 MHz.

Typical digital response characteristics are shown in Table I, and Table II indicates the present design range parameters for glass lines.

FIG. 1

TABLE I. TYPICAL DIGITAL CHARACTERISTICS

Delay Time (μsec)	Pulse Width (nsec)	Atten. (max.) (db)	S/N (min.) (db)	Term. Imp. (ohms)	Max. Delay Change Temp. 10-80°C (nsec)
1.700	85	22	25	50	3.0
10.000	12	30	20	50	2.0
26.500	80	26	20	100	2.0
26.500	30	26	20	100	2.0
52.800	30	35	20	50	4.0
50.000	25	32	20	50	4.0
63.500	18	70	25	50	5.0
63.500	75	32	20	50	5.0
63.400	50	38	25	100	5.0
98.700	84	26	20	100	8.0
140.400	84	26	20	100	10.0
200.000	75	36	20	50	17.0
250.000	25	50	20	50	21.0

TABLE II. DIGITAL DESIGN RANGE

Center Frequency	3.0 MHz	to	30.0 MHz
Input Pulse Width	167 nsec.	to	16.7 nsec.
Delay Time	1.0 μsec.	to	300 μsec.
Signal to Noise Ratio	15 db	to	25 db
Termination Impedance	1500 ohms	to	15 ohms
Attenuation: Ceramic Transducers	20 db	to	40 db
Quartz Transducers	30 db	to	80 db
Delay Time Tolerance at 25°C	±0.2% (1-20 μsec.)	to	±5 nsec. (10-300 μsec.)
Delay Time Stability 0 to +80°C	(0.2% @ 1 μsec. 0.01% @ 10 μsec.)	to	0.01% (10-300 μsec.)

Bliley is equipped to manufacture a broad range of custom-designed delay lines. Our experienced staff will welcome an opportunity to analyze your specifications and prepare quotations for your requirement. Literature will be sent promptly upon request.

BLILEY ULTRASONIC DELAY LINES FOR RF APPLICATIONS

Ultrasonic delay lines are widely used in conventional RF systems such as video pulse integrators and moving target indicators in radar applications. This type of ultrasonic delay line is available over the range from 1 microsecond to 4500 microseconds.

In general, low TC glass is used for the short delay time range, with frequency temperature characteristics as shown in Figure 1. Long lines, which use fused quartz as the delay medium, have a temperature coefficient of minus 75 ppm per degree C.

Long delay lines may be specified with carrier frequencies in the range from 10 MHz to 40 MHz. Spurious signal attenuation shown in Table III applies only to frequency range 25-40 MHz. Best attenuation of spurious signals is achieved in medium delay time ranges and at higher carrier frequencies. Dependent upon loss level requirements, bandwidth may be estimated from 50% to 65% of carrier frequency. Loss and bandwidth characteristics are interdependent and are controlled by choice of terminations, carrier frequency and transducer capacity as shown in Table IV.

TABLE III. LONG DELAY LINES

Delay Time Range (μsec)	30-400	200-700	300-1400	500-1600	600-2000	1400-2700	600-3300	1300-4500
Spurious db Down	50	55	60	55	55	50	45	45
3rd Time Signal db Down	40	45	55	—	—	—	—	—

TABLE IV. SHORT DELAY LINES

Group	Freq. Range (MHz)	Delay Time Range (Microseconds)		Max. Temp. Coeff. (ppm/°C)	Bandwidth as percent of carrier (with 93 ohm termination)	Loss level (db) with different termination		
		Ringing Single Ended	Absorber Double Ended			50 ohm	93 ohm	1000 ohm
A	5-60 60-100	.75-60 .75-60	.75-30 .75-30	—100 —100	30 15		45 50	28 33

DELAY LINE COMPUTER MEMORIES DELCOMS

THE DELAY LINE COMPUTER MEMORY (DELCOM) offers the **Lowest Price Per Bit** of any high speed memory device. Computer Devices Corp. offers convenient standard packages for all practical storage capacities from 10 bits to 20,000 bits in single delay line units as well as multi delay line units* with massive storage capacities. All Delcoms are compatible with DTL and T²L logic. Normal power requirements are +12 and −12 VDC and +5 VDC. However, Delcoms are tailored to your bit rate, delay, input-output logic and power requirements.

MODEL SERIES	MAXIMUM STORAGE (BITS)	MAXIMUM (Hz) BIT RATE	SIZE INCHES
MS 2219	1,300	2.6	3.25 x 4 x 1
MS 777	1,500	2.3	3.50 x 6.37 x .5
MS 772	4,000	2.2	4.50 x 6.25 x 1.12
MS 773	8,000	2.0	8 x 10.50 x .62

*MA 2255	24,000	2.0	8 x 5 x 2.75
*MA 2256	250,000	2.0	19 x 14 x 17

*Examples of multi delay line units.

ODRESSABLE RANDOM ACCESS MEMORY

4000 Series

Random Access
Binary coded address
Average access time 512 μsec
Integrated circuits throughout
Storage modularly expandable without limit
Immune to primary power failure
Visual display available

TORAGE

ne basic unit stores either 1024—12 bit words ex-andable in 2 bit steps per module or 2048 — 6 bit ords expandable in 1 bit steps per module.

ther models with capacity of up to 16,384 words of ny length.

KEYED OSCILLATOR

For Precision Gating
Frequencies from 0.5 to 25 MHz

The 0G5000 is a square wave oscillator which can be precisely gated by means of a control voltage. The leading edge of the 1st output pulse occurs within 3 nanoseconds of the gating or keying signal. It will respond to a gate width equal to one output frequency cycle or greater. Size: 2.0x1.7x.62".

CONTROL SIGNAL is ground to −4V or −5V DC with rise time of less than 10% of output period length.

OUTPUT SIGNAL is ground to +4V DC from DTL or T²L logic gates. Duty cycle: 50% ±10%. Period accuracy: Better than ±1%.

DIGITAL DELAY LINES FOR DIGITAL AND CW APPLICATIONS

MAGNETOSTRICTIVE DELAY LINES are extremely stable with temperature, with stabilities of up to .5 PPM/°C achievable. Although primarily used in digital applications at bit rates of up to 1 MHz RZ or 2 MHz NRz, they also delay CW signals with center frequencies from 200 KHz to 1 MHz with a bandwidth of 20%. Insertion loss is about 60 db.

MODEL	DELAY (μsec)	SIZE (INCHES)
ML 545	up to 23 μsec	1 x 5 x .375
MT 767	1,000	3.5 x 4.0 x .46
MT 762	2,000	4.0 x 5.0 x .50
MT 763	4,000	6.0 x 7.0 x .50
MT 764	8,000	9.5 x 10.5 x .75
MT 765	16,000	10.5 x 11.5 x .56

MULTIPLE OUTPUT DELAY LINES

Multi-tap Delay Lines are supplied with as many tap points as desired and are useful as word generators and correlators.

MODEL	TOTAL DELAY μsec	NO. OF TAPS	TAP SPACING μsec	SIZE
ML718	15	12	1.25	1.75 x 8 x .50
ML790	16	16	1.0	1.75 x 8 x .50
ML791	20.3	14	1.45	1.75 x 8 x .50
ML883	28	24	1.0	3 x 9.37 x .50

VARIABLE DELAY LINES

THIN LINE VARIABLE Nanosecond Range

Compatible with Dual-In-Line packaging with .25" overall thickness. Sealed in plastic case. Lumped Constant parameters. Temperature coefficient less than 50 PPM/°C. .020" P.C. mounting pins.

MINIATURE DISTRIBUTED VARIABLE Nanosecond Range

Hermetically sealed in a metal case. Distributed parameter with temperature coefficient of less than 150 PPM/°C. .030" P.C. mounting pins.

MINIATURE LUMPED VARIABLE Nanosecond Range

Hermetically sealed in a metal case. Lumped constant parameter. Temperature coefficient less than 50 PPM/°C. .030" P.C. mounting pins.

MICROSECOND RANGE VARIABLE

Hermetically sealed in a metal case. Lumped or distributed constant parameters for longer delays and special applications.

NOVEL INFINITE RESOLUTION

with input and output impedance of equal value. Voltage standing wave ratio less than ½ db to 45 MHz.

ONE TURN VARIABLE

Lumped parameter multi position switch provides resolution of 100:1.

INFINITE RESOLUTION VARIABLE

provides absolutely stepless delay change to high frequency signals. Ideal phase shifter.

MAGNETOSTRICTIVE DIGITAL VARIABLE

For delay of radar pulses or digital data. These units utilize the magnetostrictive delay line and are supplied with electronics to faithfully reconstruct the delayed input data.

LOW FREQUENCY ANALOG VARIABLE DELAYS

Decade switched. Lumped parameter. Temperature stability less than 40 PPM/°C, VSWR less than ±½ db; phase linearity ±¼%.

ANALOG DELAYS WITH DIGITAL TECHNIQUES

can provide delays in excess of 1 second to analog signals as high as 1 MHz.

FIXED AND TAPPED DELAY LINES

THINLINE—NANOSECOND SUB-MINIATURE LINES

.21 inch thickness and pin arrangement makes these lines compatible with dual-in-line packaging. Encapsulated in plastic.

MODEL	IMPEDANCE OHMS	DELAY	RISE TIME OR FREQ. RESP.	SIZE INCHES
D1521-1	Available in 50, 93 and 100 ohms	50 Nsec	20 Nsec	.21 x .39 x .7
D1521-4		25	10	
D1521-7		10	4	
D152-10		5	2	
D1551-1	200	100 Nsec	10 Nsec	.21 x 1.0 x 1.5
D1551-2		150	15	
D1551-3		200	20	
D1551-4		250	25	
D1551-5		300	30	

TAPPED DELAYS

Each line provides 10 tap delays spaced at equal intervals.

	D1511-1	100	10 Nsec	3 Nsec	.21 x .39 x .7
	D1511-2		20	6	
	D1511-4		40	13	
	D1511-6		60	20	
	D1511-8		80	26	
	D1511-10		100	33	
MANY TAPS PER LINE 50 taps	D1543	100	150 Nsec	13 Nsec	.25 x .8 x 5.2
50 taps	D1544	100	300	20	.25 x 1.0 x 5.3
30 taps	D1545	100	90	8	.25 x .8 x 3.2

MINIATURE LUMPED CONSTANT

Hermetically sealed in a metal container. Delay tolerance ±5%.

Temperature stability less than 50 PPM/°C. P.C. Mounting.

D647- — — 0	Available in 93, 330, 500 and 1000 ohms	.05 μsec
D647- — — 1		.10
D647- — — 2		.25
D647- — — 3		.50
D647- — — 4		.75
D647- — — 5		1.00
D647- — — 6		1.45
D647- — — 7		2.90
D647- — — 8		4.35

Available with 3 delay to rise time ratios in 3 case sizes
4:1 .30 x 1.0 x 1.25
8:1 .30 x 1.0 x 2.45
12:1 .30 x 1.0 x 3.45

INEXPENSIVE DISTRIBUTED CONSTANT DELAYS

Plastic encapsulated units with a temperature coefficient of 150 PPM/°C. P.C. Mounting. Many other models available including the nanosecond range.

DD679- — — 1	Available in 330, 500 and 1000 ohms	.1 μsec
DD679- — — 2		.2
DD679- — — 3		.3
DD679- — — 4		.4
DD679- — — 5		.5
DD679- — — 6		.6
DD679- — — 7		.7
DD679- — — 8		.8
DD679- — — 9		.9
DD679- — — 10		1.00

Available with delay to rise time ratios of: In 2 case sizes
5:1 .37 x .5 x 4.5
10:1 .37 x 1.0 x 4.5

ATC TRANSPONDER AND BEACON CODING DELAY LINES

Standard 1.45 μsec tap spacings plus other special delay points are provided. Hermetically sealed steel cased, plastic encapsulated and PC mounted units are offered.

D1560	400	10.15 μsec	.33 μsec	.55 x 2.25 x 3.62
D1365	180	20.3	.5	.87 x 3.5 x 3.5
D1000	330	20.3	.5	.35 x 2 x 4
D120	180	25.0	.55	.75 x 5 x 4.37
D298A	500	25.3	.6	1.62 x 2.87 x 4.25
D637	180	20.3	.3	2.37 x 2.75 x 3.18

DA607	500	20,000	3.5	19 x 7 x 15
DA177	1000	100,000	.2	19 x 21 x 12

ANALOG DELAYS WITH DIGITAL TECHNIQUES can provide delays in excess of 1 second to analog signals as high as 1 MHz.

MDA2300-1	50	25,000 μsec	30 KHz	19 x 3.5 x 17
MDA2300-2	50	50,000	30	19 x 5.25 x 17
MDA2300-3	50	100,000	30	19 x 21 x 17

MANY OTHER MODELS AND SPECIALTY Delay Lines are available. If exactly what you want is not listed, please call.

COMPUTER DEVICES CORP.
63 AUSTIN BOULEVARD COMMACK, N. Y. 11725
516-543-4220

Columbia Components Corporation Delay Lines

Q-Lines (Lumped Constant)
State-of-the-art design and packaging technology enables CCC to offer delay to rise time ratios of up to 100:1, with the smallest envelope sizes possible. Coupled with extremely low attenuation, distortion and operating temperature ranges of −55°C to +125°C make CCC Q-Lines ideal for a wide range of applications.
Write for data sheet DL-6-368

Minilines (Distributed Constant)
Economically priced delay lines featuring low profile envelopes which are ideal for printed circuit mounting and applications requiring high package density. Delays up to 2 μsec, impedances for 100 to 1,000 ohms and rise times as low as 2.5 nanoseconds are available and meet all applicable portions of MIL-D-23859A.
Write for data sheet DL-4/5-368

Dual-In-Line (Mates with standard) DIP Socket)
Series DU nanosecond delay lines offer the ultimate in hi-density packaging commensurate with fast rise time. Designed for frequencies up to 125 MHz., at impedances of 100 and 200 ohms, with minimum distortion and insertion loss, this series offers uncompromising speed and accuracy in Computer, Radar and Pulse train positioning applications.
Write for data sheet DL-10-270

Transponder and Beacon Coder Delay Lines
Tap delay spacing of 1.45 microseconds with special tap delays designed for the various systems are available as off shelf and customer designed items. These lines have minimum volume and weight for airborne use and are normally supplied wired to printed circuit cards. These delay lines exhibit high delay accuracy and unsurpassed temperature stability — normally 10 ppm/°C.

Electrically Variable Delay Lines (E.V.D.L.)
Sophisticated voltage variable devices for applications such as Aperture Phase Correction in color television signal generation. Or as a Phase Modulator where the modulating voltage is used as the device bias. CCC E.V.D.L.'s are being used at frequencies up to 50 MHz by major producers of studio broadcasting equipment throughout the world.

Varilines (Mechanically Variable Delay Lines)
Columbia manufactures a wide range of precision variable delay lines encompassing delay ranges of from 0 to 20 nanoseconds, to 0 to 15 microseconds in impedance ranges of 50 to 2,000 ohms. These units can be supplied continuously variable or may be decade switched, and suitable for printed circuit applications.
Write for data sheet DL-1-368

Magnetic Core Delay Cable
Economical low-loss, high impedance delay elements for use in pulse work demanding extremely fast rise times. These delay cables can be supplied in calibrated lengths with molded-on end terminations, ready for installation or may be obtained in bulk. Delivery is usually from stock.
Write for data sheet DL-7-368

For special applications, quotations and delivery information, please call or write. Ask for complete catalog.

DELAY LINES

WITH OR WITHOUT CIRCUITRY

MAGNETOSTRICTIVE ★ LUMPED CONSTANT ★ ULTRASONIC ★ DISTRIBUTED CONSTANT ★ DISPERSIVE STRIP

MAGNETOSTRICTIVE DELAY LINES — Fixed and variable delays to 10,000 microseconds. Fixed — FMS Series; Variable — VM Series.

FIXED MAGNETOSTRICTIVE DELAY LINE — Up to 10,000 bits of data for memory storage. Circuitry compatible with all microcircuit logic. Choice of data format: RZ, NRZ or Bipolar.

ULTRASONIC DELAY LINES — Replaces most quartz or glass lines. Offers superior performance, lower attenuation and smaller size at less cost. Frequencies to 30 MHz. Delays to 200 usec and greater.

SUBMINIATURE DELAY LINES

TO-5 and micrologic packaged delay lines from 0.01 to 0.64 and longer delays. Ideal for timing transistors and other circuit components.

LUMPED CONSTANT DELAY LINES — Many shapes available including miniature types with pin connectors for PC Boards, connector fingers for plug-in units...multi-tapped units...terminal-ended units, etc. Delays from 0.05 usec to 500 usec for standard units. Delay to risetime ratios up to 100:1. Temperature stability to 50 ppm/C°.

COMPACT FIXED DELAY LINES FOR PC BOARDS — Extremely high density packaging. Typical Unit: 25:1 delay-to-rise-time ratio in a volume of 2 cubic inches.

VARIABLE DELAY LINE Resolution of 1 part in 120. Delay up to 10 usec. 1" x 3½".

UNIQUE BINARY CODED SECTIONAL DELAY LINE — Uses miniature transfer switches. Also available with terminals for remote switching.

IFF MULTI-TAP DELAY LINES Standard IFF delay lines with taps every 1.45 usec. High density packaging available for airborne transponder use.

AUDIO, HIGH FREQUENCY & DISTRIBUTED CONSTANT DELAY LINES — With unusual circuits, extreme delays, high frequency application, rapid rise times, conforming waveform circuits and corrective circuits. Write for complete details.

AUDIO DELAY CABINET — Relay rack mounted cabinet houses 25 millisecond delay with taps at every ms. Units can be cascaded for longer delays.

DISPERSIVE STRIP DELAY LINES — Delay varies with frequency. A prime application is in Pulse Compression Radar Systems, eliminating large, expensive filter components. Compression ratios of 150:1, typical.

$\Delta D \cdot \Delta f$ = COMPRESSION RATIO OR DISPERSION FACTOR

$\frac{\Delta f}{fo}$ = BANDWIDTH %

fo = MIDBAND FREQUENCY

Do = MIDBAND DELAY

SHORT FORM CATALOG

DELAY LINES

STEP VARIABLE

DESCRIPTION

L-C networks in tandem, with precise delay increments and low attenuation. Use as delay syntesizers for evaluation of Worst-Case design analysis; as time delay standards and Phase measuring devices. Meets Military specifications. Type 510 and 511 use a single 10 positions switch.

SPECIFICATIONS

ACCURACY: ± 2% of setting. ATTENUATION and *TIME DELAY see table. *RISE TIME: 2% of time delay or less. TEMPERATURE COEFFICIENT: ± 50 PPM/°C. DISTORTION: Less than 3% for pulse signals on most types. Essentially no harmonic distortion for sine wave signals. SIZE: 8 x 3.5 x 4.5 (20.32 x 8.89 x 11.43 cm) Max. for type 510 and 511. 16.75 x 5.25 x 5.5 (41.54 x 13.33 x 13.97 cm) Max. for type 1510 and 1511 (Rack-Mount Panel available on request).

*other can be provided on request.

VARTOR

DESCRIPTION
Variable inductor, reliable. Typical uses–sweep generators, analyzers, telemetry equipments, etc.

SPECIFICATIONS
INDUCTANCE RANGE: See table. INDUCTANCE VARIATION RATIO: 10:1. 0 to 100 MA. TRACKING ACCURACY: ± 4%. MATCHED UNITS: ± 1% (or better on request). CASE: Potted (printed circuit). SPECIAL UNITS: To specification, (lower bias current, greater inductance variation more linear).

LOW AND HIGH PASS FILTERS

DESCRIPTION
Designed to meet or exceed requirements of MIL-F-18327. Compact, light weight, reliable, more than meets the demands of modern equipment design. Housed in hermetically sealed case. Plug-in terminals for printed circuit boards.

SPECIFICATIONS
INSERTION LOSS: 1.5 db. ATTENUATION: ± 0.5 db. OPERATING VOLTAGE: greater than 10V. SKIRT RESPONSE: -55 db. IMPEDANCE: unbalanced. SERVICE LIFE: in excess of 10,000 hrs. TERMINALS: 0.040 dia. x ¼. MOUNTING: #4-40NC - 2B inserts (4). SIZE: 3.18 x 1.25 x .56 (8.09 x 3.17 x 1.42 cm).

ESC ELECTROMAGNETIC DELAY LINES

COMPUTER DELAY LINES

TO MIL-D-23859
USUALLY IN STOCK

ESC miniature computer delay lines feature multiple taps and adjustability of delay. They are transfer molded epoxy or in epoxy cases and are designed for PC board mounting.

Model	Time Delay (usec.)	Rise Time (usec.)	Impedance (Ohms)	D.C. Resistance (Ohms)	Dimensions (L"xW"H")

MINIATURE TRIMMER DELAY LINE

The Series 800 Trimmer delay line is designed for circuits requiring precision delay adjustments and is particularly suitable for printed board mounting. Sealed in an alkyd resin case, and with precious metal contacts, the "Trimline" will meet or exceed most equipment specifications.

USUALLY IN STOCK

- Attenuation: less than .5 db
- Resolution: less than 1 nsec.
- External termination (not supplied)
- Dielectric Strength: 300 VDC
- Operating temperature: −55°C to +125°C
- O Ring shaft seal
- High impedance tap (variable)
- Width: .75" max.
- Height: .35" max.

ESC ELECTROMAGNETIC DELAY LINES

TO MIL-D-23859 USUALLY IN STOCK

MINIATURE VARIABLE DELAY NETWORKS

The Series 700 of Miniature Variable Delay Networks has been designed and created by ESC to meet the increasing demand for variable delay lines suitable for printed board mounting.

- Operation: continuously variable shaft rotation of 4½ turns from zero to maximum delay.
- High impedance tap (variable)
- Outside dimensions: 4½" x 1½" x ½"
- Operating temperature —55°C to 125°C
- Resolution: better than 1/1000 of maximum delay
- External termination (not supplied)
- Can be operated above ground potential
- O Ring shaft seal.

MODEL NO.	TIME DELAY*	IMPEDANCE	PULSE RISE TIME**
701	.125 usec.	1500 ohms	.03 usec. (max.)
702	.25 usec.	1800 ohms	.06 usec. (max.)
703	.50 usec.	1000 ohms	.10 usec. (max.)

705	1.0 usec.	560 ohms	.20 usec. (max.)
706	1.25 usec.	470 ohms	.25 usec. (max.)
707	1.50 usec.	390 ohms	.30 usec. (max.)
708	.65 usec.	93 ohms	.10 usec. (max.)
Pulse Attenuation —1.0 db (max.) all units DC Working Volts — 500 volts (max.)			

*Minimum delay at max. position.

**Pulse rise time at termination of delay line.

Mechanical and electrical modifications available on special order.

TO MIL-D-23859 USUALLY IN STOCK

CONTINUOUSLY VARIABLE DELAY LINES

SERIES 400

- Attenuation: less than 1.0 db
- Resolution: better than .001 μsec.
- External termination not supplied)
- Can be operated above ground potential
- Operating temperature: — 55°C to + 125°C
- O Ring shaft seal.
- Operation: continuously variable shaft rotation of 10 turns from zero to maximum delay
- High impedance tap (variable)
- Outside dimensions: 6 17/32 x ⅝ x 1¼

No.	Delay (Max.)	Rise Time* (Max.)	Impedance (Ohms)
401	.10 μsec	.03 μsec	100
402	.20 μsec	.04 μsec	200
403	.70 μsec	.095 μsec	500
404	.50 μsec	.09 μsec	750
405	.40 μsec	.075 μsec	1000
406	.25 μsec	.045 μsec	1300
407	.20 μsec	.04 μsec	1500

*As measured at termination.

SERIES 500*

- Resolution: better than 1/1000 of maximum delay
- External termination (not supplied)
- Can be operated above ground potential
- O Ring shaft seal
- Operation: continuously variable shaft rotation of 10 turns from zero to maximum delay
- High impedance tap (variable)
- Outside dimensions: 7¼" x 1" x 1⅝"
- Operating temperature —55°C to +125°C

*Delay to rise time ratio of 10:1, also available upon special order.

No.	Delay (Max.)	Impedance (Ohms)	Rise Time* (Max.)	Attenuation
501	.9 μsec	1000	.2 μsec	.5 db
502	2.0 μsec	470	.40 μsec	1.2 db
503	4.0 μsec	220	.80 μsec	2.5 db
504	9.0 μsec	100	1.8 μsec	5.0 db
505	15.0 μsec	56	3.0 μsec	9.0 db

*As measured at termination

CUSTOM DESIGNS: In addition to the above listed models, ESC can supply you with custom-designed Continuously Variable Delay Lines for your special applications.

GEOPHYSICAL APPLICATIONS

Part Number 81-27 Total time delay of 28 msec. tapped at 1.0 msec. intervals. Amplitude response flat within ±.25 db from 15 cps to 250 cps. Phase response linear with ±.075% over the same frequency range. Impedance is 5000Ω and attenuation less than 6.0 db. Size 6" x 10" x 14".

Part Number 81-43 Total time delay of 50 msec. impedance is 5000. Atten. vs. frequency: —3 db at 800 cps; within ±1 db from 100 to 600 cps. Insertion loss is 8 db.

SONAR APPLICATIONS

Part Number 81-41 Total time delay of 2.9 msec. tapped at 100 μsec intervals. Tap tolerance of 20 μsecs over temperature range of 0° to 65°C and dynamic range of 0.10 to 10 volts with $\cos^2$ input pulse. Impedance is 1000Ω and attenuation less than 6.0 db. Hermetically sealed metal case, 3.5" x 4.5" x 11.5".

HOW KAPPA GETS CONSTANT DELAY IN STEEP RESPONSE FILTERS!

AMPLITUDE RESPONSE IN PASSBAND

PASSBAND GROUP DELAY DISTORTION

Difficult? . . . of course! . . . but

WE PROGRAMMED A GENERAL SOLUTION

in double precision **FOR** a high-speed digital computer, to enable us to meet the demands of systems requiring delay distortionless transmission.

ANY PREDETERMINED ENVELOPE DELAY

can now be attained

BY ITERATION OF THE POLES AND ZEROES

of a complete system with up to 50 equalizer sections. By **ACHIEVING EQUAL RIPPLE RESPONSE** this method outperforms any other equalization technique in minimizing delay distortion. KAPPA design engineers can assist you in attaining **ECONOMICALLY** an improved accuracy of time correlation between signals in data transmission systems.

KAPPA 2211 SERIES FILTERS

(TYPE: BAND PASS)

PASS BAND RESPONSE:	
Frequency Range:	3300-6000 Hz (1 db points)
Amplitude ripple:	± 0.25 db.
Group Delay Distortion:	Less than ± 100 usec.
Insertion Loss at 4500 Hz:	Less than 2.5 db
STOP BAND RESPONSE:	Min 50 db at 3000 Hz and lower Min 50 db at 6420 Hz and higher
Impedance Range:	500-6000 ohms
Pass Band Harmonic Distortion:	Less than −65 db
Intermodulation Distortion between equal simultaneous level tones:	55 db below −10 dbm
Environmental:	MIL F-18237 B

Nytronics Delay Line Sections

Wee Bits

Unique sectional construction utilizing individual pre-designed Pulse Delay elements.

48 hour delivery, not 8 weeks.

No tooling expenses.

Wee Bit Line — Wee Bits offer a unique sectionalized delay line that reduces delivery for prototype delay lines from weeks to days and eliminates expensive tooling and design efforts. Consisting of pre-designed LC sections called Wee Bits, a discreet value of delay time is offered. The aggregate number of Wee Bits determines the total delay time and is a function of delay to rise time ratio. The Wee Line assembly is made of selected Wee Bits mounted on printed circuit boards that conform to MIL-P-13949B, stacked or single layer and permits increment of delay to be tapped without disturbing uniform pulse shape. Wee Bit size 0.401″ long by 0.625″ wide by 0.230″ height and are epoxy molded to meet environmental conditions of MIL-C-15305C. Temperature range —55°C to 125°C. 300 VDC working voltage. Delay time available per Wee Bit from 10 nanoseconds to 100 nanoseconds in 10 nanoseconds increments. Wee Bits also stocked with 200 nanoseconds delay. This unique Wee Bit sectionalized delay line concept allows reduction of approximately 40% in number of sections ordinarily required*, flexibility of design, and line tapping. Individual Wee Bits only may be purchased for assembly on customer's circuits. Wee Bits are also available in shielded cases.

*Compared to constant K

LEADING ELECTRICAL PARTICULARS

Delay Tolerance:	±5%
Risetime Tolerance:	±20%
Noise:	1 to 10%, less than 3% for most types
Ripple:	1 to 10%, less than 3% for most types
Attenuation:	0.2 db/μsec. to 1.0 db/μsec. most types 0.2 db/μsec.
Temp. Coefe.:	150 $(10)^6$ μs/μs —°C
Impedance:	500 ohms ±5%
Operating Voltage:	300 Volts D.C.

Tr MEASURED AT 10% & 90% and Td MEASURED AT 50% POINTS OF INPUT AND OUTPUT PULSES. Individual Sections furnished in ±5% Tolerance (or ±1NS, whichever is greater) and must be tested in accordance with Nytronics, Inc. DSI 394.

LEADING MECHANICAL PARTICULARS (for 15 section delay line)

Length of 15 cells	6.125″
Length of 15 cells plus P.C. mounting board	7.141″
Width of cells plus P.C. mounting board	0.750″
Height of cells plus P.C. mounting board	0.330″

Basic cell size:

Length: – 0.401″ Width: – 0.625″ Height: – 0.230″

Temperature range and operating environmental conditions are covered by MIL-C-15305.

1. Divide desired time delay by desired rise time to obtain Td/Tr ratio.
2. From chart determine corresponding number of sections required.
3. Determine the delay per section required by dividing total delay desired by no. of sections determined in step 2.
4. Select the standard section having the delay determined in step 3. For intermediate values select next lower standard element.
5. Total delay is sum of individual section delays. Trimming of total delay is accomplished by selecting appropriate value of last cell.

$$\frac{Td}{Tr\ eff.}$$

$$Tr\ eff. = \sqrt{Tr^2 out - Tr^2 in}$$

If Tr out ≧ 10x Tr in, Tr eff. = Tr out

*±.5 nsec. or 5% whichever is greater.
**Impedances of 75, 93, 120 and 150 ohms also available.

ECONOLINE DELAY LINES

The chart at the left can be used to determine the number of modules required to provide a desired delay and rise time.

1. Determine the delay to rise time ratio by dividing the desired time delay by the desired rise time.
2. Using the chart determine the number of sections required for this T_d/T_r.
3. Divide this number of sections by the total delay to determine the delay per section.

Total delay is the sum of the individual section delays. It can be trimmed to the desired value by selecting the proper value of the last module.

DELAY LINES... MEMORY SYSTEMS

...AVAILABLE AS COMPONENTS...

LOW COST COMMERCIAL delay lines offer the lowest price per bit of any high-speed fast-access memory device. Tailor made lines can be mounted on customer pc boards with input and output transducers matched to available circuits. Delays from a few microseconds to 15 milliseconds are available

HERMETICALLY SEALED lines are recommended for critical commercial and industrial applications requiring reliable operation in uncontrolled environments. Bit rates to 4 mc using NRZ techniques and 2 mc using RZ or bipolar recording are available.

FULL MIL SPEC units are qualified to aircraft (MIL-E-5400), shipboard (MIL-E-16400) and aerospace specifications offering continuous operation under severe shock and vibration over wide temperature ranges (—55°C to +125°C). Tapped lines and wide adjustment lines are available

...WITH INTERFACE ELECTRONICS...

DISCRETE COMPONENT electronics can be mounted within delay line case or using conventional printed circuit board construction. Circuits include input gating, line drivers, linear read amplifiers, NRZ or bipolar detectors and re-timing flip flops

INTEGRATED CIRCUITS permit exceptional volumetric efficiency, (more than 150 bits per cubic inch) at low cost and with complete compatibility with various IC manufacturers. Lines can be synchronized to external clock or provided with internal crystal oscillator

SPECIAL SUBSYSTEMS can be provided. Typical is 4-line 33-msec, 84,000-bit recirculating buffer for raster scan display applications. Special interface cards adjust logic levels to any NPN, PNP, or integrated circuit interface. Storage costs as low as ½¢ per bit.

...OR IN COMPLETE MEMORY AND INFORMATION PROCESSING SYSTEMS...

KEYBOARD-COMMUNICATIONS BUFFERS are available to provide paper tape to magnetic tape buffering, keyboard buffering, or buffering to teletype or telephone data links. Basic system stores 4096 characters, can be expanded to 128,000 characters. I/o rates of up to 4800 baud can be provided.

SPECIAL DELAY SYSTEMS are available such as the illustrated Audio Delay Unit which delays audio or FM data up to 100 ms with excellent linearity and less than 5% distortion. A frequency response of ±1 db, 20 Hz to 20 kHz and a dynamic range of 40 db are other features.

LIMITED MESSAGE BUFFER SYSTEMS are available for buffering small remote terminal devices. Storage is up to 4,000 characters, input/output rates are compatible with telephone or teletype lines. Options include floating battery power supplies, direct interfacing to communication lines, non-destructive readout, and selective edit.

Delay Lines AND Dynamic Analysis

UNIVERSAL AD-YU ELECTRONICS, INC.

249-259 TERHUNE AVENUE • PASSAIC, NEW JERSEY
CABLE: UAD PASSAIC • PHONE (201) 472-5622

WIDE-BAND DELAY STANDARD

Accuracy Traceable To National Bureau Of Standards

TYPE 20A SERIES

Type 20A Series Wide-Band Decade Delay Standard — Bandwidth over 1000 mc. Resolution 1 nanosecond. Characteristic Impedance 50, 75, or 93 ohms. Accuracy 1%. Type 20B1-3 Series Continuously Variable Delay Standard — Bandwidth over 8000 mc; 1% Accuracy. Readability 0.05 ps; infinitesimal resolution.

CONTINUOUS SWEEP TIME DELAY CORRELATOR

TYPE 1050

Produces true and accurate time correlation by using a continuously variable delay line. Wide frequency response. Large dynamic range. Instantaneous and continuous sweeping. Use as narrow-band filter for removing noise. Use to determine transmission time and path of transmission. Use to determine degree of coherence between two random signals. Continuously Variable Time Delay: Zero to 0.18 ms up to 180 ms. Frequency Range: 3 cps to 200 kc. Analog output available for plotting correlation curve; accuracy ±0.4% of full scale.

DECADE DELAY LINES

4-Decade Variable, Resolution 1/10000.

TYPE 801-2 SERIES

Absolute stability, no time jitter. Faithful reproduction of input signal. Especially suitable for time correlation study. Delay up to 0.2 sec.; 200 sections. Bandwidth over 200 kc. Variable in four decades. Total Delay: 50 us, 100 us, 500 us, 1000 us, 10 ms, to 200 ms. Impedance 250 ohms to 1k. Rack mount panel.

DYNAMIC ANALYSIS SYSTEM

Plots Mechanical Impedance Curve, 50 CPC To 10 KC.

TYPE 1010

140 db dynamic range. Noise level up to 1000 percent without affecting accuracy. Accuracy: Phase ¼°, amplitude ratio ½ db. Sweep rate: 6, 18, 60 minutes or 3 hours. Automatically plots phase and amplitude ratio curve. Fourier response, transfer function, transmissibility, spectral density of random or periodic signals.

STEP VARIABLE DELAY LINES

TYPE 602-3 SERIES

TYPE 611 SERIES

Type 602-3 Series—Equal input and output impedance. Rise Time: Less than 4% of total delay. 11 equal steps. Impedance: 50, 75, 93, up to 1k ohms. Type 611 Series—Total Delay Range: 8 us to 128 us. 5-step variable control. Rack mount construction.

TYPE	TOTAL DELAY	IMPED.	TYPE	TOTAL DELAY	INPUT IMPED.	OUTPUT IMPED.
602b	1.1 us	75 ohms	611a1	8 us	600 ohms	300 ohms
602g4	16.5 us	300 ohms	611a3	32 us	750 ohms	375 ohms
603	27.5 us	600 ohms	611b1	16 us	150 ohms	75 ohms
603b1	11 us	1000 ohms	611b4	12 us	600 ohms	400 ohms

DUAL-CHANNEL SYNCHRONOUS FILTER

0.5° Phase Accuracy, 40 DB Dynamic Range.

TYPE 1034

Automatically and continuously tracked with the frequency of an external synchronized signal from 2 cps to 10 kc. Phase matched within 0.5 degree over the entire range. Useful for plotting phase and amplitude characteristics between two distorted signals. Isolates noise and distortion up to ten times signal level. Transistorized with rugged construction for reliable operation.

WIDE-BAND FIXED DELAY LINES

TYPE 10T SERIES

Rise Time Less Than 2% Of Total Delay. Type 10T Series Ultra Fast Rise Time Delay Lines. Bandwidth: Over 70 mc. Maximum Signal: Up to 300v. Impedance: 50, 75, 93, 500 ohms. Coaxial connectors for input and output.

TAPPED DELAY LINES

TYPE 8T SERIES

Up to 100 taps available. Impedance: 50 ohms to 5k. Total Delay: 0.05 to 0.2 sec. Rise time less than 2% of total delay. Meets MIL specifications

ULTRA LOW NOISE PRE-AMPLIFIERS

TYPE	GAIN	OUTPUT	BANDWIDTH
A1027A	20±0.3	35 Ohms	0.1c to 1.2mc
A1027B	40±0.5	30 Ohms	3c to 400kc
A1027C	40±0.5	30 Ohms	3c to 400kc

Input Impedance Over 1000 Megohms. Completely transistorized, non-microphonic, completely shielded. Distortion: Less than 1%. Use as pre-amplifier for hydrophones, piezoelectric transducers, capacitance microphones, etc. Use as impedance converter from high impedance source or capacitive source to low impedance coaxial cable.

CONTINUOUSLY VARIABLE DELAY LINES

TYPE 505-9 SERIES

Resolution Time 8×10^{-11} sec., Bandwidth Over 60 mc.

TYPE 551-7 SERIES

Type 505-9 Series — Mechanical Rotation: 345°; Rise Time: 10% of total delay. Impedance: 50 ohms to 1k. Total Delay: 0.05 us up to 10 us. Attenuation: Less than 1 db for most types. Type 551-7 Series — 20 turns mechanical rotation. Small physical size. Suitable for radar IF phase shift. Impedance: 50 ohms to 1k. Useful up to 60 mc. Total Delay: 0.01 us to 10 us.

WIDE-BAND PRE-AMPLIFIERS

TYPE A1023

Completely Transistorized, Non-Microphonic, No Hum, Completely Shielded. Miniature in size with built-in battery or external power supply. Wideband noise less than 4 microvolts.

TYPE	A102	A102B	A102E	A102J	A102K

BANDWIDTH	1c to 150kc	1c to 200kc	1c to 5mc	1c to 1mc	4c to 500kc

VARIABLE DELAY LINES

TYPE 521 SERIES

Type 521 Series—60 steps coarse control plus continuously adjustable vernier control. Resolution Time: 8×10^{-11} second. Maximum delay over 30 microseconds. Type 605 Series—60 steps; Type 606.7 Series—120 steps. Time delay accuracy ±1% at any point. Can be used for matched low output impedance.

TYPE	521a	521b	605a	605m	606a	606j	607k	607p
TOTAL DELAY (US)	6	9	0.6	6000	1.2	1200	2400	48000
IMPEDANCE (OHMS)	500	750	75	500	75	1000	500	500

MICROWAVE COAXIAL SWITCH

Type MC-104A — double-pole double-throw; Type MC-104B—single-pole double-throw. DC to 2 kmc with VSWR less than 1.05. Life Expectancy: 15000 operations minimum. 50 ohms input and output impedance.

MICROWAVE IMPEDANCE CONVERTER

Type MC-102A, 50 ohms to 73 ohms; Type MC-102B, 50 ohms to 93 ohms. Converts 50 ohms to 73 ohms, 50 ohms to 93 ohms or vice versa. DC to 3000 mc. Low VSWR. 1 watt average, 10 watts peak.

VIDCOR CO., Inc.

1251 W. EL SEGUNDO BLVD. • GARDENA, CALIFORNIA 90247 • TEL. (213) 757-0119
(213) 757-0110

SPECIAL FEATURES

- High density package without loss of bandwidth or rise time
- "M" Series provides 75% reduction over conventional unit size
- Temperature Range: −55°C to 125°C with low temperature coefficient
- Lead spacings designed for 0.1" circuit board grids
- Designed to allow low cost production
- Dimensions — .30 x .30 maximum cross-section, 2.5" maximum length

SPECIAL DELAY LINES

Vidcor Company offers at low cost, custom designed lines to your requirements in addition to the typical size shown. Custom delay lines have been made in various external configurations consistent with customer requirements.

SPECIFY "ARNOLD" FOR YOUR PERMANENT MAGNET

ALNICO MAGNETS

Arnold permanent magnets are available in all types of Alnico material, in sizes ranging from large castings weighing over 80 pounds to very small sintered parts weighing less than one gram.

Alnico 5 can usually be depended upon to deliver the greatest energy product to the magnetic circuit per weight of magnet material. It is therefore generally the first choice for a magnetic material except where special physical considerations are paramount. Modified or premium grades are also available, such as Alnico 5-7, a crystal-oriented material used where size and weight must be reduced without loss of energy.

Special assemblies such as rotors, traveling wave tube magnets, magnetron magnets, etc. may be supplied in an aluminum jacket to facilitate mounting and supply an added protection to the magnet.

Large magnet assemblies may be supplied for focusing mass spectrometer and other measuring applications where a high degree of stability and uniformity of field is required.

Many sizes and types of Alnico magnets are carried in stock for immediate delivery.

ALNICO 8 Available from Arnold in production quantities, Alnico 8 possesses the highest coercive force of all Alnico grades, as well as a high energy product and a relatively low temperature coefficient. It is especially suited for traveling wave tube periodic focusing applications. Gap flux densities greater than 1000 gausses are attainable in tubular-type straight field focusing magnets. Alnico 8 is also recommended for applications which involve strong demagnetizing fields, or where space considerations dictate the use of a short magnet.

SPECIAL PERMANENT MAGNET MATERIALS

ARNOX 3 Arnox 3 is a molded-type magnet having high coercive force and moderately low residual induction and energy product. Principal uses are for magnetic requirements which are not stringent, and for a relatively short magnet of reasonable cross section. Accurate dimensions and close tolerances can be economically obtained. These magnets can be premagnetized before assembly, and have very high resistance to demagnetiziation. Slightly better magnetic properties are obtained in the pressing direction than in other directions.

ARNOX 5 Arnox 5 is a ceramic permanent magnet material composed of highly oriented barium ferrite. It has many times the energy product of Arnox 3 and is comparable in many applications to Alnico 5. Because of its high coercive force, its use is recommended in applications where a short magnetic length is desirable or where extremely high demagnetizing forces are encountered.

VICALLOY Vicalloy is a carbon-free permanent magnet alloy containing about 10% vanadium, 50% cobalt and the balance iron.

Vicalloy may be fabricated in the form of castings, hot rolled bars and forgings, or cold rolled strip, wire and tubing. After suitable heat treatment, the material is quite readily machinable. Vicalloy is available on special order in bar, strip and thin tape for recording purposes.

SILECTRON C, E, O AND DISTRIBUTED GAP CORES Precision-rolled Silectron strip in 1, 2, 4 and 12 mil thicknesses. They are supplied in a wide variety of shapes, and in sizes from a fraction of an ounce to several hundred pounds. In addition to standard transformer applications, they may also be supplied for special applications such as saturable reactors, instrument transformers and pulse transformers.

Distributed Gap Cores reduce watt loss by 30%, exciting current by 70% and cost by 10% over conventional 12 mil C cores of the same size and weight. Made of the best commercial grades of .012 grain-oriented silicon steel, cores are available in 36 basic sizes for power transformer and reactor applications.

Over 1,000 stock cores are listed in the Arnold Silectron catalog. A wide selection of preferred sizes are stocked for immediate shipment.

TAPE WOUND CORES OF HIGH PERMEABILITY MATERIALS Arnold tape wound cores are available made of Deltamax, 4-79 Mo-Permalloy, Supermalloy, Mumetal, 4750 Electrical Metal, Silectron, or the new rectangular-loop material, Supermendur. All except Supermendur cores are available in standard tape thicknesses of ½, 1, 2, 4 or 12-mils.

Toroidal cores are made in 30 standard sizes with protective nylon or aluminum cases. Special sizes produced to individual requirements. Wide selection of Deltamax, Square Permalloy and Supermalloy type 6T cores (aluminum cased, oil filled, hermetically sealed and epoxy coated) carried in stock for immediate shipment.

BOBBIN CORES Arnold bobbin cores are available in a wide range of sizes, tape thicknesses, widths and number of wraps to suit the ultimate use of the core in electronic computer assemblies. Magnetic materials usually employed are Deltamax and Square Permalloy in standard thicknesses of 1, ½, ¼ and ⅛ mil. Bobbins are supplied in ceramic or stainless steel.

MO-PERMALLOY POWDER CORES Available in a wide range of sizes, from .183" OD to 5.218" OD. They are given various types of enamel and varnish finishes, some of which permit winding with heavy Formex insulated wire without supplementary insulation over the core.

These powder cores are supplied in standard permeabilities of 14, 26, 60 and 125 Mu; high-permeability cores of 147, 173 and 205 Mu are also available in all sizes. They provide constant permeability over a wide range of flux density, and in many cases may be furnished stabilized to provide essentially constant permeability over a specific temperature range. Preferred sizes carried in warehouse stock for immediate shipment.

Typical group of Arnold permanent magnets, both cast and sintered types.

Typical group of permanent magnet assemblies.

Top to bottom: Tape wound cores, Silectron C, E and O cores, and bobbin cores.

ND OTHER **MAGNETIC MATERIAL** REQUIREMENTS . . .

Powder cores.

Laminations of silicon and nickel-iron.

Typical group of drawn transformer cans.

IRON POWDER CORES A wide selection of cores is available from simple cylinders to special cores of complicated design. The line includes all standard types of threaded cores, cup, sleeve, slug and cylindrical insert cores; for use in antenna and RF coils, oscillator coils, IF coils, perm tuning, FM coils, television coils, noise filter coils, induction heating and bombarder coils, and other low frequency applications. Preferred sizes are carried in warehouse stock for quick shipment. A standard series of iron powder toroids is also manufactured, conforming to the standard sizes adopted by the Metal Powder Industries.

LAMINATIONS AND FORMED PARTS Arnold produces a wide selection of silicon-steel, nickel-iron and cobalt-iron laminations for motors and transformers. Thin-gauge laminations (1, 2 and 4-mil thicknesses) of high-permeability materials are specialties. A complete line of transformer cans and hardware is available, including Mil-T specification. Shielding materials are available in bulk form, without annealing.

MSS IRON POWDER CORES have very high electrical resistivity yet lower magnetostrictive noise than other commercial iron powder even when cores are operated at saturation flux density.

SOFT FERRITES Arnold soft ferrite cores are available in a wide range of sizes and shapes. Ferrites may be used in RF coils, discriminator circuits, telemetering, multiplex receivers, IF band circuitry and pulse transformers.

ROLLED PRODUCTS Precision rolling and slitting of strip and foil from .069″ to .000069″ on virtually any material including alloys of aluminum, brass, copper, magnetic and nickel alloys, stainless steels and pure metals. Precision control of gauge tolerances and other mechanical and physical properties. Produced in the country's newest and cleanest conversion facility. Soft ferrites are ferremagnetic materials performing essentially as insulators. They are compounded from high purity oxide components and are processed according to techniques common to ceramic materials.

OGALLALA ELECTRONICS, a division of The Arnold Engineering Company is a leader in electromagnet technology featuring foil-wound coils from small (½″ x 2″) to large (4′ x 4′ x 6′), operable from liquid nitrogen-cooled to 500°C radiation cooled. Coils made for lasers, Helmholtz equipment, solenoids, tube focusing devices, high field magnetizing and de-magnetizing. Foil-wound coils offer better utilization of space, cooler operation, weight reductions and lower costs.
Ogallala Electronics offers an assembly capability for precision permanent magnet assemblies and electro-plating facility.

CHEMICAL MICRO-MILLING One of Arnold's newest lines is also one of its fastest growing. Produces a wide variety of Photoetched parts for the semiconductor and precision electronics fields. Located at Fullerton, California and has complete facilities which are undergoing rapid expansion.

Examples of clinically milled parts.

TABLE I
MATERIAL SPECIFICATION OF MAGNETIC BANDS

Magnetic Properties	Hypalon	Adiprene	Hypalon
Compound	98306	03866	98308
Coercive force *Hc-Oersteds	350	355	385
Remanence *Br - Gauss	720	510	690
Maximum Induction—Gauss	1130	800	1050
Physical Properties			
Tensile Strength, PSI Min. ASTM-D-412-51T-Die C	1500	1800	1500
Elongation Before Breakage, Min. ASTM-D-412-Die C	100%	200%	100%
Normal Elongation Recommended for Mounting	6%	6%	6%
Hardness, Shore "A" Durometer	85 ±5	80 ±5	85 ±5
Relaxation—Max. (Inches) ASTM-D-412-512-Die C.	.125"	.175"	.125"

*Magnetic properties are average values obtained from hysterisis loops and assumed magnetic cross sectional area. The loops were obtained using a 60 CPS magnetizing field of 4000 oersteds, peak to peak. Physical properties were determined from a random sampling of bands.

MAGNETIC BAND FREQUENCY RESPONSE

Brush BK-1090 Record—Reproduce Head.

Speed: 7½ in./Sec.

Record Current: 0.2 Milliamps/Winding (0.4 Milliamps Total)

Bias Current: 1.5 Milliamps/Winding (3.0 Milliamps Total) @ 50 KCPS

Optimum Record Current is taken as that current which produces an output 12 dB down from saturation.

Optimum Bias Current is that current which produces 2% or less third harmonic distortion at 750 CPS record signal.

Standard instrumentation Recording Tape

MAGNETIC LAMINATIONS Request Bulletin TB-108A

TAPE WOUND CORES Request Bulletin TB-105

"C" CORES Request Bulletin TB-109

MAGNETIC LAMINATIONS
...nickel alloys and grain-oriented silicon steel

Available without tooling charge in a wide variety of standard EI, EE, F, D IU, L shapes, in 6 and 14 mil thicknesses, of non-oriented (round loop) a oriented (square loop) 50% nickel alloys, high permeability 80% nickel alloy and grain-oriented silicon steel.

Exclusive G-L "Hy-Q" finish and use of highest quality carbide dies, provid high stacking factor, high interlaminar resistance, and high "Q" in tran formers, filters, reactors, chokes, and inductors.

Maximum initial permeability is obtained from precisely controlled hydroge anneals in closed furnaces. In the 80% nickel alloys, G-L "Mu-Max" lamina tions have raised the minimum initial permeability available to the designe by an average of 30%.

Special shapes are tooled in G-L's own Die Shop either with steel dies fo economical short-runs or in carbide for maximum die life. Typical specialtie are head laminations, spacers, and shields in thicknesses down to 1 mil, wit thickness tolerances as close as 50 microinches.

TAPE WOUND CORES and BOBBIN CORES

Promptly produced in gapless toroidal form—in sizes from 1/16" OD an 1/32" tape width...to more than 10" OD and 2-3/4" tape width, weighin thousands of grams.

Wide selection of available alloys, as tabulated below, cover applications from tiny pulse transformers for transistorized ignition systems to massive core for mag-amp controlled power supplies of missile launching submarines.

Cores are wound with 1/8 mil to 14 mil thick tape in various nickel alloys and silicon steel—uncased, or cased in a choice of aluminum, molded phenolic, or new glass filled nylon boxes...or on stainless or ceramic bobbins. Aluminum cased cores optionally available with G-L's "EE" coating, which not only eliminates taping before winding the core, but also provides a seal resistant to vacuum impregnation. The "EE" coating is neither tacky nor brittle, exhibits no cold flow, and does not soften at high temperatures. Aluminum cased cores, "EE" coated, have been used successfully in magnetic amplifiers at temperatures as high as 200°C., and have survived the shock of missile launching and in-flight centrifugal and centripetal forces, as high as 200 G.

"C" CORES

A wide range of 4 mil "C" cores from the smallest requirements up to approximately 4-1/2" in overall length are now available from stock. G-L "C" cores are produced by new manufacturing techniques with special emphasis on maintaining precise dimensional and electrical uniformity, to assure easy assembly and low power losses.

Because of new improved impregnation materials and techniques, "C" cores manufactured by G-L will operate continuously in temperature environments in excess of 200 degrees Centigrade without deterioration of the interlaminar bond.

AVAILABILITY:

LAMINATIONS—Stocks of all popular standard shapes, alloys, and thicknesses warehoused on both East and West Coasts for immediate shipment.

TAPE WOUND CORES—Stocks of IEEE, EIA standard sizes cased in plastic, aluminum, and EE coated, warehoused on both East and West Coasts for immediate shipment. Most other sizes available in quantity in less than two weeks.

"C" CORES—Prototype stock maintained on both East and West Coasts for immediate delivery.

BOBBIN CORES — Catalog bobbin sizes available in quantity in three weeks or less...bobbin cores are normally made to customer specifications.

PERMANENT MAGNETS

Many GE permanent magnets are stocked and may be ordered by catalog number. Where a stocked magnet does no meet all the application's requirements, General Electric can design a magnet that does. Engineering design assistance or information on stocked and special magnets is available on request.

ALNICO MAGNETS

- Radio and television speakers
- Telephones
- Refrigerator latches
- Electron tube assemblies
- Motors
- Generators
- Toys and novelties
- Space vehicles and missiles
- Controls

In today's industries, Alnico is still the most widely used permanent magnet material, and the growing family of Alnico grades continues to find new and ever-increasing usage.

This broad acceptance is the result of the wide range of magnetic properties obtainable with Alnico, the high degree of stability with respect to time and temperature, and the vast array of sizes and shapes that can be manufactured economically through General Electric's mass production methods.

The Alnicos are precipitation-hardened alloys made by conventional casting or sintered powder metallurgical techniques and a specialized heat treatment. Precise control of the various Alnico chemistries plus the heat treating process give the material its well-known qualities of high magnetic induction and high resistance to demagnetization.

The family of GE Alnico permanent magnets includes cast Alnico 3, 4, 5, 5DG, 5-7, 6, 8, 9, and sintered Alnico 2, 5, and 8. These various grades offer industry proven magnetic materials with a wide range of magnetic inductions and coercivities (resistance to demagnetization) in the exact shape and size required.

The versatility of Alnico, plus General Electric's advanced research and design and application engineering capabilities, continues to broaden the acceptance of these most widely used magnets.

LODEX® MAGNETS

- Hearing aids
- Core meters
- Miniature motors
- Speedometers
- Reed switches
- Timing motors

Lodex, the trade name of General Electric's recently developed magnet material, can be formed economically into precise close-tolerance shapes and small sizes for intricate applications.

A product of GE research and development, Lodex production techniques eliminate form grinding or high-temperature treating. This new magnetic material, consisting of elongated single domain iron cobalt particles in the size of smoke particles uniformly dispersed in a lead matrix, is pressed or extruded (rather than cast or sintered) into its final shape. Such a manufacturing process makes it possible to produce magnet shapes to extremely close physical and magnetic tolerances and to maintain close piece-to-piece magnetic uniformity.

Since its introduction, the family of Lodex magnets has found widespread and growing usage among manufacturers requiring intricate, tight tolerance shapes with a high degree of magnetic uniformity. Designers know that this physical and magnetic uniformity in their applications virtually eliminates the need for final testing of the end product and permits automation in the production process.

For complete information contact nearest GE Sales Office listed on inside front cover, or write to General Electric Co., Section 998-88, Schenectady, N. Y. 12305.

GENERAL ELECTRIC

Shown above is a miniature version (exact size) of the highly dependable and reliable HELISHAFT. Because of the extreme need for compactness, *Helitronics* has perfected the miniaturization of all its components; HELISHAFT*, HELIBLOC*, HELINUT* and HELISLIDE*. These poly-start threaded components working as highly efficient teams, divide the work load precisely and equally over each of the multiple threads, realizing a unique degree of accuracy and smoothness of flow, while minimizing wear. The high degree of refinement in today's electronic and mechanical techniques requires that same degree of perfection in all components of the equipment.

All industries including Microwave, Electronic Instruments, Missile, Medical, and Scientific Toys, have recognized the important part Helitronic parts are playing in today's demand for *progress*, with *reliability* and *dependability*.

HELINUT*

The HELINUT, a poly-start thin-walled internally threaded metal sleeve (a wall thickness as low as .010) is precisely mated to each individual HELISHAFT. The HELINUT is used as an embedment in our HELISLIDE. It can be potted, or press-fit and staked for your specific needs.

HELIBLOC*

Utilizing the favorable characteristics of Teflon†, the HELIBLOC is a poly-start internally threaded lead-nut or contact slider block, made in a variety of shapes and sizes, to fit your specifications. The design of the HELIBLOC has been tested and proven in the field to be a repetitively reliable mate for the HELISHAFT.

Send for your FREE informative & descriptive literature on all components of the Helitronic unit. All inquiries must be on company letterhead. For immediate information call the plant; area code 201 621-7773. Write our sales office for a representative to call on you.

Specify BERYLLIUM COPPER SPRINGS *micro-processed*

Specially developed equipment and production processes, combined with the broad experience of I-S engineers, assure higher efficiency and better performance in springs for electronic controls and high frequency applications. Only 100% laboratory certified raw material is used in the production of micro-processed precision springs.

All strips and rings on these two pages are made of beryl[illegible] copper Alloy No. 25, conforming to ASTM-B194 and Fed[illegible] QQ-C-533a Alloy 172. Strips are especially useful for gro[illegible]ing and bonding in high frequency equipment. Rings [illegible] made from contact finger stock, and are open in free p[illegible]tion. All are standard products available from stock!

Ask about "Sticky-Fingers"—the electronic shielding strips with self-adhesive!

TELCON METALS LTD.

is one of the largest and oldest manufacturers of nickel, iron and cobalt alloys for magnetic applications. Their fully integrated facilities provide raw materials and fabricated components covering the whole range of commonly used magnetic materials.

HIGH PERMEABILITY TOROIDS — are available in all materials listed in the accompanying table in standard tape thickness.

PHOTO-ETCH — high permeability alloys for recording and playback head laminations are available.

HIGH PERMEABILITY FOIL — SURFACE PREPARED FOR CHEMICAL ETCHING

MAGNETIC SHIELDS UP TO 30" DIAMETER FOR CATHODE RAY TUBES & TRANSFORMERS

by Magnetic & Electrical Alloys Ltd. and Telcon Metals Ltd.

An extensive range of standard shields are available for cathode ray tubes, transformers, chokes, photo multipliers, vibrators, high gain amplifiers and magnetic tape recorder heads. Special patterns also can be produced to meet individual requirements. Shields can be supplied in a wide range of magnetic alloys and are available either single or multilayer. Technical assistance available on your shielding problems.

TELFORM

DEEP DRAWN COMPLEX SHAPES

A NEW CONCEPT IN MAGNETIC SHIELD CONSTRUCTION

Specially developed for quantity production of high efficiency complex shields, new TELFORM construction utilizes precision drawn segments to drastically reduce welded seams. The result is extra close fitting shields with improved shielding characteristics. This new technique is applicable for CRT tubes up to approximately 20" long. No premium charge even though dimensions, finish and appearance are far more uniform throughout batches than conventionally fabricated shields. Rapid delivery after initial tooling. Available in 80%, 50% and 36% nickel-iron alloys up to 0.10" thick.

Extremely Competitive Prices on Custom Shields. Send for Illustrated Catalog and Ask for a Quotation. Substantial savings can be offered when Magnetic Shields and Tubes are purchased as assemblies. **Also see EEM page 2137.**

OTHER TELCON PRODUCTS:

- Thermostatic Bimetals
- High Permeability Strip, Rod & Wire For Component Manufacturing & Shielding
- Glass to Metal Seal Alloys.

TELMAG

E, C and TOROIDAL

Tape-wound cores

- Grain oriented Silicon Steel Components.
- Made to EIA Spec. RS217 & trade specifications primarily from American Allegheny-Ludlum "Silectron" by our British associate TELCON MAGNETIC CORES LTD. . . . one of the largest manufacturers of grain oriented silicon steel components.
- Available in all American standard or special sizes to American core numbers. Popular types available from New York warehouse for immediate delivery.
- Sold at prices that help you solve your constantly rising cost level problem—due to the unique combination of American material and one of the largest manufacturing facilities in the world.
- Now also available "Circular E cores" for improved performance of 3-phase transformers. Savings in weight, larger window area, better cooling and magnetically balanced circuits offer broad advantages over conventional 3-phase cores.
- Toroidal cores available in 2, 4, 6 and 12/13 mil tape thickness. Cores can be supplied impregnated or edge bonded for improved rigidity. Also available gapped or cut. Prices are always calculated by weight; there is no need to accept catalog sizes if your design calls for a special size.

COMPLETE PUBLISHED PRICE LIST AVAILABLE.

"C" CORE COMPRESSED AIR BANDING TOOL by TELMAG

Manufacturing rejects caused by variations in banding of "C" transformer cores can now be eliminated. The new "C" core Compressed Air Banding Tool provides consistent banding stresses in assembly-line operation. By making cores useful which were formerly rejected, the tool soon pays for itself.

NiFe MAGNETIC LAMINATIONS for TRANSFORMERS & CHOKES

by Magnetic & Electrical Alloys Ltd. . . .

. . . one of the largest commercial manufacturers of high quality NiFe alloy laminations in Europe. To find out the cost savings that M.E.A. can provide let us quote on your next requirement. For off-the-shelf delivery at the lowest quantity prices, many std. laminations are stocked in the United States.

SINGLE "E" LAMINATIONS TO REPLACE "EI187" AND "EE24-25" TYPES IN 6 MIL

An exclusive M.E.A. development that increases performance, reduces material cost, reduces labor cost. No modification of bobbin, clamps or other parts required, and when the final lamination has been inserted into the bobbin, the single "E" is practically self-clamping. End result is a 50% saving in assembly cost.

KE HERMETIC SEALS

NTEGRATED CIRCUIT PACKAGE

Four kinds of packages are introduced herein consisting of a combination of stacked glass and metal.

Metal is Kovar alloy and glass is made by Koto of a composition known as Koto Glass No. 701.

The perfect hermeticity and mechanical strength of the package is insured both by the good medium layer contained between metal and glass and also by the special material of glass, which has been achieved as a result of years research and development at Koto Electric.

To seal the Kovar alloy lid to the package after IC-mounting, it is recommended the use of gold-tin alloy or lead-tin-silver alloy solder.

1/4" × 1/8" FLAT PAK

1/4" × 1/4" FLAT PAK

14 LEAD DIP

16 LEAD DIP

BASE AND CAP FOR PHOTOEMISSION DIODE

These packages are used for Photoemission diodes such as Gallium Arsenide, Gallium Arsenide Phosphide etc.

The package consists of a cap with convex lens which is hermetically sealed to the window part and base of the compression seal.

The materials used are such as to result in unusual strength and thermal shock capabilities.

The windows are clear, without bubble, seed or cracks.

Caps with red color lenses are also available.

tape wound cores

applications

Magnetic Amplifiers **Reactors**
Converters **Regulators**
Inverters **Static Magnetic Devices**

These Tape Wound Cores are made from high permeability alloys of nickel-iron, grain oriented silicon-iron, and cobalt-iron. The alloys are known as Orthonol®, Alloy 48, Square and Round Permalloy 80, Supermalloy, Magnesil®, and Supermendur. Cores are available in all AIEE standard sizes and over 500 special sizes.

For a wide range of frequency applications, materials are produced in thicknesses from ½ mil through 14 mils. All core sizes can be provided in phenolic or plastic, aluminum, or GVB coated aluminum boxes. Magnesil® material, being less sensitive to external stresses, is also available unboxed or epoxy encapsulated. Commonly used sizes are in stock for immediate shipment.

applications

Inductors for high Q, low loss filter circuits
Loading Coils
Transformers
Chokes

For linear applications, these cores are available in permeabilities of 14, 26, 60, 125, 160, 200, 300, and 550 and have guaranteed inductance limits of ±8%. Insulation on cores is a high dielectric strength finish not affected by normal potting compounds and waxes. 16 sizes include ID's from 1.40″ to .110″ and OD's from 2.25″ to .250″. Standard cores include either temperature stabilized (as wide as −65°C to +125°C) or unstabilized. Most core types can be shipped immediately from stock.

Ferrite Catalog FC-208S
Iso-Q Contour Curves
Ferrite Core Calculator (slide rule)

High purity manganese zinc ferrite pot cores exhibit low loss characteristics and exceptionally low disaccommodation. They are available with linear temperature characteristics (−30°C to +70°C) in permeabilities of 750, 1400, and 2000, or flat temperature characteristics (+20°C to +70°C) in a 2300 permeability material.

For transformer applications, the inductance of ungapped pot cores is guaranteed to ±20%; for filters, cores are gapped to standard inductance factors guaranteed to ±3%. Thirteen physical sizes (7 x 4 mm to 36 x 22 mm, including 8 international standard sizes) are stocked, and each size offers a variety of standard inductance values from which to choose.

In addition to a complete selection of tuning assemblies, the line also features a unique one-piece spring steel mounting clamp and bobbins for chassis or printed circuit board designs.

Other available types include toroids, E, and U-I cores. Special shapes can also be provided.

special components

In addition to the standard high quality component lines, Magnetics Inc. offers unique capabilities in the design and manufacture of specialized components fabricated from any alloy and in any size or shape. — Expertly staffed laboratories are complete with the most modern magnetic testing equipment, pilot plant facilities, and large scale production equipment for processing components in powdered, sintered, strip, wire, rod or other forms. — Special components for custom applications include unusual core configurations from strip as thin as ⅛ mil, or flat intricate pieces made by the chemical milling technique. Also included are various shapes pressed from powders and then sintered and/or annealed. — Components can be made from custom-blended magnetic or specialty alloys which are processed through the company's Metals Division. — Send specific inquiries to the Magnetics Inc. Special Products Dept.

agnetic laminations

applications

Quality Transformers
Chokes
Reactors

Hydrogen annealed Laminations, manufactured to guaranteed minimum permeability limits, are available in Permalloy 80, Alloy 48 and Orthonol®, in thicknesses of .004", .006", and .014". Thirty-eight standard shapes in sizes ranging from the DU-87 and the EI-12 down to the EI-093, EE-30-31, DU-63 and the F-094, can be shipped from stock or on special order. Special shapes can be made to fit specific needs, including rotor-stator and recording head laminations.

Small, intricate, or thin (to .0005") parts can be produced by a photo-etching, or chemical milling process.

literature available

Catalog ML-303R (Standard Laminations)
Bulletin PF-1 (Photo-etched Parts)

hotofab parts

applications

Any thin gauge (.030" to .0005") metal parts

Precision flat components from any magnetic or specialty alloy can be made inexpensively and quickly by the Magnetics Inc. photo-etch process. Small shapes can be chemically milled in prototype quantities at low cost, then later tooled for stamping when the item reaches the production stage.

The process is particularly effective for intricate configurations made from materials less than .006" thick. Materials are available in thicknesses ranging from .030" to .0005". Tolerances on dimensions depend on the type of material and thickness of the part being produced.

Rotors and stators, head laminations, and integrated circuit flat pack lead pre-forms are only a few of the parts which can be made. Any part that can be stamped can also be produced as a Phofab® Part.

Complete metal processing facilities provide special alloy compositions.

literature available

Bulletin PF-1

specialty alloys

Rod, wire, and thin gauge strip products are manufactured by a powder metallurgy process which is extremely effective where close control of chemistry (±0.01%) is required. In addition, this metallurgical approach produces a homogeneous alloy with trace elements at a level of less than 0.005%. As a result, physical properties are uniform within each heat and from heat to heat.

A wide range of standard compositions including Ni-Fe, Ni-Fe-Mo, Ni-Co-Fe, Ni-Cr-Fe, etc., is available, as well as alloys blended to specific customer requirements. Areas of application include electronics, glass sealing, vapor deposition, and specialty plating anodes.

For initial customer evaluations, laboratory pilot production equipment provides small quantities. In production facilities, these alloys and products can then be scaled up with precise duplication of composition and properties.

A variety of conventionally melted alloys is available by conversion reroll to thin gauge strip (0.0005"-0.005"). Mill services include tension leveling, slitting, strip annealing, and billet sintering.

JAMES MILLEN MFG. CO., INC.
MAIN OFFICE AND FACTORY
MALDEN, MASSACHUSETTS, U.S.A.

Product Summary For Quick Reference ME-40

Name	POLASTRIP
Function	General purpose EMI and Pressure Gasketing
Forms	Strip material and fabricated gaskets
Construction	Oriented wire conductive paths in matrix of silicone
Gasket Height	.062 to .625 inches
Max. Joint Unevenness	.010 to .100 inches
Gasket Compression Force	20 to 100 p.s.i.
EMI Rating	14kHz(H) 46db; 18MHz(E) >102dB; 1.0GHz(P) >93dB

METEX Polastrip™

AVAILABLE FORMS

Polastrip: Composite EMI and pressure gasketing strip ⅛″ x ⅛″ to ⅝″ x ½″ in cross section. See table 1 for full tabulation. Other sizes also available. Conductive paths are either Monel or Aluminum oriented wire.

Combo Polstrip: A strip gasket material with the conductive paths molded into only one edge of the strip. Recommended for particularly difficult pressure sealing problems. See table 2 for full tabulation. Other sizes also available.

Polastrip or Combo Polastrip Fabricated Gaskets: Metex will fabricate to your specifications ready-to-use gaskets made from either Polastrip or Combo Polastrip. See drawing standards on this page.

SPECIFICATIONS

Elastomer: Solid silicone per MIL-R-5847 and ZZ-R-765 (color gy Sponge per AMS-3195

Temperature Range: −70°F to 500°F.

Conductive Paths: Monel — QQ-N-281-A; Aluminum — AMS-4182A

HOW TO ORDER

Strips: Select part number from tables 1 and 2. Supplied in multiple o 18 ft. (continuous lengths on special orders).

Fabricated gaskets: Supply drawings, sketches or dimensional tabulat based on drawing standards outlined below.

METEX Pola-H™

FIGURE 1

Product Summary For Quick Reference **ME-41**

HIGH PERFORMANCE EMI AND PRESSURE SEALING GASKETING

Especially designed for low frequency Magnetic (H) Fields

Name	**POLA-H**
Function	EMI and Pressure Gasketing
Forms	Strip Material, Fabricated Gaskets
Construction	Highly conductive paths in silicone elastomer
Gasket Height	0.12 to 0.62 inches
Max. Joint Unevenness for above heights	0.02 to 0.10 inches
Gasket Compressing Force	20 to 100 p.s.i.
EMI Rating	14kHz(H) 56dB; 18MHz(E) >102dB; 1.0GHz(P) >93dB
Pressure Sealing	To 250 p.s.i.

SPECIFICATIONS

Elastomer: Solid silicone per MIL-R-5847 and ZZ-R-765 (color gray), temperature range −70°F to 380°F.

Conductive Paths: Solid, continuous copper ASTM-D-152, tin plated.

Contact Points: Alloy coated in special process to assure maximum conductivity and maximum corrosion protection.

HOW TO ORDER

Strips: Select part number from Tables 1 and 2. Supplied in multiples of 18 ft.

Fabricated Gaskets: Supply drawings, sketches or dimensional tabulations based on standard in figure 2.

For further information and design assistance call Metex or your local representative. Never any obligation!

AILABLE FORMS

LA-H material is available in three basic forms:

LA-H Strips: From 1/8" x 1/8" to 5/8" x 5/8" in cross section. See Table for full tabulation.

LA-H Combo Strip: A strip gasket material with the conductive paths olded into only one edge of the strip. Recommended for particularly fficult pressure sealing problems. See Table 2 for full tabulation.

LA-H or POLA-H Combo Fabricated Gaskets: Metex will fabricate to ur specifications ready-to-use gaskets made from either POLA-H or LA-H Combo Strips. Use figure 2 for drawing standards when prepar- g your drawings.

any cost saving variations of part numbers and designs shown on this age are available; use METEX DESIGN ASSISTANCE SERVICE. Metex ffers the most complete and most experienced design assistance in e industry at no obligation. Call Metex, Cal-Metex, or your local epresentatives (listed in the yellow pages).

ull design procedures in the complete Metex catalog, ME-30, sent free n request.

METEX
EMI Strips™
(all metal)

Product Summary For Quick Reference ME-42

Name	Metex ÉMI Strips (all metal)
Function	EMI Gasketing
Forms	Round and rectangular cross section strips, also with attachment fins
Construction	All resilient knitted wire mesh
Gasket Height	.062 to .500 inches
Joint Unevenness	.020 to .160 inches
Gasket Compressing Force	5 to 100 p.s.i.
EMI Rating	14kHz(H) 25-30dB; 18MHz(E) >102dB; 1.0GHz(P) 83 >93dB

AVAILABLE FORMS

Strips: METEX EMI Strips are continuous gasketing material made from resilient knitted wire mesh. Standard cross sections are round, rectangular, round with attachment fin, and double round with attachment fin (see sketches with tables). Standard materials are Monel, aluminum and Ferrex.™(1) Other sizes, cross sections and materials are also available.

Fabricated Gaskets: All of the listed METEX EMI strips can be formed and joined into ready-to-use one piece fabricated gaskets.

(1) Metex Trademark for tin plated, copper clad steel gasketing.

SPECIFICATIONS

		% By Weight
Monel	QQ-N-281B or AMS-4730-A	
Aluminum	Alloy 5056	
Ferrex (Tin plated, copper clad, steel)		
Steel Wire	SAE 1010	57%
Copper Cladding	ASTM B-227	40%
Tin Plate	ASTM B-33 MIL-W-3861	3%

HOW TO ORDER

Strip Materials: Are ordered by part number from tables 1, 2, 3 or 4. Strips are usually supplied on spools in continuous lengths.

Fabricated Gaskets: Since such details as corner radii, corner and joint construction vary with type and size of EMI strip, it is not possible to show a simple drawing standard. Please supply sketch or verbal description based on this outline.

For variations of part numbers and designs shown on this page use METEX DESIGN ASSISTANCE SERVICE. Call Metex, Cal-Metex, or your local representative listed in yellow section.

HOW TO ORDER (Cont'd)

1. Choose strip by part number.
2. Specify inside dimensions or diameter for these cross sections:

FIGURE 2

Or outside dimensions or diameter for this cross section:

FIGURE 3

3. **Tolerances:** A x B or dia. are:
   0-5″; ±.03
   5-10″; ±.06
   Over 10″; ±.06 for every 10″.
4. On request METEX will supply a detailed drawing conforming wit your description.

TOLERANCES (for Tables 1 thru 4)

Rectangular Strips	Round Strips
.062 to .188, +.015 −.000	.062 to .125, +.015 −.000
over .188 to .375, +.032 −.000	over .125 to .188, +.032 −.000
over .375 to .500, +.047 −.000	over .188 to .375, +.047 −.000
over .500 to 1.000, +.062 −.000	over .375 to .750, +.062 −.000

Measured under 4 ounce load with ¾″ anvils on a Federal Product Model 22P hand snap gauge or equivalent.

Single Round with Fin and Double Round with Fin, overall width.
up to 1.00, ±.06
Over 1.00, ±.12

METEX EMI Strips™
(elastomer core)

Product Summary For Quick Reference ME-43

Name	METEX EMI Strips (elastomer core)
Function	EMI sealing. Also some dust, drip, and rain sealing
Forms	Round and rectangular cross section strips, also with attachment fins
Construction	Knitted wire mesh over sponge elastomer core.
Gasket Height	.125 to .625 inches
Joint Unevenness	.050 to .300 inches
Suggested Compression Force	5 to 100 p.s.i.
EMI Rating	14 kHz(H) 25 to 35dB; 18MHz(E) >102dB; 1.0GHz(P) >93dB

AVAILABLE FORMS

Strips: Two covers of wire mesh are knitted over rectangular or round neoprene or silicone sponge elastomer. The round cross section is also available with an attachment fin (see sketches with tables). Standard materials for the knit cover are Monel and Ferrex.™(1) Many other sizes, cross sections and materials are also available.

Fabricated Gaskets: Many of the listed Metex EMI elastomer core strips can be formed into ready-to-use one piece fabricated gaskets.

(1) Metex Trademark for tin plated, copper clad steel gasketing.

(1) Metex™ for tin plated, copper clad steel gasketing.

SPECIFICATIONS

Neoprene Sponge	MIL-R-6130B Type II, Grade A Condition Medium, −30°F to 150°F	
Silicone Sponge	AMS-3195 −80°F to 400°F	
Monel	QQ-N-281B or AMS-4730-A	
Ferrex (Tin plated, copper clad steel)		% By Weight
Steel Wire	SAE 1010	57%
Copper Cladding	ASTM B-227	40%
Tin Plate	ASTM B-33 MIL-W-3861	3%

TOLERANCES

Rectangular Elastomer		Round Elastomer
Up to .125	+.031 −.015	Up to .500 dia. ±.031
Over .125 to .375	±.031	Over .500 dia. ±.047
Over .375 to .750	±.062	

Above dimensions and tolerances refer to the elastomer core. Outsi dimensions or diameters including mesh covers will be approximate .031 greater.

Overall Width Round, Single-Fin

Up to 1.00 ±.06
Over 1.00 ±.12

HOW TO ORDER

Strip Material: Are ordered by part number from tables 1, 2 or Strips are usually supplied on spools and in continuous lengths.

Fabricated Gaskets: Metex EMI elastomer core strips are not as easi joined into one piece fabricated gaskets as some other Metex gasketin strips (all metal EMI strips, Metalex). We, therefore, suggest that th designer write or call Metex or the local Metex Engineering Rep. Ind cate by part number the strip you would like to have fabricated into gasket. State the overall dimensions of the gasket. Metex will eithe supply a drawing for the fabricated gasket or suggest an alternat design that will satisfy all your requirements.

ETEX
mbo-Strip®

Product Summary For Quick Reference **ME-44**

Name	Combo-Strip
Function	EMI and Pressure Gasketing
Forms	Rectangular cross section strips
Construction	METEX EMI strips in parallel with elastomer
Gasket Height	.062 to .375 inches
Joint Unevenness	.012 to .075 inches
Suggested Compression Force	20 to 100 p.s.i.
EMI Rating	14kHz(H) 30dB; 18MHz(E) >102dB; 1.0GHz(P) >93dB

LABLE FORMS

s: Standard Combo-Strips are available with sponge neoprene or ge silicone elastomer portion and with Monel or Ferrex™(1) EMI eting. Cross sections are shown at top of each table. A version two EMI strips is also standard. For attachment convenience, sure sensitive adhesive backing is available on all standard Combo-s. Many other versions also available, call or write Metex or local ineering representative.

ricated Gaskets: Please refer to data sheet for Combo Gaskets®, n ME-60. Combo Gaskets have cross sections similar to Combo-Strips the rubber portion is die cut from sheet and thus has no joints. s construction is preferred to joined Combo-Strips with a joint at h corner.

ECIFICATIONS

stomer Materials

oprene Sponge	MIL-R-6130B, Type II Grade A, Condition Medium (−30°F to 150°F)

MI Gasketing Materials

onel	QQ-N-81B, AMS-4730-A	
errex (Tin plated, copper clad steel)		% By Weight
Steel Wire	SAE 1010	57%
Copper Cladding	ASTM D-227	40%
Tin Plate	ASTM B-33	3%
	MIL-W-3861	

OLERANCES

Dimension A
062 to .125; +.031, −.015
Over .125 to 3.75; ±.031

Dimension B
p to 1.00; ±.031

Dimensions C & D
.062 to .188; +.015, −.000
Over .188 to .375; +.031, −.000

Measured under a 4 oz. load, ¾" anvils on a Federal Products Model 22P hand snap gauge or equivalent.

(1) Metex Trademark for tin plated, copper clad steel gasketing.

For variations of part numbers and designs shown on this page use METEX DESIGN ASSISTANCE SERVICE. Call Metex, Cal-Metex, or your local representative listed in yellow section.

HOW TO ORDER

Strip Materials: Order by part number from tables. If none of the listed parts are suitable specify desired cross section dimensions A, B, C, and D; elastomer material and EMI gasketing material. Specifications on some suggested alternate elastomers are listed under "Specifications."

IMPORTANT: For solid elastomers, the EMI gasket is normally .031" thicker than elastomer thickness; see figure 4.
Material is usually supplied rolled on itself (like roll of tape and shipped lying flat between layers of cardboard.

Fabricated Gaskets: See data sheet on Combo Gaskets form ME-60.

Adhesive Backed: All of the listed Combo-Strips can be ordered with pressure sensitive adhesive backing by a simple part number change: for neoprene change the "2" with shaded background to a "6". For silicone change the "3" with shaded background to a "7".

For example: 01-0201-1134 without adhesive becomes 01-0601-1134 with adhesive.

METEX
Metalex®

Product Summary For Quick Reference ME-4

Name	Metalex
Function	EMI Gasketing (Some parts also weathe gasketing)
Forms	Rigid strips, fabricated lengths, fabricated frames
Construction	Metex EMI strips clamped into aluminum extrusion
Gasket Height	.154 to .250 inches
Joint Unevenness	.031 to .125 inches
Suggested Compression Force	5 to 100 p.s.i.
EMI Rating	14kHz(H) 30dB; 18MHz(E) >102dB; 1.0GHz(P) >93dB

SPECIFICATIONS

Aluminum Extrusion 6063-T-42
Optional Finish ..... Irridite per MIL-C-5541

EMI Gasketing Material

Monel ..... QQ-N — 281B or AMS-4730-A
Ferrex (Tin plated, copper clad steel)

		% By Weight
Steel Wire	SAE 1010	57%
Copper Cladding	ASTM B-227	40%
Tin Plate	ASTM B-33 MIL-W-3861	3%

Weather Sealing Material

Sponge neoprene ..... MIL-R-6130B Type II, Grade A Condition Medium
Sponge Silicone AMS-3195

AVAILABLE FORMS

Bulk Strips: Metalex as listed can be supplied in 15 or 7½ ft. lengths. Ends of EMI gasketing will not be finished. EMI gasketing can be Monel, or Ferrex.™(1) An elastomer weather sealing gasket can be supplied on any Metalex strip with single EMI gasketing. Many other extrusions and EMI gasket combinations also available, call Metex or local representative.

Fabricated Lengths: Custom-fabricated lengths of Metalex are supplied to close tolerances, with holes as required and with finished ends on EMI gaskets.

Fabricated Frames: Metalex is most frequently supplied as custom fabricated, ready-to-install frames. Holes and other machine operations are usually included.

FIGURE 2 — NOTCH & BEND CONSTRUCTION (Semi-Rigid Frame)

FRAME MAY BE JOINED IN CORNER OR ALONG ONE SIDE, AND IS HELI-ARC WELDED ON ONE SURFACE ONLY.

Metalex®

TO ORDER

Strips: Order by part number using one element, as indicated, each of tables 1, 2 and 3 and combining thus:

06 — 01XX — YYYY — ZZ

- ZZ — EMI Gasket, table 2
- YYYY — Mount Strip, table 1
- 01XX — Weather Seal, table 3

example: the strip shown in figure 4 is part 06-0131-6075-42. dard lengths 7½ and 15 ft. Shipped straight in shipping tubes.

Fabricated Lengths: Supply sketch or drawing based on drawing standard shown (figure 5). Specify Metalex by part number, cross sectional tolerances per table 1, 2 and 3. Indicate if optional Irridite finish is required.

Fabricated Frames: Two standard frame constructions are available:

— All corners welded, figure 3. This is most rigid version and has tightest dimensional control. EMI gasketing can be either around inside of or outside of frame.

— Notched and bent, figure 2. This is less rigid, but manufacturing costs are lower. EMI gasketing can only be on inside of frame.

Choose version that most nearly meets your needs on rigidity, dimensional control and cost. Then supply sketch or verbal description based on drawing standard in figure 2 or 3.

Many other variations of these standard parts and fabricated forms are available at reasonable cost. Call Metex or local representative for design assistance. Never any obligation.

METEX
Polasheet™ and Polastick™

Product Summary For Quick Reference **ME-50**

Name	Polasheet and Polastick
Function	EMI and Pressure Gasketing Sheet material, cut gaskets. (Polastick with adhesive backing)
Construction	Oriented wire conductive paths in a matrix of elastomer
Gasket Height	.055 to .250 inches
Joint Unevenness	.008 to .050 inches
Suggested Compression Force	20 to 100 p.s.i.
EMI Rating	14kHz(H) 35dB; 18MHz(E) >102dB; 1.0GHz(P) >92dB

AVAILABLE FORMS

Sheet Material: Standard sheet sizes for both Polasheet and Polastick are 3" and 4½" by 3 ft. long. Wider sheets are made by joining 3" or 4½" wide sheets. The elastomer is sponge or solid silicone, conductive paths are Monel or aluminum.

Adhesive Backing: Polastick is Polasheet with pressure sensitive adhesive backing for easy mounting.

Custom Cut Gaskets: Figure 2 shows drawing standards for custom cut gaskets. Tooling costs are very nominal.

Connector Gaskets: Polasheet and Polastick gaskets designed for standard connectors are listed in data sheet "Connector Gaskets" ME-55.

SPECIFICATIONS

Solid Silicone: MIL-R-5847 and ZZ-R-765 (color gray) temperature −70°F to 500°F.

Sponge Silicone: AMS-3195, −80°F to 400°F.

Conductive Paths: Monel wire, QQN-281-B, Aluminum — AMS-4182, Alloy 5056.

Adhesive: Shear strength 2 p.s.i. peel strength 4 oz. For best results apply 20 p.s.i. force to gasket to fully activate pressure sensitive adhesive. Adhesion improves with age.

Shelf Life: Applies to adhesive only — 50 days.

HOW TO ORDER

Sheets: All sheets are 3" or 4½" x 36". Order by part number from table 1. If width more than 4½" is required, METEX will bond two or more sheets together.

CUSTOM CUT GASKETS

Supply drawing or sketch to standards shown in figure 2. Also specify one of the standard thicknesses from table 1.

Connector Gaskets: Order by part number from tabulation in data sheet "Connector Gaskets," form ME-55.

For variations of part numbers and designs shown on this page use METEX DESIGN ASSISTANCE SERVICE. Call Metex, Cal-Metex, or your local representative listed in yellow section.

METEX Metalastic®

AVAILABLE FORMS

Sheets: Standard sheet width for Metalastic is 8″, standard thicknesses are .016″ and .020″. Woven wire is aluminum, the elastomer is either neoprene or silicone.

Die Cut Gaskets: Figure 2 shows drawing standards for die cut gaskets. Tooling costs are nominal.

Connector Gaskets: Metalastic gaskets designed for standard connectors listed in data sheet "Connector Gaskets" ME-55.

SPECIFICATIONS

Aluminum	.016″ Thick:	30 x 30 mesh
	.020″ Thick:	24 x 24 mesh
	Both:	AMS-4182A
Neoprene	AMS-3222C	−40°F to 225°F
Silicone	AMS-3302B	−65°F to 500°F

HOW TO ORDER

Sheet: Order by part number from table 1. All sheets are 8″ wide. Supplied in random lengths of at least 3 ft.

Custom Cut Gaskets: Supply drawing or sketch to standard shown in figure 2. Also specify standard material from table 1.

Connector Gaskets: Order by part number from tabulation in data sheet "Connector Gaskets," form ME-55.

For variations of part numbers and designs shown on this page use METEX DESIGN ASSISTANCE SERVICE. Call Metex, Cal-Metex, or your local representative listed in yellow section.

METEX Xecon

conductive elastomer

Product Summary For Quick Reference ME-54

Name	XECON (eXtra Electrically CONductive)
Function	EMI and Pressure Gasketing
Forms	Sheets, die cut gaskets, molded shapes
Construction	Silver on inert substrate in matrix of silicone
Gasket Height	.020 to .156 inches
Joint Unevenness	.003 to .030 inches
Suggested Compression Force	20 to 100 p.s.i.
EMI Rating	14kHz(H) 35dB; 18MHz(E) >102dB; 1.0GHz(P) >95dB; 10GHz(P) 70dB

AVAILABLE FORMS

Sheets: 15 x 15, .020 to .156 inches thick.

Die Cut Gaskets: .020 to .156 inches thick (see data sheet ME-55 for XECON gaskets for standard connectors).

Waveguide Gaskets

DESCRIPTION

XECON is the name for the complete line of conductive elastomers from Metex. It is the result of more than a year of intensive research and development work with a goal to offer a uniquely better conductive elastomer. XECON is this better conductive elastomer:

1. Silver is deposited on an inert substrate eliminating chemical reaction with the metalic substrates often used.
2. The inert substrate is also much lighter, thus XECON is also lighter; typically its specific gravity is 1.9.
3. XECON, unlike some other conductive elastomers, can be exposed to up to 200°C for extended periods without loss of conductivity.
4. XECON will also be available in other than silicone elastomers.

DEVELOPMENT STATUS

At the deadline time for this EEM page, the basic R & D work on XECON was completed, only the detail work of releasing specific compounds remained. The first compound XECON CS-1 was released. Complete specifications are detailed below. Additional compounds with durometers ranging from 60 to 75 and variations in tensile and elongation are scheduled for release by May 15, 1970.

By June 15, 1970 a new family of XECON compounds with durometers between 40 and 60 will be released to answer the need for conductive elastomers with lower durometers.

THEREFORE BE SURE TO CALL METEX OR YOUR LOCAL REPRESENTATIVE FOR THE LATEST DATA SHEETS ON XECON

TABLE 1

Part Number	Thickness	Sheet Size
20-0201-1515	.020	15 x 15
20-0301-1515	.031	15 x 15

W TO CHOOSE GASKETING MATERIAL

st General Purpose: The best general purpose aterial is Porcupine® Metalastic. It can compen- te for joint unevenness to .005″ and thickness .030 ±.004.

rge Joint Unevenness: If the surface on which the nnector is mounted is likely to have a poor fit rge joint unevenness) then Polasheet™ is recom- ended. It can compensate for joint unevenness of 08″ and material thickness is .055 +.010 −.005.

est Pressure Sealing: Xecon™ offers best pres- re sealing capabilities. Material thickness is 31 ±.005.

inimum Space: Metalastic® is recommended only r applications where space is tight. It can mpensate for .001 to .002 joint unevenness but only .020 ±.004 thick. The silicone version is ecommended for temperature extremes (−65°F 500°F) and neoprene for −40°F to 225°F.

dhesive Backing: All Polasheet gaskets are also vailable with pressure sensitive adhesive backing alled Polastick) for convenient mounting.

OW TO ORDER

rder by part number from tables 1, 2 3, or 4. ote that Polastick™ (Polasheet with pressure ensitive adhesive) is not listed separately. Order olastick by adding -77 to the listed Polasheet umber i.e., Polasheet is 07-0501-0010, the equiva- ent Polastick is 07-0501-0010-77.

METEX Combo Gaskets®

Product Summary For Quick Reference ME-60

Name	Combo Gasket
Function	EMI and pressure gasketing
Forms	Custom Fabricated gaskets
Construction	Die cut elastomer plus joined EMI gasketing strip
Gasket Height	.062 to .250 inches
Joint Unevenness	.012 to .050 inches
Suggested Compression Force	20 to 100 p.s.i.
EMI Rating	14kHz(H) 30dB; 18MHz(E) >102dB; 1.0GHz(P) >93dB

AVAILABLE FORMS

Combo Gaskets are available as custom fabricated gaskets (for the same construction in strip form see data sheet for Combo strips, ME-44). The most common thickness is .125", but .062", .092", .188" and .250" are also readily available. See "Specifications" for list of available elastomers and EMI gasketing. Compression stops to prevent overcompression of sponge elastomers are available. Pressure sensitive and solvent activated adhesive backing is available on all Combo Gaskets.

SPECIFICATIONS

Elastomer Materials

Neoprene Sponge	MIL-R-6130B, Type II, Grade A, Condition Medium (−30°F to 150°F)
Silicone Sponge	AMS-3195 (−80°F to 400°F)
Neoprene Solid	MIL-R-6855, Class II Grade 40 (−45°F to 220°F)
Silicone Solid	MIL-R-5847, Class II, Grade 40 (−130°F to 500°F)
Buna N Sponge	MIL-R-6130A, Type II, Grade B (−60°F to 160°F)
Buna N Solid	MIL-R-6855, Class II, Grade 40 (−60°F to 220°F)

EMI Gasketing Materials

Monel QQ-N-281B, AMS-4730-A

Ferrex (Tin plated, copper clad steel)

		% By Weight
Steel Wire	SAE 1010	57%
Copper Cladding	ASTM D-227	40%
Tin Plate	ASTM B-33 MIL-W-3861	3%

HOW TO ORDER

First choose the elastomer material.

Sponge materials are recommended for applications requiring a high degree of compressibility and pressure differences are small.

Solid materials are recommended for use in joints that must maintain a high pressure difference and require less compressibility.

Neoprene is a good general purpose rubber, but is limited in temperature range and cannot be used with some hydrocarbons that cause it to swell.

For variations of part numbers and designs shown on this page use METEX DESIGN ASSISTANCE SERVICE. Call Metex, Cal-Metex, or your local representative listed in yellow section.

HOW TO ORDER (Continued)

Buna-N has a greater temperature range and is resistant to more hydrocarbons and solvents than neoprene.

Silicone is used for applications requiring a maximum temperature range.

Thickness: Most common thickness is .125". Use this whenever possible; .062" should only be used when space does not permit .125" or .092". Combo Gaskets seldom need to be more than .250" thick, but are available.

Then supply sketch or drawing based on standards shown in figure 2. Also specify elastomer and EMI gasketing material. Preferred elastomers and EMI gasketing materials are tabulated in the specifications. Also specify pressure sensitive or solvent activated adhesive if desired. Specify compression stops for sponge elastomers if desired in accordance with figure 2. Many other elastomers and EMI gasketing are also available.

FIGURE 2

WASHER TYPE (Use at screw holes)

SOLID TYPE (Use between screw holes)

DRAWING STANDARDS

[1] Minimum wall thickness should equal elastomer thickness. "U" Slots should be used if minimum wall requirement cannot be met.
[2] Hole diameter should be equal to or greater than elastomer thickness.
[3] Minimum width of elastomer portion is the greater of 1/8" or elastomer thickness.

Dimensions		Solid Elastomer	Sponge Elastomer
A, B, C, & D		±.015 min. ±.015 for each 5" Length	±.031 min. ±.031 for each 5" Length
G & J		±.015 min. ±.015 for each 5" Length	±.015 min. ±.015 for each 5" Length
K & L	.062 - .125	±.015	+.031 −.015

METEX Polaring™

Product Summary For Quick Reference ME-61

Name	Polaring
Function	EMI and Pressure Sealing
Forms	Jointless annular rings
Construction	Oriented wire conductive paths in matrix of silicone
Gasket Height	.062 to .625 inches
Joint Unevenness	.012 to .100 inches
Suggested Compression Force	20 to 100 p.s.i.
EMI Rating	14kHz 46dB; 18MHz >102dB; 1.0GHz >93dB

AVAILABLE FORMS

Polarings are annular rings. Inside diameters range from .250″ to 9.00″, wall thickness from .062″ to .500″ and gasket height from .062″ to twice wall thickness. Elastomer is solid silicone, conductive paths are Monel. Some sizes can be made with sponge silicone. Available tooling is listed in table 1 and table 2.

SPECIFICATIONS

Elastomer	Solid silicone per MIL-R-5847 and ZZ-R-7 (color gray)
Temperature Range	−70°F to 500°F
Conductive Paths	Monel per QQ-N-281-B

HOW TO ORDER

From Available Tooling (solid silicone only)

Polaring sizes for which tooling is available are listed in table 1 (4 Durometer Silicone) and table 2 (25 Durometer Silicone). To order par with solid silicone elastomer simply replace XXX in part number wi height in three place decimals; for instance:

07-9042-0062 is .750 I.D., 1.00 O.D. and .062 high and

07-9042-0125 is .750 I.D., 1.00 O.D. and .125 high

Sponge Silicone

Some of the tooling listed in table 1 can be used for Polarings mad with Sponge Silicone. Order by O.D., I.D., and Height.

Other Sizes

Tooling for other sizes is relatively inexpensive and available on shor delivery. Order by O.D., I.D., and Height and specify solid or sponge silicone.

METEX Compressed® EMI Gaskets™

Product Summary For Quick Reference **ME-62**

Name	**Compressed Metex EMI Gaskets**
Function	EMI Gasketing
Forms	Jointless, die formed gaskets
Construction	Compressed knitted wire mesh
Gasket Height	.040 to .375 inches
Joint Unevenness	.015 to .100 inches
Gasket Compressing Force	5 to 100 p.s.i.
EMI Rating	14kHz(H) 25-30dB; 18MHz(E) >102dB; 1.0GHz(P) >93dB

AVAILABLE FORMS

Rings: The most common form for Metex EMI compressed gaskets is an annular ring. Table 1 lists units designed for specific waveguides and table 2 lists available tooling for other popular sizes. Many other sizes also available.

Rectangular Units: Rectangular Metex EMI compressed gaskets with constant wall are also available (see figure 1).

Other Forms: More complex shaped compressed Metex EMI gaskets are also possible. Consult Metex or local representative.

SPECIFICATIONS

Monel ..... QQ-N-281 Class A or AMS-4730-A
Aluminum ..... AMS-4182, Alloy 5056
Ferrex (Tin plated, copper clad steel)

		% By Weight
Steel Wire	SAE 1010	50%
Copper Cladding	ASTM B-227	40%
Tin Plate	ASTM B-33 MIL-W-3861	3%

HOW TO ORDER

Waveguide Gaskets: Order by part number from table 1, tolerances per table 3.

Annular Rings (existing tooling): METEX has the largest selection of existing tooling. A few are listed in table 2. Pick size by die number. Specify gasket height (not less than .040", not more than twice wall width). Specify Monel, aluminum or Ferrex and compressibility (soft, medium or hard). Tolerances in table 3 apply to nominal dimensions in table 2.

Other Sizes and Shapes: Specify O.D., I.D., and height (wall not less than .062", height not less than .040" or more than twice wall width). METEX will check its Die List to see if tooling exists that is close to the specified O.D. and I.D. If so, existing tooling will be used.

METEX Shield VU

Product Summary For Quick Reference ME-70

Name	Shield Vu
Function	EMI Shielded see-through window
Forms	Rectangular or round panels
Construction	Open mesh laminated between clear acrylic with EMI gasketed frame
Maximum Size	48″ square or diameter
EMI Rating	14kHz(H) 30dB; 18MHz(E) 90dB; 1.0GHz(P) 55dB

AVAILABLE FORMS

Shield Vu panels have an open mesh EMI shield laminated between two panels of glass which are in turn mounted in a suitable frame.

EMI Shielding: The standard knitted wire mesh shielding is either .0045 diameter Monel with 10 to 13 openings per inch and 80% viewing area, or .002 diameter Monel with 20 to 24 openings per inch and 85% viewing area. Other wire materials and mesh openings are also offered to allow maximum choice of shielding vs. viewing area.

"Glass": Standard construction is two layers of .062″ clear acrylic. Sizes as thin as two layers of .032″ thick and as thick as two layers of .125″ are available. Acrylic can also be Polarized, colored, or treated for low reflectivity. The space between the two panels can be filled with a clear laminating material (called "fully laminated") to reduce the number of interfaces and to allow changes in environmental pressure. Only fully laminated panels should be used in applications subject to rapid changes in environmental pressure.

Framing*: Two standard framing designs are offered:

- **Polastrip™:** This combines an EMI and pressure seal in one easy to install frame.
- **Aluminum:** This welded frame offers a more rigid mount and can also be used as an attractive escutcheon.

  Shield Vu panels are also supplied without frames for maximum design versatility. Some such panels are included in figure 1.
- **Other:** Shield Vu panels can also be mounted in round frames or supplied mounted in customer-specified bezels.

* U.S. Patents 2,674,644; 3,126,440 and others pending.

DESIGN STANDARDS

Polastrip Frame: Figure 2 and table 1 show the standard design for Polastrip mounting. Table 2 (also referring to figure 2) tabulates some alternate designs that are readily available. Figure 3 gives drawing standards for rectangular Shield Vu panels with other easily supplied Polastrip frames. These same cross sections can also be supplied in round panels.

Aluminum Frame: Figure 4 and table 3 show available aluminum frame cross sections. The standard, style 1144, is indicated in bold face type. Figure 4 also shows drawing standards for complete frames.

Other Possibilities: Shield Vu panels are also available without frames (figure 1) some as small as .75 x .75 and .06 thick. Round Shield Vu panels are easily supplied. They can also be mounted in customer designed bezels.

		% By Weight
Steel Wire	SAE 1010	57%
Copper Cladding	ASTM D-227	40%
Tin Plate	ASTM B-33	3%
	MIL-W-3861	

HOW TO ORDER

Standard Panels

Polastrip Framing: Where possible use one of the standard styles in table 1 and specify by style number. If one of the alternate designs is more desirable, select dimensions A, B, C, and D from table 2 and supply drawing based on figure 2 and 3. Also specify if panel is to be fully laminated.

Aluminum Framing: Where possible use style 1144, the standard design; otherwise specify an alternate by style number. Supply drawings based on figure 4. Also specify if panel is to be fully laminated.

Special Panels: Since special variations of Shield Vu panels are often easy to supply without increased cost or delivery, we suggest you consult Metex application engineers or local representatives for the least expensive way to achieve the function you require.

METEX
Shield Cell™ Omni Cell™

Product Summary For Quick Reference **ME-71**

Name	Shield Cell and Omni Cell
Function	EMI Shielded Ventilating Panel
Construction	Metal Honeycomb in EMI gasketed frame
EMI Rating	⅛″ Cell Aluminum 14kHz(H) 45dB; ⅛″ Omni Cell 50dB; ¼″ Cell Steel 55dB; ALL PANELS 18MHz(E) >102dB; ⅛″ Cell Aluminum 10GHz(P) 50dB; ⅛″ Cell Omni Cell 70dB; ¼″ Cell Steel 75db

AVAILABLE FORMS

Honeycomb Shielding

Aluminum: The standard structure is ⅛″ cell, ½″ thick, electrically permeated, epoxy bonded honeycomb. Other sizes available are 3/16″ cell size ¾″ thick and ¼″ cell size 1″ thick.

Omni Cell™: This is a Metex exclusive; two ⅛″ cells, ¼″ thick aluminum honeycombs mounted together for total ½″ thickness and with foil directions perpendicular to eliminate non-symmetrical shielding effects.

Steel: Standard steel honeycomb is ¼″ cell, 1″ thick. Other sizes available and ⅛″ cell, ½″ thick and 3/16″ cell, ¾″ thick.

Brass: Brass honeycomb is available in 3/16″ cell and ¾″ and 1″ thick.

FRAMING

Aluminum: For aluminum honeycomb and Omni Cell four standard aluminum extrusion frames are available (see figure 2).

Brass and Steel: A wide variety of welded or brazed frames are available. These are similar to the framing shown for aluminum in figure 2.

Round Panels: All honeycomb panels can also be mounted in circular frames, (see figure 4).

EMI Gasketing: All shield cell panels are normally supplied with installed EMI gaskets.

HOW TO ORDER

First, choose honeycomb material:

Omni Cell: This is usually the best general purpose honeycomb because it provides significantly more shielding than ordinary aluminum honeycomb, and is only slightly more expensive. Steel and brass honeycomb are 4 to 6 times as heavy, cost 3 to 4 times as much and only provide 5 to 10 dB more shielding.

Aluminum: Because Omni Cell provides significant increase in shielding at a slight increase in cost, ordinary aluminum honeycomb panels should be used only when shielding is not critical.

Brass and Steel: Brass or steel honeycomb should be used only when maximum shielding is required to low frequency magnetic fields. Compared to Omni Cell, weight will be 4 to 6 times greater, cost will be 3 to 4 times more.

SPECIFICATIONS

Aluminum and Omni Cell

Honeycomb-Aluminum	MIL-C-7438
Frame-Aluminum	QQ-A-274, Alloy 6063-T42 (finishes on bot — Iridite per MIL-C-5541)
EMI Gasket	Monel per QQ-N-281-B Sponge neoprene — MIL-R-6130B Type I Grade A, condition medium.
Captive Nuts	Aluminum, Type 6053-T-4, QQ-A-696
Steel Honeycomb and Frame	AISI 1010; Cadmium Plate per QQ-P-416 Chromate finish
Brass Honeycomb and Frame	QQ-B-613; Dip Soldered per ASTM-B-32-46T Cadmium Plate per QQ-P-416

HOW TO ORDER (Cont'd)

FRAMING

Omni Cell or Aluminum Honeycomb: Frame design II should be used whenever possible because it is inexpensive, requires the least space and has installed fasteners. Standard parts are listed in table 1; dimensions refer to figure 3. Order by part number. For sizes not listed, supply drawing based on figure 3.

If frame design I, III, or IV are more suitable, then supply drawing based on the cross-sections shown in figure 2 and the dimensioning pattern shown in figure 3.

Round panels are usually mounted between two spun "L" sections that form a "C" channel as shown in figure 4. Flange width is .375 minimum; .500 preferred.

For Steel and Brass Honeycomb: Frame designs similar to the aluminum cross-sections shown in figure 2 are possible. Since extrusions cannot be used and frames must be welded or brazed, design details will vary with exact construction. Pick a preferred frame design, and then call METEX or local representative for assistance in completing your design.

Shieldscreen and VIP Filters

Product Summary For Quick Reference ME-72

Name	Shieldscreen Filters, VIP Filters
Function	Air Filter and EMI Shield
Forms	All metal rectangular panels with EMI gaskets
Construction	Aluminum oil wettable filter media in aluminum frames
EMI Rating	14kHz(H) 55dB; 18MHz(E) >102dB; 1.0GHz(P) 55dB

AVAILABLE FORMS FIGURE 1

FIGURE 2

Shield Screen: All shield screen filters have a .50" thick filter medium which is mounted in an aluminum frame (figure 1). Four frame designs are standard. Panels are rectangular and include an EMI gasket.

The medium can be "Wet" or "Dry" (with or without oil coating for more dust retention).

VIP Filters: All VIP filters (figure 2), are coated with an oil for "Viscous ImPingement" of the dust and thus retain it better. Media and frames are aluminum, panels are rectangular and include some form of EMI gasketing.

FIGURE 3

SPECIFICATIONS

Frames	Aluminum, Alloy 6063-T-42, per QQ-A-200/9
Filter Media	Aluminum, Alloy 5056, per RR-W-365
Grilles	Aluminum, Alloy 3003-H-14, per QQ-A-359
Finish on Frames, Media and Grilles*	Iridite, per MIL-C-5541
EMI Gasket	Monel, QQN-281-A
Sponge Neoprene* (when used)	MIL-R-6130A, Type II, Grade A
Captive Nuts* (when used)	Aluminum, Type 6053-T-4, QQ-A-696 Type 1, Class 3

* Not used on VIP Filters.

HOW TO ORDER

First choose which design, Shield Screen or VIP, suits your needs.

VIP: Requires less space, filters better (has higher dust arrestance) is easier to clean and is generally less expensive.

Shield Screen: Has lower air resistance and higher dust capacity.
Shielding effectiveness of both is approximately equal.

Order VIP by choosing one of the two frame designs in figure 3 and supply drawings based on dimensioning pattern in figure 5. Do not locate holes in corners.

Order Shield Screen by choosing one of the four frame designs in figure 4 and supply drawing based on dimensioning patterns in figure 5. Do not locate holes in corners. Table 1 lists standard Shield Screen panels using frame design II. Order these by part number for quick delivery.

Many other design variations are possible, most at little or no extra cost. Please consult METEX or local representative for details.

TABLE 1

METEX
ZIP-EX-2

Product Summary For Quick Reference **ME-73**

Name	ZIP-EX-2
Function	Zip-on, Zip-off cable shield
Forms	Flat material wraps around cable 1″ to 6″ diameter
Construction	Flexible knit wire shielding with protective vinyl cover, metal slide fastener teeth attached directly to shielding mesh
EMI Rating	14kHz(H) 52dB; 18MHz(E) 75dB; 1.0GHz(P) 55dB

AVAILABLE FORMS

ZIP-EX-2: The bulk material is available in a nominal I.D. ranging from 1″ to 6″ (table 1).

Transition Components: Figure 2 shows the three standard transition components. The "Y" and the reducer are made from ZIP-EX-2. The split coupler is solid metal and is used to join two lengths of ZIP-EX-2.

Terminations: METEX also supplies hardware for terminating ZIP-EX-2. A split termination can be added **after** cable has been laid in place. See figure 2.

Slide Fastener Kit: A kit containing all the hardware and special tool required to terminate the slide fastener is also available.

TABLE 1

Sizes	Contained Diameter	Finished Ends	Bulk Length (1)
*1	0-¾	14-1114-0400	14-1104-0400
*1½	½-1¼	14-1114-0600	14-1104-0600
*2	1-1¾	14-1114-0800	14-1104-0800
2½	1½-2¼	14-1114-1000	14-1104-1000
3	2-2¾	14-1114-1200	14-1104-1200
3½	2½-3¼	14-1114-1400	14-1104-1400
4	3-3¾	14-1114-1600	14-1104-1600
5	3½-4¾	14-1114-2000	14-1104-2000
6	4½-5¾	14-1114-2400	14-1104-2400

* These are always in stock.
(1) Slide fastener termination not included. See slide fastener Termination Kit on Page

HOW TO ORDER TRANSITIONS

Pick the part number for the "Y", "T" or reducer by dimension A from table 2. Indicate B dimension by inserting the numbers in the dashes (see Dim. B column, table 3).

Also order a split coupler of proper diameter for each leg.

Example: A "Y" transition with a 5″ main leg and two 3″ legs is part number 14-5115-2012. Also order 2 split couplers part number 15-6012-0005 and 1 split coupler part number 15-6020-0005.

SPECIFICATIONS

Shielding Material ..... 4 layers, 2 stranded .0045 diameter Ferrex™ knitted wire mesh

		% By Weight
Steel Wire	SAE 1010	57%
Copper Cladding	ASTM B-227	40%
Tin Plate	ASTM B-33 MIL-W-3861	3%

Outer Jacket	.020 Vinyl (−40°F to 120°F)
Slide Fastener	Brass teeth crimped directly to mesh shielding material
Split Couplers	SAE 1010 Tin Plated
Termination	SAE 1010 Tin Plated

EMI Gasket

Neoprene Sponge ..... MIL-R-6130B, Type II, Grade A, Condition Medium (−30°F to 150°F)

Ferrex (Tin plated, copper clad steel)

		% By Weight
Steel Wire	SAE 1010	57%
Copper Cladding	ASTM B-227	40%
Tin Plate	ASTM B-33 MIL-W-3861	3%

HOW TO ORDER

Straight Lengths: Table 1 shows standard ZIP-EX-2 sizes. The dimension shown under "size" refers to the nominal I.D. of ZIP-EX-2. The range of contained diameter (including cable ties and other protrusions) is also shown. ZIP-EX-2 does **not** need to be tight on the wire bundle so the contained cable size is not critical.

When exact length required is known, order ZIP-EX-2 with finished ends (figure 1). Metex will finish the ends of the mesh shielding and provide factory installed slide fastener terminations. Normally, maximum length is 40 ft.; longer lengths on special order. Pick part number from column headed "finished ends" and specify length.

When required length is not known, order bulk ZIP-EX-2 and order the slide fastener termination kit shown below. You can then custom make your own ZIP-EX-2 to required length. Pick part number from column headed "Bulk Lengths." Supplied in random lengths, minimum 10 ft., maximum 40 ft.

Split Couplers: Order by part number from table 2. Coupler diameter should be same as nominal ZIP-EX-2 diameter.

Transitions: Pick the part number for the "Y" or reducer by dimension A from table 2. Indicate B dimension by inserting the numbers from table 3 in place of the XX.

Also order a split coupler of proper diameter for each leg.

Bulk Head Terminations: Order by part number from table 4. Terminations should be same as nominal ZIP-EX-2 diameter.

STANDARD ZIP-EX-2 TRANSITION COMPONENTS

FIGURE 3

Split couplers are used to make splices between lengths of ZIP-EX-2 or between transition components and ZIP-EX-2. The loose half of the split coupler is placed in position, the two slide fasteners pulled closed. The splice is completed by securing the ends with standard cable tie-wraps.

TABLE 2

ZIP-EX-2 SLIDE FASTENER TERMINATION KIT

The ZIP-EX-2 Slide Fastener Termination Kit contains enough hardware items and special tools required to finish both ends of 15 lengths (30 closed slide fastener ends) of standard ZIP-EX-2. With this kit you can make bulk ZIP-EX-2 cable shielding to your specific needs. Complete instructions on how to make slide fastener terminations are included. Complete kit, including special tool is part number 15-4000-0001. To replace hardware items order part number 15-4000-0002. It contains enough hardware to finish another 30 lengths, but does not include the special tool.

Magnetic Shield Division has the total magnetic shielding capability to assi you in solving any shielding problem. 80% of current shield designs orig nated with MSD and this design and engineering experience is available t you for research, planning and fabrication.

Research through Production for all your magnetic shielding needs

The Six MSD's

1 FABRICATION

MSD's Netic and Co-Netic Magnetic Shields can be fabricated in any size, shape and quantity, from a miniature tube to a shielded room.

2 SHEET STOCK

For fabrication in your plant or ours. Low cost shielding solutions are provide by fully hydrogen annealed Perfection Annealed stock which normally requires no further heat treatment.

3 FOIL

MSD Netic and Co-Netic Foils are ideal for prototype evaluation and production applications. Available in both plain and adhesive backing, they can be easily shaped in minutes to fit your needs.

4 TAPE PRESERVER CONTAINERS

Used world-wide to protect against loss of valuable tape data. Round and rectangular portable units include the new, smartly designed "Executive." Stacked, sectionalized units for permanent storage are also available.

5 TECHNICA ASSISTANC

The concentration of d sign experience and eng neering knowledge tha has provided over 80% c the magnetic shield de signs now in use is your to assist you in solving a engineering, R & D or pro duction problem. Phon 312, 766-7800.

6 FAST, CONVENIENT DELIVERY is the SIXTH MSD. Some items from stock. Fabricated items 3-4 weeks.

Thermotech Industries

"Where new ideas take shape in plastics"

Thermotech Industry's new industrial complex, with its over 125,000 square feet of space, will house Thermotech's growing executive offices, purchasing and accounting departments, research and development facilities, and corporate administrative offices. Located on a 10 acre tract, the industrial park provides for unlimited future growth.

Thermotech Industries - - divisions and subsidiaries.

BOOKER & WALLESTAD DIVISION, 1324 S. 5th St., Hopkins, Minn. 55343.

The Booker & Wallestad Division specializes in custom-molding of Fluorocarbon and other high temperature thermoplastic materials in short, medium and long runs.

COSOM CORPORATION (SUBSIDIARY), 6030 Wayzata Blvd., Minneapolis, Minn.

Cosom Corporation manufactures and markets lead-up sports training equipment for schools, marine accessories and fishing equipment.

Cosom also specializes in molding Fiberglass reinforced plastic. Cosom offers hand lay-up, spray-up, matched die molding, premix molding, mandrel wrapping, centrifugal casting, potting and encapsulation.

FLORIDA DIVISION, 3200 Tyrone Blvd., St. Petersburg, Fla.

The Florida Division of Thermotech Industries is a fully integrated division having its own tool and mold making facilities. Thermotech Florida specializes in injection, compression and transfer molding of precision plastic parts.

RODGERS PLASTICS EQUIPMENT, INC., 7401 Walker Street, St. Louis Park, Minn.

Rodgers subsidiary specializes in the manufacture of screw-transfer, transfer, compression, and metal working and drawing presses.

Rodgers also makes a complete line of object printers designed for high speed printing of containers and a line of heat sealing machinery.

THERMOTECH PLASTICS DIVISION, 1302 South 5th Street, Hopkins, Minn.

Thermotech Plastic specializes in precision molding of Phenalic, Diallyl, Phthalate and other custom molding Thermoset plastic parts.

Extremely close tolerance work, molding of inserts into parts and molding to government specifications are key specialties of Thermotech Plastics.

WILCOX PRODUCTS COMPANY (SUBSIDIARY).

Wilcox Products specializes in injection molding of Thermoplastic parts up to 25 ounce capacity. Wilcox provides maximum adaptability and service.

Customer design request carefully evaluated before recommendations and quotations are made. Design department available to assist customer in developing a part to fit needs. Wilcox utilizes special properties to meet special requirements — heat resistance, impact strength, low moisture absorption.

COIL FORMS AND COMPONENTS, INC., 1202 S. 5th St., Hopkins, Minn.

Coil Forms and Components specializes in precision intricate injection molding of Coil Forms in Thermoplastic, Thermosetting and Fluorocarbon materials.

Fast quality production is assured with Thermotech's custom designed machines which are automated to serve you on an around-the-clock basis.

Coil Forms now has a stock line of over 600 coil forms which are sold primarily to electrical and electronic companies.

RAINBOW PLASTICS PRODUCTS, INC., 6012 Wayzata Blvd., Minneapolis, Minn.

Rainbow Plastics specializes in precision injection molding of Thermoplastic parts. Presses will accommodate up to 64 ounce capacity. Presses available for long and short runs.

Tokin is either the world's first or second largest maker of ferromagnetic pot cores.

Tokin couldn't care less.

It's not making more pot cores than anybody that's important to us—it is making them **better** than anybody else that matters.

This is the way we feel about each of our products, from metal magnetic and ferrite cores right on up to memory systems. You could say that the history of magnetic material manufacture in Japan is the history of Tokin—a good reason to want to keep our reputation as Japan's largest and most advanced magnetic material manufacturer.

Let us send you products brochure: Tokin, suppliers of quality materials to the electronics and communications industries.

Tohoku Metal Industries, Ltd. **Tokin**

Koei Bldg. 13-10, 7-chome, Ginza, Chuo-ku, Tokyo, Japan
Telephone: Tokyo 542-6171 Cable Address: TOHOKUMETAL TOKYO

Main Products: Ferrite Cores, Memory Cores, Memory Matrices, Ferrite Magnetostrictive Vibrators, Pulse Transformers, Permanent Magnets (Cast, Ferrite), Tape Wound Cores, Bobbin Cores, Magnetic Laminations, Fe-Co Alloys, Sendust Cores

PLANETARY DRIVES

5:1 7:1 10:1 15:1 RATIO (OTHERS AVAILABLE)

VEMALINE

MODEL 4020

HOW TO ORDER

4020-□-□ SERIES 5:1 RATIO
4025-□-□ SERIES 15:1 RATIO
4035-□-□ SERIES 10:1 RATIO

EXAMPLE

4020-1-□ With standard knob & dial.
4020-2- No knob or dial.
4020-3- With standard fast adjusting knob (5:1 only).
4020-4-□ With dial, but not knob.

Note: For Fast Slewing Feature Prefix Part No. with "FS" or "FL"

DIALS

Add to above part numbers the suffix desired for scale. Dials available 1-1/4", 2-3/4" or 4".

A – Blank
B – Calibrated CCW 0–100, –180°
C – Calibrated CW 0–100, –180°
D – Calibrated CCW 0–360, –360°
E – Calibrated CW 0–360, –360°
F – Calibrated CCW 0–100, –360°
G – Calibrated CW 0–100, –360°

NOTE: CCW indicates counter clock wise reading on dial. Dial rotates same direction as knob.

4020 - 1 - B - 1-3/4"

EXAMPLE:

10:1 Std. Knob CCW 0-100 -180° Dial Size

MEETS ALL APPLICABLE MILITARY SPECIFICATIONS

WITH DIAL LOCK 4037
& SYNCHRO ATTACHMENT

DIAL POINTERS AND DIAL LOCKS AVAILABLE

MODEL 5020

ULTRA SMOOTH PRECISION BALL DRIVEN PLANETARY DIAL

5020 WITH FAST SLEWING KNOB

FOR INDICATOR OR ROTARY COMPONENTS, TUNING COILS, POTENTIOMETERS, RESOLVERS, SYNCHROS, etc

- ZERO BACKLASH—(DIAL TO OUTPUT SHAFT.
- INITIAL OUTPUT TORQUE 15 IN. OZ. HIGHER TORQUES AVAILABLE.
- AVAILABLE FOR SYNCHRO, OR OTHER SERVO COMPONENTS.
- CAN BE CUSTOM MODIFIED.
- SMOOTH AND ACCURATE DRIVE ACTION.
- CORROSION RESISTANT.
- FOR MILITARY AND COMMERCIAL ELECTRONIC EQUIPMENT.
- HOUSING MADE OF ANODIZED ALUMINUM.
- STAINLESS STEEL SHAFT.
- VARIOUS STOCK DIALS AVAILABLE. AVAILABLE WITH STOPS & DIAL LOCKS.

5020-□-□ SERIES 5:1 RATIO
5025-□-□ SERIES 15:1 RATIO
5035-□-□ SERIES 10:1 RATIO

Comes only with knob & 1-3/4" Dia. Dial (A-G)
Note: Fast Approach feature in Knob Prefix Part No. F

FL4020-□

FAST APPROACH SLEWING DIAL AVAILABLE

Contact us for additional information and availability.

MANY OTHER PLANETARY DRIVES AVAILABLE. WRITE FOR CATALOG.

4042

For closed circuit TV lens adjustment, Potentiometer & Coil fine tuning. Output torque from 15 IN. OZ. to 60 IN. OZ. Standard ratio 5:1 (available 10:1, 15:1 on request).

TAKES STANDARD KNOB SERIES 3027 and 1073.

4032 5:1

Only 1" Dia. Housing for use in confined areas. Standard ratio 5:1 (available 10:1, 15:1 on order.) Also available with 1/4" (Part #4033) male output shaft instead of standard female collar.

S4020 5:1

Similar to 4020 except with 1/4" male output shaft instead of standard female collar.

Standard ratio 5:1 (available 10:1, 15:1 on request).

4520 5:1

Similar to 4020 except for synchro mounting, comes complete with mounting clamps.

HOW TO ORDER

45□□-8-□-□-□
45□□-10-□-□-□
45□□-11-□-□-□

See ordering info. for 4020 for ratio desired. synchro avail Knob Dial Mark Dial Size

DIAL & KNOB ASSEMBLY ONLY AVAILABLE.

DACO Self-Reactivating Desiccators [Dehumidifiers] for head-up displays, navigational systems and other airborne optical equipment.

Provide clean, moisture-free air

Moisture condensing as a result of changes in temperature and air pressure during flight causes optical instruments to fog and electrical connections to short. DACO Desiccators trap moisture and thoroughly dry the air before it enters the instrument. A special drying cell reduces the moisture content of saturated air to such a small amount that the dew point falls as low as –70°F. Condensation within the instrument is prevented even under such extreme conditions as those in the Arctic regions or at 80,000 feet altitude. In addition, DACO Desiccators prevent dust from entering the system, blocking solid particles as small as 10 microns.

Automatic desiccant regeneration for long continuous service

DACO Desiccators continue to remove moisture from the air, without replacement of the desiccant, long after the desiccant in static desiccators would become saturated and have to be replaced. The exclusive DACO design automatically purges and regenerates the desiccant during flight, making it possible to use these desiccators for several years without servicing.

Reliable, verified performance

DACO Self-Reactivating Desiccators are among the most reliable components on an aircraft. An entirely new departure from previous types of desiccators, they have been designed specifically for use with airborne instrumentation, and are produced under careful control in facilities designed especially for this purpose. The performance of every DACO Desiccator under its specified application conditions is verified by testing before shipment.

Small Size

Designed to fit into tight locations, DACO Desiccators have a maximum diameter of 1.47 inches (exclusive of the mounting flange). Their length ranges from 4 to 7.63 inches, depending upon the air handling capacity.

Wide choice of models

Models are supplied to condition 0.05 to 1.5 cubic feet of air (net cavity volume). Each model is available as a 115-volt AC/DC or a 28-volt AC/DC unit. A variety of mounting flanges and a choice of standard port or port for use with air hose, are also provided.

For additional details, model specifications, dimension drawings and ordering information, ask for DACO Bulletin 500.

DACO™

COOLING UNITS
HEAT EXCHANGE - REFRIGERATING

Electro IMPULSE, INC.

CU-10K

CU SERIES

at exchange cooling units are useful whenever it is de- able to prevent runaway heat conditions. Heat is absorbed a circulating coolant liquid, then exhausted into the am- ent by forced air passing through a radiator.

se this series when coolant temperatures can be allowed to se above ambient.

Model	Capacity Watts	Coolant Flow GPM (0-Back Pressure)	Input Power Frequency	Amps	Suitable Liquids*	Back Pressure P.S.I.
CU-500	500	.3	110v - 60 Hz 24v - DC	6	O	15
CU-1500	1500	.5	24v - DC		O	40

CU-100K	100000	20	220v - 60 Hz	15	O	20

*Suitable Liquids: Water — W. Oil — O. Ethylene Glycol with inhibitors — ETH.
Optional Equipment Available: Flow Switch, Thermometers, Thermostat, Flowmeter, Heater and Water De-ionizer.

RU SERIES

RU-75

Models from this series are required when coolant temperatures must be below ambient. Using refrigeration, they can provide temperatures to 0 degrees C and below, while removing up to 6800 watts of heat.

These units are ideal for remote applications. Coolant temperatures are low, flow rate is steady, and the final heat sink can be in a location which will not cause overloading of air-conditioning equipment.

Special options can provide temperature control of ±1 degree C, while combinations of refrigeration and heating can hold temperatures at any point above ambient.

Model	Capacity Watts	Coolant Flow GPM (O-Back Pressure)	Max. Back Pressure P.S.I.	Operating Power 60 cps	HP
RU-12.5	212.5	1	60	115	.5
RU-25	425	1	60	115	.5
RU-50	850	1	60	115	.7
RU-75	1,275	1	60	115	1
RU-100	1,700	2	60	115	1
RU-200	3,400	2	60	220	1.3

Optional Equipment Available: Thermometer, Thermostat, Flow Meter, Heater.
In chart above, change model designation to RC for Rack Cooler specifications, and to RUH for Refrigeration-Heating Combination shown at left.

RACK COOLER

This series is designed for air, rather than liquid cooling. A sealed volume of air is cooled by a refrigeration system and continually re-circulated within the enclosure. Cool sensitive rack-mounted electronic equipment, or use duct work and manifolds for extensive cooling of radar or other electronic control consoles and cabinets.

For specifications, see chart above and merely substitute "RC" for "RU" in the Model column.

EVANS air filters

for Electronic Cabinet Application

. . . used on Computers . . . Card Readers . . . Tape Transports . . . Transceivers . . . Power Supply Units . . . both large and small cabinetry. Evans Air filters are permanent. Rigid. Aluminum. Made to withstand the brutal abuse of military field conditions. Frames have mitered corners for smooth, close tolerance fit. Die cut, expanded aluminum grids are criss crossed and precision fitted into each filter. Patented Brillo Lock design gives more air delivery with positive cleaning results.

Tolerance:	± 1/32″
Velocity:	200 to 900 FPM
Efficiency:	75% AFI Test
Finishes:	Available in chemical film finish to meet requirements of MIL-C-5541 . . . MIL-F-14072 . . . MIL-A-8625
Sizes:	Filter of 1/2″ or 3/4″ dimension. Made to a maximum area 400 sq. inches . . . with maximum length 25″ on one side without special bracing. For complete information write or call.

LOW RESISTANCE FILTER
Special serts permit fastening solidly to blower unit. Made for air drop equipment.

LOUVERED FILTERS
For outside application. Louvers protect filter media from water, ice, snow.

HEAVY DUTY UNIT
For rugged military use. Extra rigid frame made from .063 aluminum.

PACKAGED RACK BLOWER

Pressurizes and cools. Removes air pollution. Over 100 models, up to 1000 CFM. Commercial. Mil-Spec. EMI Shielded.

PACKAGED FAN (REVERSIBLE)

Low cost. Minimum space. Shallow depth. Pressurizes or exhausts. Four models, to 1200 CFM. Commercial. Mil-Spec. EMI Shielded.

HEAT EXCHANGER

Maintains cabinet at 80°F max. with 1 KW heat dissipation. Air recirculates in rack and is cooled by exchanger in blower case.

HEATER-COOLER

For field installations, unheated military huts, unattended control stations. Maintains even 65°F with surrounding air as low as 10°F.

CENTRIFUGAL BLOWER

Single or dual. For spot cooling or pressurizing. 10 to 1000 CFM. Exhaust in any position. Commercial and Mil-Spec.

VENTURI-MOUNTED FAN

Rugged economy. 420 CFM, push or pull. Mounts top, bottom, or side. No vibration. Quiet. Commercial or Mil-Spec.

EMI SHIELDED UNITS

Cuts signal leakage either inward or outward in the airstream. Certified to MIL-I-6181D.

ORIFICE FAN — PANEL FAN

Extra-low-cost cooling. Up to 550 CFM. Strong, quiet, vibration-free. Easy to install. Life lubrication.

SLOT BLOWER

Ideal for densely packed circuitry. Fits 3½" panel slot. Forces narrow air slot (12½" wide) into cabinet. 150 CFM. Quiet.

FILTER-GRILLE PANEL

Self-contained. Easy to install. Provide more exhaust louver area for improved air discharge. Washable filter. Standard or custom sizes.

TEMPERATURE CONTROLLED LOUVER

Solid-state! Fail-safe! Modulates cool air flow between 55-85°F. Automatic!

SOLID-STATE TEMPERATURE CONTROLLER

Cuts audible noise level. Modulates blower speed! Keeps equipment operating between 80-90°F. More reliable than air conditioning—but costs less.

PAMOTOR

DISTINCTLY SUPERIOR FANS & BLOWERS

• ALL-METAL CONSTRUCTION • FAR GREATER RELIABILITY
• LOWER NOISE • IMPROVED SHAPE FACTOR • REDUCED ELECTROMAGNETIC FIELD
• LOWER OPERATING TEMPERATURE • LOWEST COST

SPACE-SAVING *Precision Bearing* MOTOR-BLOWERS

No. 1½

No. 2

No. 2½

A new line of compact Motor-Blowers are now available with air deliveries ranging from 5 to 19 cfm free air output. Designed to fill the requirements where space is a problem and a minimum of 5-year maintenance free performance is imperative. The precision bearing "power-pac" motor with permanent sealed-in lubrication requires no oiling and operates at an extremely low noise level. The unit can be mounted in any position. The low input wattage required is a cost saving factor of particular advantage in multiple installations.

MODEL NUMBER	TYPE	INPUT VOLTAGE	WATTS	DUTY CYCLE	RPM	OUTPUT FREE AIR CFM	DIMENSIONS H x W x D	LIST PRICE

sergeant T.M. FAN

The Sergeant fan joins the famous Muffin and Skipper fans to form a family of three general purpose, commercial flushing fans in a choice of three price ranges. While the Sergeant fan is extremely low in price, it is reliable and ideally suited for cooling electronic equipment. The fan measures 4 1/16" by 2 3/4" in depth.

The Sergeant is available for either direction of airflow. It may be quickly mounted using two mounting holes which fit the industry's standard 4.125" square hole layout. Mounting in any attitude is permissible and there is a choice of mounting directly to the panel wall where the impeller may extend beyond the panel or flush mounting by including a venturi spacer.

This fan is suitable for ambients up to 130°F (55°C) and has a design life of five years at 75°F (25°C) without maintenance. The fan is impedance protected and satisfies U.L. requirements. The sound interference level is a low 43 db at free delivery. The Sergeant draws watts. Electrical connection is made to 12" long 18 gauge leads.

The mounting spiders are formed steel wire, bright zinc plated. The venturi is cold rolled steel, bright zinc plated. The venturi spacer and the impeller are injection molded acetal resin thermoplastic.

For 115 vac, 50-60 Hz. Weight

muffin® fan

The Muffin Fan is the most reliable commercial tubeaxial fan available. The Muffin Fan can be expected, with a 90% survival rate, to operate up to 10 years at room temperature. Installed in equipment, it minimizes component derating, increases the life expectancy of the equipment and assures top performance. Ultra-long-life bearings are precisely aligned for vibration-free operation. Encapsulated motor winding adds years to life of unit. Molded in bus-bar motor leads. Completely integrated design of motor, blades, optional venturi, grille and filter in a performance matched assembly. The Muffin Fan is designed for 115 VAC, 50-60 Hz, 1 Phase applications. Models for 230 VAC are also available. It has UL yellow card component recognition. File No. E-31293.

Sentinel, Muffin, Whisper, and Centaur Fans

AVAILABLE IN 4 VERSIONS

"SKELETON FAN"

Consists of a motor-driven propeller with 4 mounting arms containing molded-in leads. It can be mounted as an air-stirring device among hot components or can be mounted in a round, sharp-edged or bellmouth aperture in the equipment enclosure.

"VENTURI FAN"

An assembly of the "SKELETON FAN" mounted in a 4.68" square molded plastic VENTURI BLOCK only 1.50" thick. May be used in either a round or square opening in an equipment panel. Mounting holes are provided on both upstream and downstream sides to permit the fan to push or pull air. It may also be used with the MOUNTING CLIPS described in this folder.

"GRILLE FAN"

The "GRILLE FAN" results from the addition of the GRILLE and MOUNTING CLIPS to the "VENTURI FAN". The "VENTURI FAN" may be mounted against the inside surface of the equipment enclosure and the grille snapped into place from the outside. The grille is an advanced aerodynamic design which minimizes the accumulation of lint and dust, and keeps the acoustical noise level to the minimum while insuring maximum airflow.

"FILTER FAN"

A complete cooling package consisting of matched fan and filter for maximum efficiency. The FILTER BOX locks in place between the GRILLE FRAME and the "VENTURI FAN" adding less than .75" to over-all depth. This unit completely eliminates guess work and risks involved in unmatched fan/filter assemblies. FILTER BOX, GRILLE and MOUNTING CLIPS are also available as separate accessories for existing "VENTURI FAN" installations.

Accessory Items For Sentinel, Muffin, Whisper and Centaur Fans.

Mounting Clips No. 13996 (Set)
Spiral Grille No. 16238
Filter Assembly No. 15449
Filtercoat No. 18440
Finger Guard No. 20132-2
Plug & Cord Assembly No. 16415

Sentinel® FAN

The Sentinel Fan has retained the high air performance, versatility, compact design and low noise level of the Muffin Fan but is designed for the more "rugged" application where the ambient temperature is higher. It is also for the customer that requires long, trouble free life without the requirement for maintenance. The Sentinel Fan may be used in a maximum ambient of 100°C and will withstand greater shock and vibration than the Muffin Fan was designed for. To achieve this design criterion the Sentinel Fan incorporates a glass-filled phenolic venturi block, an encapsulated stator, stainless steel ball bearings and an aluminum heat sink which draws heat from the windings to provide a cool running motor. The Sentinel Fan was designed to meet U.L. approval and has been satisfactorily qualified to MIL-E-4970A. The Sentinel Fan is designed for 115 VAC, 50-60 Hz, 1 Phase applications. Models for 230 VAC are also available.

SPARTAN FAN

Delivers 115 CFM free delivery for military applications. Dimensions of 4 11/16" square by 1½" in depth make this fan dimensionally interchangeable with the Muffin Fan. Powered by a multi-slot, double-shielded, ball bearing induction motor which is lubricated for life at a maximum ambient of 100°C. Electrical connection is made by means of 12" leads. The Spartan Fan is designed for 115 VAC, 50-60 Hz, 1 Phase and 400 Hz, 1 Phase and 400 Hz, 3 Phase. The Type "R" version contains round mounting rims for use with standard motor mounting clamps. The air-flow direction may be reversed by turning fan end-for-end. The Venturi Ring, spiders and hub are a single aluminum casting suitable for shock and vibration requirements. The Spartan Fan meets applicable military specifications for ground and shipboard use.

OPTIONAL ACCESSORIES: Terminal Block.
"Synclamps" for Clamping Rim Mtg. Part #24254. (3 Required Per Fan).
"Rever-Synclamps" for Clamping Rim Mtg. Part #14015.(3 Required Per Fan).

WEIGHT 1.0 POUND

MOUNTING HOLE DIMENSIONS 4.125"

Type "R"

Type "S"

CENTAUR® FAN

Available in 4 Versions

New aerodynamic principles by Rotron permit the new Centaur to achieve greater aerodynamic efficiencies than ever before from axial flow fans — and with low acoustical disturbance and compact size.

The Centaur with its computer designed five-bladed impeller molded of high impact polycarbonate is precisely matched to a powerful shaded pole motor — available with either oil-impregnated sleeve bearings or precision ball bearings lubricated for life. The recommended operating ambient temperature is −40°C to +55°C with sleeve bearings, and −40°C to +72°C with ball bearings. The motor is mounted to a spider of die cast aluminum which is in turn assembled to a venturi of high temperature resistant black phenolic.

The Centaur will deliver 115 cfm of air, free delivery operating at 115 volts, 60 Hz, or 100 cfm free delivery at 230 volts, 50 Hz making it possible for the design engineer to select a fan to deliver the same cfm on European power sources as Muffin fans or Sentinel fans at 60 Hz power used in the U.S.A.

The Centaur is designed to be physically interchangeable with the Muffin fan or the Sentinel fan.

Whisper® Fan

MARK I
Available in 4
Versions

Breathing 55 cubic feet of cool air over, under and around every heat-generating component, the Whisper Fan improves performance of hi-fi equipment, radio-TV receivers and O.E.M. equipments by minimizing drift due to temperature change within the enclosure. So quiet you have to feel the breeze to know it's going. Only 18 db SIL. Also supplied as Whisper Fan Kit complete with special mounting, hardware, plug and cord for electrical connections and detailed instructions. Whisper Fan is designed for 115 VAC only, 50-60 Hz, 1 Phase.

WEIGHT 1.0 POUND

Mounting hole dimensions 4.125"

Skipper® FAN

The Skipper Fan signals the best in really economical cooling for computers, office copying equipment, transmitters — all commercial applications requiring 100 cfm of cool air.

It incorporates high quality, precision design and the LOWEST COST. And that's not all. It is designed to SAVE in installation expense — requiring no mounting nuts or bolts — no bolt holes to drill.

Consider these features:

- Requires no mounting nuts or bolts.
- 100 cfm.
- Quiet—just 38 db SIL.
- Thin—only $1\frac{13}{16}$".
- Small diameter $5\frac{3}{16}$".
- Lightweight—14 oz.
- Reversible air direction (using optional plate part no. 19561-2).
- Designed to operate in temperatures up to 140°F (60°C).
- Designed to meet UL specifications.
- Complete accessories.

WEIGHT 14 OUNCES

SPRITE® FAN

The Sprite fan has been designed especially for commercial cooling applications in low-profile electronic equipment, where size and reliable LOW COST performance are the important requirements.

It is only 3⅛" square, still, this rugged little fan with its nine-bladed propeller delivers 33 cfm — tailored to produce high pressure at the ranges approaching free delivery. (See Curve)

WEIGHT 14 OUNCES

Review these important features:

- Small—only 3⅛" square.
- Peppy—delivers 33 cfm.
- Reversible air flow—Simply turn fan end-for-end.
- Impedance protected.
- Designed to meet UL requirements.
- Designed to operate in temperature up to 140°F (60°C).
- Quiet—only 35 db SIL.
- Long life—up to five years.

FEATHER® FAN

For Further Information Request Catalog Sheet E-3001

The Feather Fan delivers 270 CFM for flushing computer consoles, power supplies, heat exchangers and electronic control equipment that can spare little room for a cooling device. The fan's depth dimension of only 2¹⁵⁄₃₂" x 7" diameter imposes little space displacement on the system to be cooled. The Feather Fan is constructed of high-impact polycarbonate plastic which is resistant to extreme temperatures and boasts outstanding dimensional stability. The fan is powered by multi-slot induction motor that incorporates prelubricated stainless steel ball bearings for an ambient temperature range of −55°C to +65°C. 115 VAC, 50-60 Hz, 1 phase. A capacitor is provided which is mounted on the fan venturi. The electrical connection is made to tinned brass terminals and a mating plug and cord is available. The fan is provided with clamping rims for easy mounting and the airflow is reversible by turning the fan end-for- end. A matched filter box #17785 which is permanent, nonloading and washable is optional as are fan guards.

WEIGHT 1.5 POUNDS

OPTIONAL ACCESSORIES:
Rim Guard #14559.
Panel Guard #14651.
Plug & Cord #16398.
Filter Box #17785
Mounting Clamp #16410 (3 required per fan).
Panel Mount Guard Clip #14611 (3 required per guard).
Rotron Filtercoat #18440.

Also available to meet MIL-B-23071/1/. Please Inquire.

SAUCER® FAN

For Further Information Request Catalog Sheet E-3000

The Saucer Fan is ideally suitable for integration into modern electronic packages requiring 270 CFM of cooling air. Its axial length or thickness is strictly limited to the minimum measurement required by a highly efficient propeller, with no further space sacrificed for the driving motor. In other words, **"It is all fan"**. Airflow is reversible by turning the fan end-for-end. Clamping rims at each end of venturi provide easy mounting. Electrical connections are made to a compact terminal block. The Saucer Fan meets applicable military specifications for ground equipment.

A 400 Hz version is also available.

WEIGHT 1.6 POUNDS

TARZAN® FAN

For Further Information Request Catalog Sheet M-8000.

WEIGHT 5 POUNDS

The Tarzan fan brings an entirely new concept of air moving device versatility to the science of electronic cooling — CENTRIFUGAL BLOWER PERFORMANCE IN A COMPACT AXIAL FLOW FAN. This unique Rotron aerodynamic design (patent applied for) develops much greater pressure than comparably sized axial flow fans.

Its straight line performance curve permits the packaging engineer to realize full potential from the Tarzan at any point along the curve with no instability normally found in a curve of an axial flow fan.

When considering a squirrel cage centrifugal blower to deliver 175 cfm at 1/2" water static pressure — CONSIDER A TARZAN FIRST — SAVE SPACE — eliminate discharge diffusers.

More features:

- Long maintenance free life.
- Economically priced.
- Reversible air flow — Simply turn fan end-for-end.
- Ball bearings — lubricated for life.
- 115 VAC, 50/60 Hz.
- 230 VAC, 50/60 Hz.

Optional accessories:

- Plug and Cord #17555.
- Filter Box #20990.
- Finger Guard #21196-2.

Caravel® FAN

For Further Information Request Catalog Sheet E-3050

WEIGHT 5 POUNDS

The Caravel Fan delivers an air volume of 575 CFM while holding a narrow depth dimension of only 3½" x 10" diameter. This high performance and compact design makes it ideal for flushing large racks and cabinets. The fan may be mounted directly to a panel or cabinet wall using the holes located around the circumference of the venturi. Airflow may be reversed by turning the fan end-for-end. The motor is provided with ball bearings for long, quiet life. No maintenance is required. The electrical connection is made to a terminal block and a mating plug and cord is optional. The Caravel is suitable for the most rugged commercial applications where the cabinet temperature does not exceed 140°F. Thermal protection for the motor, designed to meet UL approval, is available on special order.

PROPIMAX® 2

For Further Information Request Catalog Sheet E-2900

WEIGHT 6.5 OUNCES

The PROPIMAX-2 is ideal for 400 Hz airborne and missile applications where high shaft speeds are mandatory to obtain maximum air performance in a minimum of space. Selection from constant speed or high altitude varying speed "Altivar"® motors, which change shaft speed directly with altitude. A 50-60 Hz design is also available. The units are lubricated for a maximum ambient temperature of 125°C and will have a life expectancy of 2000 hours of continuous duty in an ambient atmosphere of 14.7 psia and 72°C. For fan life specifications for motor series 366ZS contact factory. The airflow is reversible by turning venturi ring end-for-end. There are clamping rims at each end of venturi for quick mounting. A single terminal block for all electrical connections. Meets applicable military specifications.

OPTIONAL ACCESSORIES: "Synclamps" for Clamping Rim Mtg. Part #24254. (3 Required Per Fan).
"Rever-Synclamps" for Clamping Rim Mtg. Part #14015. (3 Required Per Fan).

PROPIMAX-3 & 3B

For Further Information Request Catalog Sheet E-2901.

WEIGHT 15.2 OUNCES

The PROPIMAX 3 and 3B will deliver up to 220 CFM free delivery and will work against high air impedance. It is ideal for cooling small airborne systems which must place maximum emphasis on size and weight. This means heavy component density with large heat loads and high air impedance in relation to the envelope dimensions of the system. The PROPIMAX 3 has a two bladed propeller and is powered by a constant speed 400 Hz motor operating at 22,000 RPM. The PROPIMAX 3 will deliver large volumes of air against relatively high static pressures. The PROPIMAX 3B is provided with a four bladed propeller for operation at speeds of 12,000 RPM or less on 400 Hz. The PROPIMAX 3B will deliver large volumes of air against lower static pressure levels. The PROPIMAX 3B offers a choice of a constant speed 11,000 RPM design and high altitude, variable speed "ALTIVAR"® motors which change speed directly with altitude. There is also a 50-60 Hz design available.

The units are lubricated for a maximum ambient temperature of 125°C and will have a life expectancy of 2,000 hours of continuous duty in an ambient atmosphere of 14.7 psia and 72°C. For more stringent duty conditions fan life specifications must be individually defined. Airflow is reversible by turning fan end-for-end. There are clamping rims at each end of the venturi for quick mounting. A single terminal block for all electrical connections. Meets applicable military specifications.

OPTIONAL ACCESSORIES:
"Synclamps" for Clamping Rim Mtg. Part #14015. (3 Required Per Fan).
"Rever-Synclamps" for Clamping Rim Mtg. Part #24254. (3 Required Per Fan).

nanos FAN

The Nanos fills the requirement for an extremely small air moving device. It is only 1" in diameter by 1" long or it may be provided in a 1" cube and delivers up to 7.5 cfm free delivery.

This fan is the smallest and lightest of a family of miniature high frequency fans for tightly packed electronic black boxes. The impeller and correctional vanes are of airfoil construction for maximum aerodynamic efficiency and minimal acoustical noise. Power is provided by an inverted construction, hysteresis motor, utilizing an air lubricated hydrodynamic journal bearing.

The Nanos is designed to withstand 100G shock in any direction. The temperature range is −55°C to +100°C. Under normal continuous running conditions, life expectancy would be in excess of 20,000 hours or more than 500,00 start-stop cycles. The fan may be mounted in any attitude. The airflow is reversible by turning the fan end-for-end.

Electrical connection is made to (3) leads 12" long. Choice may be made between a round configuration with clamping rims of a 1" cube which will mount flush at either end or on the side. For the servo configuration specify Nanos-1 or for the cube unit Nanos-1B or 1-C depending on desired airflow direction. Power requirement is 26 vac, 400 Hz 1ϕ.

VANEAXIAL FANS

Vaneaxial fans are usually employed in high component density assemblies which require high performance under relatively high air impedance and at the same time offer minimum space for the cooling device. Vaneaxial fans in this group offer exceptional reliability under extreme operating conditions. These fans are generally of high frequency (400 Hz) power designs with resulting extremely high motor rpm. This speed provides the excellent pressure building abilities within their small physical size. They can also be supplied with 50-60 Hz motors. Models with Altivar motors are available for high altitude use in aircraft and unmanned high atmosphere vehicles.

AXIMAX® 1

For Further Information Request Catalog Sheet F-3100.

The smallest and lightest of a family of miniature, high frequency fans for use in tightly packaged airborne "black boxes" where size and weight must be held to an absolute minimum, where reliability is critical and where high heat loads must be dissipated with cooling air. The Aximax 1 will answer all of these requirements while overcoming considerable air resistance. It will deliver 17 CFM at 1" w.g. Mounting is by Clamping rims.

The Aximax 1 is available for both pressurized and non-pressurized applications and is built for single-phase or three-phase operations, and meets applicable military specifications.

A 50-60 Hz motor is available.

Weight 4 ounces.

AXIMAX 2

For Further Information Request Catalog Sheet F-3200.

Air delivery of 60 CFM, free delivery, is provided from a fan 2" in diameter by 1.5" axial length. The Aximax 2 is designed for maximum cooling against high static pressures with a minimum space and weight loss. It is available from a choice of constant speed or variable speed motor designs for low or high ambient densities. The Aximax 2 can be supplied with clamping rim mounting and electrical connection to a compact terminal block or as shown in the sketch. It meets applicable military specifications. A 50-60 Hz motor is also available.

Weight: 4.5 ozs.

AXIMAX 3

For Further Information Request Catalog Sheet F-3300.

The Rotron Aximax 3 vaneaxial fan is specifically designed for high frequency cooling applications where high air deliveries against high static pressures are to be obtained in a minimum of space, therefore requiring high shaft speed. For airborne equipment, including missiles, the features of the fan will be found particularly attractive. Selection can be made from constant speed motors or varying speed motors for low ambient densities. Airflow is reversible by turning fan end for end. The Aximax 3 is mounted by clamping rims. It meets most applicable military specifications.

A 50-60 Hz motor is also available.

Weight: 14 ozs.

CENTRIMAX®

Model CXH33A

- Delivers more air with more efficiency than conventional squirrel cage blower.
- Package size substantially smaller than assembled squirrel cage blower.
- Motor completely integrated with impeller design.
- No maintenance — oversize, double shielded, precision ball bearings — lubricated for life.
- Ultimate in reliability — no centrifugal starting switches or relays which are the cause of most single phase motor failures.
- Every unit comes equipped with adjustable blast direction — impeller housing can be rotated 360°.

Model	Volts	Hz	Phase	Watts	Amps.	Cap. Mfd.	CFM
CXH33A2	115	50-60	1	420	3.7	12.0	540
CXH33A3	230	50-60	1	380	1.7	6.0	545
CXH33A33	220	50-60	3	410	1.3	—	530

Model CXH29A

- Can be installed in any attitude and mounted from any one of three mounting surfaces.
- Designed to accept standard, readily available round ducting.
- Blower housing fabricated from flame retardant polyester resin.
- Never rust, never bend.
- Thermal safety cut out feature available as optional.
- Operating temperature from −20°C to 85°C.
- Available in 115 VAC, 60 Hz, single phase; 230 VAC, 50 Hz, single phase; 208-230 VAC, 50-60 Hz, three phase.

Model	Volts	Hz	Phase	Watts	Amps.	Cap. Mfd.	CFM

For Further Information Request Catalog Sheet G-3350.

Model G

For complete details request Rotron catalog sheet G-3340.

TYPES E & F

The Model G blowers are another type of blower incorporating the centraxial impeller. This blower uses the impeller without a scroll type housing. It consists of a mounting inlet plate holding the motor and the centraxial impeller. It has the unique feature of drawing the air in axially and discharging it uniformly radially 360° around the impeller. The Model G blower incorporates great flexibility in installing the blower in tight spaces.

Two basic sizes of the Model G blower are available. The Type E with airflows up to 285 cfm and maximum static pressures at no delivery up to 1¾" and the Type F with airflows up to 500 cfm and maximum static pressure at no delivery up to 2¼". Motors are available for either 115 or 230 volts, single or three phase, and 50/60 or 400 Hz. Applicable military specifications can be met. Protective screens on the inlet and mounting for the Rotron Model 2A Airflow Switch are available as accessories.

CENTRAXIAL BLOWERS

Centraxial blowers, so named for their unique im- ers, are far more efficient than squirrel cage blowers similar capacity or size. The centraxial impeller ctions similarly to a turbine impeller. Therefore, might compare efficiency by comparing a water bine to an old fashioned water wheel. Centraxial wers cost less to buy, cost less to install because of ir built-in versatility and cost less to operate since y require less power to get performance.

They operate in the specific speed range of 9,000 80,000.

NUGGET® BLOWER

The Nugget (Model NTH2) is a new, compact, low cost blower ideally table for spot cooling applications in test instruments, transmitters, TV meras, office machinery, and tape recorders. Its centraxial wheel, a w design concept by Rotron affords greater efficiency than standard uirrel cage wheels — greater volume to pressure characteristics. It is ly $3\frac{19}{32}$" x $4\frac{1}{32}$" x $2\frac{3}{32}$". The Nugget delivers 14 CFM. The Nugget in- rporates a specially designed miniature subfractional horsepower in- ction motor that draws only 7 watts. 115 VAC, 50-60 Hz, 1 Phase, 00 RPM. The rugged blower housing is injection molded from poly- rbonate plastic to form a combination of features which will prove lpful and convenient to any packaging engineer. The Nugget is also ailable without housing to be used as an air stirring device (Model TP2). This model requires a space of only $2\frac{1}{2}$" x 2".

PTIONAL ACCESSORIES:

- ug & Cord Assembly, Part No. 17555 or both models)
- m (inlet), Part No. 17469 or Model NTH2 only)
- let Clamp Part No. 17597-1 or Model NTH2 only) se with Rim #17469)
- Outlet Clamp, Part No. 17597-1 (For Model NTH2 only)
- Flange (Outlet) Part No. 17471 (For Model NTH2 only)
- 3 Brass Inserts, Part No. 19803 to be used on Blower Inlet, Model NTH2

WEIGHT 0.6 POUNDS

For Further Information Request Catalog Sheet G-3310.

biscuit™ BLOWER

The Biscuit blower is designed for packaging within the confines of equipment having a vertical profile of no more than $1\frac{3}{4}$". This new blower provides high pressure centrifugal blower performance in a space never before possible. It has a depth dimension of only $1\frac{9}{16}$".

Delivering up to 25 cfm free delivery and with a high static pressure capability, it permits a significant increase in the packaging density of instruments using the latest integrated circuit technology.

The Biscuit blower features the same inverted motor construction and resiliently mounted permanently lubricated sleeve bearing system as Rotron's famous Muffin® fan and, therefore, provides a design life in excess of 10 years at room ambient without maintenance.

Among the commercial applications for which it is designed are computer terminals, core memories, heat exchangers and sinks, power supplies, projector lamps and rack mounted instruments. In the office equipment field, the Biscuit is ideal for the cooling of copying machines, optical character readers and X-Y plotters and recorders.

Encapsulated stator construction integrates the electrical portion of the shaded pole motor into the blower housing to provide a monolithic structure totally impervious to moisture. The Biscuit may be mounted from the back, the inlet or the discharge. Electrical connection is made to a choice of tinned solder terminals or plug and cord #17555 may be specified. Other options include an inlet ring, hose clamp or outlet guard.

The Biscuit is designed for U.L. component recognition and has a low speech interference level of 44 db. It operates on a power source of 115 vac, 50-60 Hz. Also available for 230 vac. Power draw is 16 watts. Specify BT2A-1 for a plain inlet or BT2A-2 for a rim inlet.

ACCESSORIES
Outlet Guard #24540
Hose Clamp #001-048
Plug and Cord #17555

For Further Information Request Catalog Sheet H-3306.

Spiral® BLOWERS

Spiral blowers are revolutionary new motor-blower packages designed to develop unusually high positive or negative air pressure at low to moderate volume of air. Thus, performance achieved without the use of sliding seals or vanes. Contacting surfaces are confined to the precision extra wide ball bearings, lubricated for extremely long life — no maintenance is required.

Life expectancy is enhanced by their low speed motors as well as by the absence of brushes or commutators. The RF noise, characteristic of the universal motors generally used in vacuum cleaner type blowers, is eliminated.

Optional accessories include adjustable trimmer valve, differential pressure gauges for instantaneous trimming to system requirements and a thermal protector.

MINI-SPIRAL

For Further Information Request Catalog Sheet J-6550.

The Mini-Spiral is a high pressure, low flow air moving device specifically designed for gas sampling applications. The unique regenerative energy conversion characteristic of the Spiral® blower has been combined with the highly reliable ball bearing system of the famous Sentinel® fan, offering proven long life and reliability in a compact package. This tiny blower which measures 4 5/32" in diameter by 1 13/16" in depth will create a suction of 3" wg, which could normally be achieved with a centrifugal blower many times its size and power consumption.

The Mini-Spiral may be used in commercial equipment to draw up to 2½ cfm through long lengths of tubing, resistance filter or chemical beds. It may be operated continuously at shut-off (no airflow) when it would provide maximum suction of 3" wg for gas sampling, fume removal, document hold down, tape hold down or the removal of chad.

The blower housing and impeller are a high strength, glass filled, flame retardant phenolic. Bearings are double shielded, single row, radial ball, stainless steel which are lubricated for life. Magnet wire is Nema Class F. Termination consists of two U.L. style 1180 Teflon® leads, 20 AWG, 12" long.

The Mini-Spiral satisfies U.L. requirements and may be operated continuously in an ambient up to 72°C. It has a life expectancy of 50,000 hours at 40°C. A low speech interference level of 45 db renders the Mini-Spiral suitable for application in office equipment. Mounting is easily provided for running screws through two butyl rubber grommets. The weight is only 1.1 lbs.

DUPLEX SPIRAL

For Further Information Request Catalog Sheet J-6610.

The Duplex Spiral offers greater performance characteristics than the Spiral Model SL2 above. By internal ducting of the airflow from two impellers, higher pressures are achieved with Model SL4; Model SL5 extends the airflow range, and Model SL6 provide an economical source of two independent high pressure air streams, which can be utilized at different pressure levels. While the dimensions of all these models are the same, the functions cannot be changed in the field. The Duplex Spiral is designed for use in ambient temperatures up to 55°C, in typical applications as:

- Magnetic tape slack control and capstan motor cooling in one package (Model SL6).
- Document and card handling equipment.
- Paper tape and card reading equipment.
- Power supply for fluid amplifiers.
- Laser head cooling.
- Printed circuit motor cooling.
- Materials handling.
- Waveguide pressurization, or cooling.
- Actuation of machine elements.
- Gas sampling and purification.
- Air bearings for tape and film.
- Microwave cavity cooling.
- For holding photographic film or paper on rollers OR frames.

Remember these features:

- Two independent air sources from one package.
- Two jobs for the price of one.
  OR
- Extended performance — pressures — vacuums to 2 PSIG.
  OR
- Extended performance — airflow delivery up to 94 CFM.
- Oil free air flow — no possible contamination.
- Quiet.
- Low Speed — 3300 RPM.
- Economically priced.
- Continuous duty.
- Available for single or three phase, 50-60 Hz power, 115 or 208/230 VAC.
- Optional accessory — Dust filter.

BELT DRIVEN SPIRAL BLOWER

For complete details, request Rotron catalog sheet J-6620.

MODEL SL2HA

To obtain even higher pressures and airflows than can be obtained with a Model SL2 or Duplex Spiral shown above, Rotron has adopted the Model SL2 to be belt driven from an external motor. This permits the blower speed of the Model SL2 Spiral to be increased for higher air performance. Pressures or vacuums up to 4½ psig can be obtained. Flows at free delivery of 115 cfm can be obtained. The flexibility of different pulley ratios permits the designer to meet altitude and frequency requirements without overdesign.

Motors used with this blower are induction motors with no brushes to wear and operate at 3450 rpm. They are available in all common voltages and frequencies and have permanently lubricated ball bearings. Belts are designed for 10,000 hours life with no maintenance or adjustments.

AIRFLOW INTERLOCK SWITCH

For Further Information Request Catalog Sheet K-6800.

The Rotron Model 2A Airflow Interlock Switch provides insurance against equipment damage due to a loss of the cooling airflow regardless of the reason for the malfunction. The Model 2A Airflow Switch is a velocity actuated switch, not pressure actuated, and senses the loss of airflow because of an obstruction, or air leak up-stream from its location, or due to the failure of the cooling fan. The switch is a single pole double throw type and normally open and normally closed contacts are available which may be used to turn off the power to the endangered equipment or actuate alarm systems. Eight different vane sizes are available to size the switch for various air velocities. A convenient determinator kit permits quick selection of the proper air vane for a particular application.

Rotron Model 2A Airflow Switches Will Actuate and De-Actuate in an Airstream of the Following Velocity in Ft./Min. For "Standard" Air (29.9 Inch HG, 70°F).

POWER CONVERSION MODULES

SYSTEM POWER SUPPLY PROBLEMS FOR DTL, TTL, MOS AND OTHER LOGIC DRIVES?
SYSTEM POWER SUPPLY PROBLEMS FOR COOLING DEVICES?

Rotron can solve these independently or combine both requirements in a common supply. Power DC to AC inverters, AC to AC converters, and DC supplies can be designed to meet your specifications. Rotron's approach of combining these requirements results in increased efficiencies, weight and size reduction of the often neglected power supply. Your Packaging Engineer will be grateful for the additional volume allotted to today's dense packages.

Please call upon us to consult in the solution of your power supply problems. As a bonus, free consultation is offered on your cooling applications.

Wide assortment of BATAC and DELTAC (frequency converter) designs available. For further information, contact Rotron Applications Engineering Dept. Woodstock, N.Y. Return to Section #4000 for other BATAC and DELTAC Applications.

ROTRON DC FANS BRUSHLESS DC WITH ROTRON BATAC®

The Batac solid-state DC to AD single-phase inverter gives long, maintenance-free life to air-moving devices that operate on DC power. Single-phase fans mate with the low-voltage square-wave output of the Batac, eliminating the need for a transformer. The Batac/Fan combination offers all the advantages of AC operation—no brush dust or brush changes, arc-free operation, and no commutator to create RFI.

FEATURES

- Rotron reliability and performance from a DC power source
- Efficient—Every design tailored to a specific load
- Compact—Batac sizes range from 1 5/16" x 1 1/8" x 1" to 2 1/2" x 3 1/2" x 4 1/16"
- Available with protection against accidental reversal of input voltage
- Offered with integral RFI suppression network
- For use in ambients between −40°C and +71°C
- Offered with voltage surge protection
- Reasonably priced

Also available for use with the aforementioned fans is a variety of solid state Deltac converters capable of increasing or decreasing output frequency with respect to input, on 115 VAC, single phase supplies.

MB 7100

DESCRIPTION — The Modulair MB 7100 is a most efficient cabinet panel blower incorporating two (2) famous Rotron Centraxial wheels noted for their high pressure building characteristics and driven by two matched ball bearing motors, pre-lubricated for years of maintenance-free life.

The standard MB 7100 normally occupies a panel opening of 7", however, recessed models, Type 175 and Type 275, require only 5¼" panel space and utilize the cabinet space between the bottom cabinet frame and the base of the cabinet, with no loss in airflow.

The air is discharged evenly across the entire width of the Modulair in a turbulent pattern. The noise level is only 65 db (SIL).

WHERE TO USE — In EIA standard rack cabinets where component density is great and there is much resistance to airflow — where pressure building capabilities of the MB 7100 are necessary.

MOTORS

- Two (2) motors are used in MB 7100
- Ball Bearings
- Pre-lubricated
- Life — 5 years
- Thermal Protection standard

MB 8100

DESCRIPTION — Modulair Model MB 8100 normally occupies a panel space of 8¾" and delivers 600 cfm from two Rotron designed Centraxial wheels noted for their high pressure building characteristics and driven by two (2) matched ball bearing motors, pre-lubricated for years of maintenance free operation.

Modulair Model MB 8100, Types 175 and 275 are recessed models requiring only 7" panel space and utilize the space available between the bottom cabinet frame and the base of the cabinet, with no loss in airflow.

The air is discharged evenly across the entire width of the Modulair in a turbulent pattern to affect every area of the cabinet and eliminate hot spots. The noise level is only 75 db (SIL) at high speed and 70 db (SIL) at low speed.

WHERE TO USE — In EIA standard rack cabinets where component density is great and there is much resistance to airflow — where pressure building capabilities of MB 8100 are necessary.

MOTORS

- Two (2) motors are used in MB 8100
- Ball Bearings
- Pre-lubricated

MB 9100

DESCRIPTION — Modulair MB 9100 series incorporates the performance capabilities of three (3) famous MUFFIN fans and delivers 240 cfm of clean, filtered air from a package only 5¼" high and 3½" deep. Life expectancy of the MUFFIN fan is 10 years.
The Modulair MB 9100 series can also be supplied with Rotron's ball bearing Sentinel and Spartan fans to meet military specifications or with Rotron's new Centaur for a 20% increase in air delivery. Model 9100 is impedance protected. The noise level is only 52 db (SIL).
WHERE TO USE — Modulair MB 9100 should be used in EIA rack cabinets where the component density and resistance to airflow is minimal and where there is relatively free passages for the flow of air.
DUST FILTERS — Modulair model MB 9100 comes equipped with low impedance, washable, 3 ply corrugated screen viscous impingement filter.

MB 9200

DESCRIPTION — Two (2) powerful ball bearing Rotron Feather Fans delivering 400 cfm from a package 8¾" high and only 3½" deep make up the Modulair MB 9200 series.
The Modulair MB 9200 can also be supplied with Rotron's Saucer fan to meet military specifications. Modulair MB 9200 can be supplied with thermal protection. The noise level is only 56 db (SIL).
WHERE TO USE — Modulair MB 9200 should be used in EIA rack cabinets where component density and resistance to airflow is minimal and where there are relatively free passages for the flow of air.
DUST FILTERS — All Modulairs come equipped with low impedance, washable, porous, Scott Foam filters enclosed in a rigid aluminum frame.

MB 5100 TWINPAX

DESCRIPTION — The Modulair MB 5100 Twinpax utilizes the performance capabilities of two (2) Rotron Feather Fans or two (2) Rotron Saucer Fans, as in Modulair MB 9200, to discharge 400 cfm of clean, cool, filtered air.
MB 5100 Twinpax requires only 5¼" panel space, an unusually low profile for a unit with so much performance.
Modulair MB 5100 Twinpax can be supplied with thermal protection. The noise level is only 55 db (SIL).
WHERE TO USE — Modulair MB 5100 Twinpax should be used in EIA rack cabinets where component density and resistance to airflow is minimal and where there are relatively free passages for the flow of air.
DUST FILTERS — Modulair MB 5100 Twinpax is supplied with a large permanent aluminum washable filter.

ADVANTAGES OF ALSIMAG® TECHNICAL CERAMICS

MORE MATERIALS

For many decades American Lava has worked with leading firms to develop special ceramics for their advanced designs. The result is the greatest number of special ceramic compositions available from any source. This wealth of ceramic materials can help in two ways. First, it may give you the exact performance you require. Second, it enables you to select the most economical material that meets your design requirements.

MORE PROCESSES

American Lava offers the broadest processing capabilities in the industry. These include forming ceramics by all modern methods including pressing, extrusion, injection molding, isostatic pressing, plus metallization, plating, chemical milling, machining, grinding, lapping, and hermetic bonding.

Many of these processes were pioneered by American Lava. Examples are (1) the ability to produce certain as-fired ceramics to precision tolerances and (2) the proprietary AlSiBase process for producing thin flat ceramics.

MORE SPECIALIZED ENGINEERING TALENT

American Lava, built on engineering ability, has demonstrated that it is the best source for any problem involving technical ceramics.

GREATER PRECISION

Technical ceramics play an increasingly important part in American industry because they can meet especially demanding requirements. American Lava has the experience, know-how and facilities to produce ceramics to the closest tolerances, and to measure and inspect them by agreed means.

MORE MODERN DESIGNS

Technical leadership at American Lava Corporation is based on working with its customers to give them what they want. This currently involves work on composite substrates, composite packages, buried metal patterns, super-smooth and flat substrates, special temperature compensating dielectrics, ceramic capacitors and new ceramic coatings for metal and low expansion glass.

VOLUME PRODUCTION

American Lava has the resources, know-how and the desire to make commitments required to meet volume requirements of its customers. A long parade of firsts in new manufacturing capabilities have allowed American Lava to keep pace with the ever changing need for technical ceramics in volume.

EXPEDITED PROTOTYPES

Special procedures speed the production of prototypes for your evaluation. A chart giving the characteristics of our most frequently used AlSiMag ceramic compositions will be sent on request. Suggestions are available from our specialized engineering staff.

DOW CORNING

DOW CORNING® SILICONE MATERIALS

SILICONE ENCAPSULATING MATERIALS

Two-part SYLGARD® Resins

Sylgard resins are solventless, pourable, deep section curing silicone materials that provide tough, firm, yet resilient packages for electronic components and circuits. They provide excellent protection against high humidity, heat, cold, thermal shock, moisture and radiation; they are self-extinguishing and completely reversion-resistant.

Circuits embedded in Sylgard resin are easily repaired—the resin is cut away, the repair made, and fresh resin is poured in place. There is no loss in dielectric integrity.

As supplied, these resins flow readily around complex circuitry. If required, they may be thinned to very low viscosity with Sylgard® 1330 thinner.

Sylgard resins cure with the addition of a catalyst, without releasing volatile by-products. There is virtually no shrinkage, even when these materials are cured in deep sections. Curing rate can be heat-accelerated without causing bubbling. No moisture is required for curing, and no post-cure is necessary to prevent depolymerization.

Both clear and opaque types are supplied. For maximum adhesion, a Sylgard® primer is recommended.

Sylgard® 182 and 183 resins are heat curing, offer a selection of pot life and cure times. Typical curing rate is 4 hours at 65 C. Serviceable temperature range is from −65 to 200 C for the clear resin (182); −65 to 250 C for the black (183).

Sylgard® 184 and 185 resins are similar to the above, but cure at room temperature. Typical cure time is 24 hours.

Sylgard® 186 and 187 resins, although similar to the rest of the family, offer extra physical strength and toughness. Their tear strength—100 ppi—is many times greater than the other Sylgard resins, and they provide more than three times the elongation. They are used where durability and maximum protection against mechanical damage are required.

Sylgard® 188 and 189 resins are specifically designed for use where shock absorption is vital.

One-part SYLGARD Resin

Sylgard® 3150 resin is a one-part, premixed, white, solventless resin that cures at moderate temperature to form a resilient, easily repairable encapsulant for electronic components. It cures without exotherm, even in confined spaces, and retains its physical and electrical stability over a wide frequency range and 100% RH. Its low viscosity (100 poises at 25 C) aids in potting and filling deep, intricately shaped components and assemblies.

Stress-free potting gel

Sylgard® 51 dielectric gel is supplied as a water-white, medium-viscosity liquid that readily surrounds components. With the addition of a catalyst and the application of heat, it cures to form a clear, resilient, jelly-like material that combines outstanding dielectric properties with thermal stability and moisture resistance. Typical electric strength is 800 volts/mil; dissipation factor at 100 Hertz is 0.0005.

No damaging stresses are exerted on delicate parts by this material during cure—after cure it develops virtually no stresses throughout its wide operating temperature span of −65 to 200 C.

Since this material is transparent, potted circuits can be traced visually. Test probes can be inserted through the gel for instrument checking of circuits and components—the gel "heals" itself immediately when the test probes are removed.

DOW CORNING CORPORATION, MIDLAND, MICHIGAN 48640

DOW CORNING

DOW CORNING® SILICONE MATERIALS

SILICONE ENCAPSULATING MATERIALS

DOW CORNING RTV ENCAPSULANTS

Dow Corning's family of two-part room-temperature-curing silicone rubber encapsulants offers optimum processing flexibility plus outstanding environmental and electrical protection for many types of equipment. These materials stay rubbery and flexible from −65 to 250 C, and have good dielectric properties over this range. Their excellent resilience helps absorb mechanical shock and vibration, and they protect components against temperature extremes, moisture, dirt, weathering and corrosive atmospheres. Encapsulated circuits are easily repaired by cutting away old material and repouring fresh encapsulant. Package integrity is fully restored.

Production flexibility

Four of the RTV encapsulant bases are designed to be used with any one of three catalysts, in varying proportions, to give working times from less than a minute to more than an hour. Thus a minimum inventory of material is required to meet a variety of applications. When used in 10:1 base-to-catalyst ratio, these materials are well suited to automatic dispensing and mixing equipment. They can be cured at room temperature or under heat, depending on the catalyst used; the room-temperature-vulcanizing types cure in deep sections without exotherm.

Dow Corning® 3110 RTV encapsulant is a white, low-viscosity silicone rubber base.

Dow Corning® 3111 RTV encapsulant is a red version of 3110.

Dow Corning® 3112 RTV encapsulant is a white, medium-viscosity silicone rubber base that cures to a high durometer, high-strength rubber.

Dow Corning® 3116 RTV encapsulant is a white, medium-viscosity silicone rubber base with a low specific gravity.

These three bases can be pigmented for color coding.

Dow Corning® 3120 RTV encapsulant is a red, medium-viscosity silicone rubber base; cures to a high-durometer, high-strength rubber.

The catalysts used with these four bases are all paste-consistency materials containing active organo-metallic compounds. They are designed for easy measuring and for mixing by either automatic or mechanized methods.

Dow Corning® RTV standard (S) catalyst is the most widely used of the three. It permits at least 30 minutes working time, cures well in deep sections.

Dow Corning® RTV fast (F) catalyst is used for high-speed production. It is ideally suited for use with automated mixing and dispensing equipment where mixing is done just prior to dispensing. Working time with 10% of this catalyst is about 2 minutes. Rubbers using this catalyst cure well in deep sections.

Dow Corning® heat-accelerated (H) catalyst is used where long working time is desired but where fast curing is necessary. With this catalyst, thin sections (⅛ inch) of RTV encapsulants are cured in as little as 5 min. at 150 C.

Dow Corning® 1203 primer is recommended for maximum adhesion. Red.

Dow Corning® 1204 primer is a clear version of 1203.

Reversion Resistant RTV

Dow Corning® 3118 RTV encapsulant is a buff-colored, medium-viscosity, reversion-resistant encapsulant specially designed to cure in deep sections. It is supplied with its own curing agent, a master-batched co-reactant polymer. The required curing agent concentration is 4% by weight of the RTV encapsulant base.

Pot life and cure time vary with temperature. At 25 C, pot life is 1½ hours, and curing time is 24 hours.

PROTECTIVE COATINGS AND VARNISHES

Dow Corning offers a variety of protective coatings, including resilient conformal coatings, varnishes and wax-like films, which give physical and electrical protection to electric motors, transformers, circuit boards, memory planes, and other equipment. These coatings are highly resistant to humidity, and retain their properties even after thermal cycling.

Dow Corning® 3140 RTV noncorrosive coating is a tough, transparent, rubbery conformal coating that cures without emitting corrosive by-products. Coating clarity allows easy visual inspection of components, simplifies component repair or replacement.

Dow Corning® 3141 RTV noncorrosive coating is a white version of 3140.

DOW CORNING CORPORATION, MIDLAND, MICHIGAN 48640

DOW CORNING

DOW CORNING® SILICONE MATERIALS

PROTECTIVE COATINGS AND VARNISHES (continued)

Silastic® S-2288 dispersion cures to a tough rubbery coating that withstands repeated flash-over without tracking, reduces current leakage. It is used as an over-coating for porcelain and epoxy insulators, bushings and stand-offs, or any piece of electrical equipment subjected to severe arcing or tracking.

Dow Corning® 630 protective coating is transparent, dries to a flexible, non-melting, wax-like, water-repellent coating. It is easily removed for component repair by soaking in solvent and brushing, or by an ultrasonic solvent bath.

Dow Corning® GP-77 varnish is a tough, multi-purpose impregnant for Class A, B, F and H systems. Applied by dipping, flooding or impregnating, this varnish is used on equipment designed for operation at temperatures to 200 C, including random- and form-wound stators, dry-type transformers, and high-speed armatures.

Dow Corning® 997 varnish is designed for continuous service at temperatures to 250 C, gives superior protection against overload, severe duty cycling, high-temperature ambients, many chemicals, corrosive atmospheres and other environmental hazards. It has many times the thermal life of organic Class B varnishes.

Dow Corning® 1890 protective sealer is an easy-to-apply silicone rubber dispersion used to form a tough, rubbery protective coating on motor stator windings, bus-bars, transformers, splices and connections and many types of electrical hardware. It protects against moisture, abrasive dust, chemicals and weathering, can be applied by spraying or brushing.

ONE-PART RTV ADHESIVE/SEALANTS

One-part, ready-to-use Dow Corning® and Silastic® brand adhesive/sealants are general-purpose, room-temperature-curing materials suitable for a wide range of applications. When fully cured, they have all the physical and electrical properties typical of silicone rubber, including excellent heat stability, resistance to weathering, moisture and ozone, and excellent insulating properties.

They are supplied in collapsible tubes or dispensing cartridges, and are easily extruded onto the surface where the bond or seal is desired. They are easily worked with a spatula . . . do not sag or slump of their own weight, even on vertical or overhead surfaces. For maximum adhesion on surfaces other than silicone rubber, Dow Corning® 1203 primer is recommended.

Silastic® 732 adhesive/sealant is used to bond metals, glass, plastic, silicone rubber, asbestos and ceramics. Typical uses include insulating and sealing wire and cable splices and connections; holding conduit terminal boxes in place; and bonding components to printed circuits. It retains its flexibility from −60 to 260 C, provides excellent electrical insulating properties, and resists weathering, moisture, ozone and other harsh environmental conditions.

Dow Corning® 3144 RTV noncorrosive adhesive/sealant cures without releasing corrosive byproducts. It is ideal for use in contact with copper, particularly printed circuit boards, small-diameter wire, and other corrosion-sensitive electronic components. It is a translucent, toothpaste-consistency material that cures tack-free in 24 hours. It offers unusually high strength, and retains its resilience from −75 to 250 C.

Dow Corning® 3145 RTV noncorrosive adhesive/sealant is an opaque version of 3144.

DOW CORNING CORPORATION, MIDLAND, MICHIGAN 48640

DOW CORNING

DOW CORNING® SILICONE MATERIALS

DIELECTRIC COMPOUNDS

Dow Corning supplies a variety of non-hardening, water repellent, grease-like silicone compounds for use as water-repellent seals and insulators for switches, cable connectors, battery terminals and many other applications. These materials withstand harsh environments, are noncorrosive to metals, inert to most plastics, and practically nonvolatile.

Dow Corning® 3 and 103 compounds are used to reduce corrosion on switch contacts and battery terminals; to lubricate rubber and plastic O-rings and seals; to insulate and waterproof ignition systems, control switches and circuit breakers; to prevent sticking of switches exposed to icing conditions. They are serviceable from —40 to 200 C and withstand a wide range of harsh conditions.

Dow Corning® 7 and 107 compounds are light gray, translucent materials that can be applied as supplied, or dispersed in a solvent and applied by brushing or spraying. They serve as excellent mold release agents.

Dow Corning® 4 compound, similar to the 103 compound, features constant consistency from −100 to 200 C. It is designed to meet the requirements of MIL-I-8660B. Applications include use on battery terminals, switch contacts, relays, high tension ignition harness and as a lubricant for O-rings and seals made from rubber and plastics.

HEAT SINK COMPOUND

Non-hardening, non-melting heat sink compound provides the fast heat removal that keeps diodes, transistors, rectifiers and other electrical and electronic devices operating longer and more efficiently.

Dow Corning® 340 silicone heat sink compound is a grease-like silicone material heavily filled with heat-conductive metal oxides. Thermal conductivity (k factor) is in the range of 0.0015 cal/cm²-sec-(°C/cm).

Product Type	Product Designation	Packages
Potting and Encapsulating Resins	Sylgard® 51 dielectric gel	1, 8, 40, 400 lb. cans
	Sylgard® 182 resin, clear, heat cure	1, 11, 55, 5, 50 lb. kits
	Sylgard® 183 resin, black, heat cure	
	Sylgard® 184 resin, clear, RT cure	
	Sylgard® 185 resin, black, RT cure	
	Sylgard® 186 resin, translucent, RT cure (high strength)	
	Sylgard® 187 resin, black, RT cure (high strength)	
	Sylgard® 3150 resin, white, heat cure (one part)	1, 10, 50, 500 lb. cans
	Sylgard® primer	pint and gallon cans
RTV Rubber Encapsulants	Dow Corning® 3110 RTV encapsulant	1 lb., 10 lb. pail, 50 lb. pail
	Dow Corning® 3112 RTV encapsulant	
	Dow Corning® 3116 RTV encapsulant	
	Dow Corning® 3120 RTV encapsulant	
	Dow Corning® RTV catalyst F, S, H, 1 and 4	tubes, 1 lb., 5 lb. and 10 lb. cans
	Dow Corning® 3118 RTV encapsulant (4% catalyst)	1 lb., 10 lb. pail, 50 lb. pail
Impregnating Varnishes	Dow Corning® GP-77 varnish	1 and 5 gallon cans, 55 gallon drums
	Dow Corning® 996 varnish	1 and 5 gallon cans, 55 gallon drums
	Dow Corning® 997 varnish	pint, gallon, 5 gallon, 55 gallon drums
Protective Coatings	Dow Corning® 1890 protective sealer	2 lb. jar, 8 lb. and 38 lb. pails
	Dow Corning® 991 varnish	1 and 5 gallon cans, 55 gallon drums
	Dow Corning® 630 protective coating	pint, gallon, 5 gallon
	Dow Corning® 3140 and 3141 RTV noncorrosive coatings	2 oz. tubes; 1 lb. cans
Adhesive/Sealants	Silastic® 732 RTV adhesive/sealant	2 and 5 oz. tubes; 6 and 12 oz. cartridges
	Dow Corning® 899 RTV adhesive/sealant	12 cartridges/carton (cartridge 1/12 gal.)
	Silastic® 140 RTV adhesive/sealant	2 and 5 oz. tubes; 6 oz. cartridges
	Dow Corning® 3144 and 3145 RTV adhesive/sealants	2 oz. tubes; 12 oz. cartridges
Compounds (Dielectric)	Dow Corning® 3 and 103 compounds	2 and 8 oz. tubes; 10 and 50 lb. cans
	Dow Corning® 7 and 107 compounds	2 and 8 oz. tubes; 10 and 50 lb. cans
	Dow Corning® 4 compound	2 and 8 oz. tubes; 10 and 50 lb. cans
	Dow Corning® 19 compound	8 oz. tubes; 10 lb. cans
Compounds (Heat Sink)	Dow Corning® 340 heat sink compound	5 oz. tubes; 14 oz. cartridges; 20 lb. and 100 lb. pails

Worldwide Service and Prompt Delivery for Quartz, Lucalox® and Electronic Glass Products

G

GLASS

Machine-pressed shapes, formed to specification without additional grinding and polishing, can be furnished in a wide variety of glass compositions. At far right, is an example of an as pressed lens system for an audio visual entertainment unit for children. A highly experienced staff is available for customized orders in glass tubing, special glass formulations (beads) and other glass components.

L

LUCALOX®

Lucalox®, a polycrystalline alumina, is available in standard tubing, rod, plates, discs and custom parts. This versatile ceramic is ideal for such critical applications as electrical insulators in corrosive environments, where wear surfaces require dimensional stability and for windows when low loss factor is important. Lucalox can transmit up to 90% of total light in the visible spectrum. Outstanding characteristics include: chemically inert to cesium, fluorine, sodium, potassium; transmits radiation in both visible and infrared wave lengths; surface may be polished to less than one micro-inch; high dielectric strength. Lucalox can be fabricated to complex specifications. Standard shapes in stock.

Q

QUARTZ

General Electric high purity fused quartz is available in clear and translucent tubing and rod, solid shapes, standard fabrication, and to custom specifications. New Type 125 fused quartz, a high-quality, economical material which features the absence of large bubbles, is suitable for commercial grade optical and mirror applications. It has low stress birefringence and high transmission in both UV and IR wavelengths.

Insulating Tubings and Sleevings- High Temperature Wire and Cable

HYGRADE®

HYGRADE Fabric-Base Insulating Sleevings, the oldest and best known in the industry, are constructed of carefully braided fiberglass yarn, impregnated and coated with varnishes, vinyls, resins, or silicone rubber compounds.

HYGRADE SR-398 Silicone Rubber Coated Fiberglass Sleeving is a Class H material of closely woven glass braid coated with highly abrasion-resistant silicone rubber.

HYGRADE SV-862 Silicone Varnish Impregnated Fiberglass Sleeving is a flexible Class H insulation with unusual resistance to temperature extremes and weathering.

HYGRADE VF Flexible Fiberglass Sleeving is a tough, Class B insulation of plastic-covered fiberglass combining excellent electricals, flexibility, heat stability.

HYGRADE Polytube 463 Class F Flexible Fiberglass Sleeving is an acrylic-coated material compatible with the wire enamels used in motors and transformers.

HYGRADE Polytube 962 Class F Flexible Fiberglass Sleeving is a polyurethane-coated insulation compatible with the wire enamels in motors and transformers.

HYGRADE Thermoflex 1200 Class C Flexible Fiberglass Sleeving is made of 100% tightly braided fiberglass. For use at continuous temperatures as high as 1200°C.

HYGRADE Thermoflex 500 Class C Flexible Fiberglass Sleeving is made of tightly braided and pigmented fiberglass. For continuous operating temperatures to 500°C.

Ask for data sheets on these HYGRADE and FLEXITE products

FLEXITE®

Included in the FLEXITE line are extruded plastic tubings of Teflon, Silicone Rubber, Vinyls, Polyethylene, Nylon, and other plastics; Shrinkdown Heat Shrinkable extruded Tubings; and TGL Triangular Guide Line Wrapping Tape.

FLEXITE TFE Extruded Tubing of DuPont Teflon is a flexible material for continuous use at 250°C, with outstanding electricals, heat stability, chemical resistance.

FLEXITE AR-400 Modified Teflon Tubing is a flexible material with exceptional abrasion and cut-through resistance at temperatures from —70°C to 250°C.

FLEXITE SR-200 Silicone Rubber Extruded Tubing is made of an extremely elastic compound, and is excellent for high voltage applications at Class H temperatures.

FLEXITE Teflon FEP Extruded Tubing is a fluorocarbon tubing suitable for continuous use at 200°C. It possesses outstanding electricals and chemical resistance.

FLEXITE HT-105C Extruded Vinyl Tubing is U/L recognized for continuous use at 105°C. It is a strong, very flexible tubing suited for many general applications.

FLEXITE E Extruded Vinyl Tubing is an extremely flexible tubing designed primarily for low temperature applications (to —68°C), as in aeronautical instrumentation.

FLEXITE Polyethylene is a flexible Class A tubing offering excellent electricals, compatibility and abrasion resistance over a wide (—70°C to 80°C) temperature range.

FLEXITE Shrinkdown HT-105 Heat Shrinkable Tubing is a flexible material supplied in expanded sizes to cover shapes; it shrinks 50% on application of heat (190°F).

FLEXITE Shrinkdown PO-135 is a Class B flexible tubing which shrinks at 235°F. It is widely used to jacket cables, insulate terminals, and as a printed marker.

FLEXITE Shrinkdown TE-250 is a Heat Shrinkable Teflon Tubing for use at Class H temperatures. It shrinks at 621°F to make a form-fitting Teflon cover over shapes.

Dilectrix FLUOROFILM® TFE and TFE/FEP TEFLON TAPES AND FILMS

Fluorofilm is a void-free multilaminar cast film. It is fabricated by the unique Dilectrix continuous casting process, wherein each micro-thin lamina is independently sintered and cured. Each successive lamina is fused to the preceding one until the predetermined thickness is achieved. This process yields two important features: freedom from voids or pinholes and greater tensile strength.

Dilectrix Fluorofilm cast Teflon films and tape conform to Military Specification MIL-P-22241A. The basic film is cast in thicknesses from ⅛ mil to 5 mils, widths from ¼" to 12", and splice-free continuous lengths of 500 ft.

TYPE	THICKNESS RANGE (MILS)	DESCRIPTION	TYPICAL APPLICATIONS
C	⅛ to ¾	Cast TFE† film.	Delay lines, insulation and capacitor dielectric — General purpose insulation.
CD	¼ to ¾	Cast TFE film, Duplex wound. 2 rolls, of same film thickness, wound on one core.	In capacitors to eliminate dust between layers, loading of only 2 rolls on winders, stands higher tension when winding on mandrels.
CM	¼ to ¾	Cast TFE film. One side metallized. Pure aluminum vacuum applied, controlled thickness produces resistance of approx. 1 ohm/sq. in.	Conductor and dielectric in single unit for capacitor manufacture. Available with insulated margins. Reduces unit size and reject loss.
DF-100**	1, 2, 3, 4 & 5	Multilaminar TFE film. Processed for void-free and pinhole-free qualities.	Wire and cable wrapping, coil interlayer, slot and phase insulation. Anti-friction surfaces.
DF-1700**	1, 2, 3, 4 and 5	Multilaminar TFE. One side FEP coated and heat bondable.	Folded and weld-seamed, an excellent chemical tubing resistive to corrosive fumes, gases, liquids.
DF-1700-DB**	2, 3, 4 & 5	Multilaminar TFE film. Both sides FEP coated and heat bondable.	Insulation over wire shielding because it takes lower temperature to weld it together than is required for an extruded, unsintered TFE tape.
DF-1100**	2, 3 and 4	Multilaminar TFE film. One Side Receptive to Adhesives by a Proprietary Surface Treatment.	Same as DF-500 but for more exacting applications.
DF-1200**	2, 3 and 4	Multilaminar TFE film with Pressure Sensitive Backing.	Most versatile. Adheres to most any surface: Metal, wood, ceramics, plastics, etc. Used as harness bundling, spot insulation, slot linings, core wrapping. For non-slip surfaces, gasket facings, etc.
DF-1300	2½ only	Multilaminar TFE film. Black. Both Sides Coated for Epoxy Adhesion.	Coil wrappings where epoxy potting resins are used.
DF-1400	2½ only	Multilaminar TFE film. Black. Treated to make both sides conductive.	Ideal for low noise cable wrapping.

Dilectrix CORPORATION A SUBSIDIARY OF NATVAR CORPORATION • 69 Allen Blvd., Farmingdale, N.Y. 11735

NATVAR – one source for all types of flexible electrical insulation

ATVAR COATED FIBERGLASS SLEEVINGS

atvar coated fiberglass sleevings combine the strength and eat-resistance of a braided glass fiber sleeve with selected oatings to achieve strong, reliable insulations for all tempera-ures up to Class 180. The various coatings have been selected or the optimum combination of properties required for their espective temperature ranges. All Natvar coated sleevings are nspected and tested in accordance with ASTM Specification)-350. They conform to ASTM D-372 and applicable NEMA and nilitary specifications.

NATVAR STYROFLEX® Capacitor Film

Natvar Styroflex film permits the manufacture of close tolerance capacitors with high yields and exceptional insulation resistance values. Styroflex is available in thicknesses from 0.00025″ to 0.006″ and widths from ½″ to 10″.

NATVAR VINYL TUBINGS

Natvar vinyl tubings are available with a wide range of properties. Each class of tubing is produced from a vinyl compound especially formulated to yield the most favorable properties for the intended use. Natvar tubings are offered to conform to the following specifications: MIL-I-63ID, Type F, Form U: Grade A, Class I, Category I; Grade A, Class II, Category I; Grade B, Class I and II, Category I; Grade C, Class I and II, Category I. MIL-I-7444B. MIL-I-22076A.

NATVAR COATED MATERIALS

Natvar manufactures a complete line of cured and semi-cured (B Stage) coated fabrics for all temperature classes. Coatings include silicones, polyesters, epoxides, isocyanates and acrylics. Base fabrics are cambric, fiberglass, polyester-fiberglass and Nomex*-fiberglass. They are inspected and tested in accordance with appropriate ASTM and NEMA standards, and conform to Military Specifications where applicable.

*DuPont trademark

COATED FABRICS AND COMPOSITES

CLASS 180°C
- Silicone Rubber Coated Fiberglass
- Silicone Varnished Fiberglass
- Coated Fiberglass and Quinorgo Combination
- Dura™ Resin B-Stage Products
- Polytemp™ Polyester Coated Fiberglass

CLASS 155°C
ISOCYANATE COATED FABRICS
- Isoglass® Coated Fiberglass
- Isoteraglas® Coated Polyester-Glass
- Novaglas-P® Coated Nomex*-Glass
- Isoplex® Various Fiberglass, Asbestos or Film Composites
- F-LAR™ Structured Polyester Film
- Semi-Cured (B Stage) Coated Fabrics

CLASS 130°C
- Teraglas® Varnished Polyester-Glass
- Varnished Fiberglass
- Varnished Polyester Film
- Various Fiberglass and Asbestos Composites
- Acryliglas® Acrylic Coated Fiberglass

CLASS 105°C
- Varnished Cambric
- Oil Packed Varnished Cambric
- Varnished Cambric and 100% Rag Paper Composite

FLEXIBLE SLEEVING

CLASS 180°C
- Silicone Rubber Coated Fiberglass Sleeving

CLASS 155°C
- Isolastane® Fiberglass Sleeving
- Acryliglas® Fiberglass Sleeving

CLASS 130°C
- Vinyl Coated Fiberglass Sleeving

EXTRUDED PLASTIC TUBING AND TAPE

CLASS 105°C
- High Temperature Vinyl Tubing
- Vinyl Transformer Tubing
- High Temperature Vinyl Tape

OTHER EXTRUDED PRODUCTS
- General Purpose Vinyl Tubing
- Low Temperature Vinyl Tubing
- Polyethylene Tubing and Tape
- Polypropylene Tubing and Tape
- Polyurethane Tubing
- Styroflex® Capacitor Film

We have the capabilities for solving your insulation problems and invite your inquiries.

MULTIPART ALUMINA SUBSTRATES

FEATURES

- Multi-printing for economical production
- Net sizes to less than .10 square inches
- Minimum kurf for high density thin films
- 96% to 99.5% Al_2O_3
- Variety of sizes, colors, finishes, metallizations available
- Glazed 96% available for inexpensive thin films

GENERAL DESCRIPTION

Varadyne's MULTIPART alumina substrates have found particular acceptance in hybrid microelectronics and semiconductor industries. High standards in grain size control and laminating compaction have yielded high density substrates in which the user can expect straight, accurate separation of individual pieces, as well as smoother, more uniform surfaces.

Kurf loss of MULTIPART substrates is less than .003 inches wide with the depth approximately 50% of material thickness. As a result, a single part can be easily snapped from the multipiece substrate with minimum loss in area and without rounded, jagged, or severely chamfered edges.

MULTIPART substrates are available in a variety of shapes, sizes, colors, metallizations, and surfaces, including glazed or polished finish. Typical size is 2 x 2 inches; other sizes can be accommodated. Metallization is one of Varadyne's specialties, with molymanganese, thin film patterns, or any number of thick film inks (also produced by Varadyne) available. Both thick and thin film conductor-resistor networks are trimmed to tolerances specified by the customer; less than 0.1% can be maintained.

DESIGN CRITERIA

PARAMETER	AQL	STANDARD
Outside Dimensions	1.5 cum.	±1%, none less than ±.003″
Critical Dimensions (when required)	1.5 cum.	±½%, none less than ±.002″
Hole Centers	1.5 cum.	±1%, none less than ±.003″
Hole Diameters	1.0 cum.	±10%, none less than ±.001″ and none more than ±.005″
Hole Diameters (glazed)	1.0 cum.	±10%, none less than ±.002″ and none more than ±.005″
Thickness	1.0	±10%
Scored Substrates		Substrates should break to ±1%, none less than ±.006″
Camber	2.5	.004″ per inch, none less than .002″

HOW TO ORDER

When ordering substrates, specify each of the following categories:

Al_2O_3 PURITY

96%
99.5%

PLATING

Nickel
Copper
Silver
Tin
Gold

COLOR

White
Blue
Pink (opaque)
Black
Coral

THICKNESS

Range:
.005 to .028

METALLIZATION

Molybdenum-manganese
Palladium-gold
Platinum-gold
Palladium-silver
Gold
Chrome-copper
Chrome-gold

SURFACE FINISH

1 glaze
2 polish
10 as fired (99.5%)
24 as fired (96%)

SIZE

A number of segment sizes established as industrial standards are readily available. Typical multipart size is 2″x2″; others are supplied upon request.

LUMINA SUBSTRATES CAPABILITIES

EATURES

- Excellent for thick and thin film applications
- Surface finish less than 25 microinches
- Camber less than .004in./in.
- High dielectric strength, low dielectric loss
- High resistivity
- Excellent corrosion resistance

GENERAL DESCRIPTION

Varadyne's experience in ceramic and ceramic-metal components provides a source for alumina substrates in virtually any size and shape, metallized or unmetallized. VS-95, an extremely hard, vitreous, 95% aluminum oxide (Al_2O_3) body, is manufactured with a 25 microinch or better as-fired surface for use in thick film work, and a glazed surface for thin film work.

Substrates are also available in 85 to 99% Al_2O_3, glazed or unglazed, for similar applications. All substrates can be supplied in colors for application coding and traceability. The smoother and flatter surface of the substrates assures pattern definition and deposit uniformity. Varadyne alumina substrates have inherently high mechanical strength and are capable of high temperature operation. They possess excellent thermal conductivity properties, allowing the hybrid circuit desginer to achieve maximum power packaging density.

Varadyne's most unique substrate capability is substrate metallization. Thick and thin film conductor and resistor networks are available with resistors trimmed to tolerances specified by the customer. In addition, molymanganese metallization can be provided, plated or unplated.

APPLICATIONS AND CONFIGURATIONS

- Base material for thick and thin film hybrid circuits
- Parts for ceramic flat packs
- Insulators and standoffs
- Available in colors and opaque
- Scored substrates
- Any size and shape up to 3" x 4" x .050"
- Holes as small as .010" in any shape
- Gold and gold over nickel plating (MoMn base)
- Solder coated

DESIGN CRITERIA

Parameter	AQL	Standard
Outside Dimensions	1.5 cum.	±1%, none less than ±.003"
Critical Dimensions (when required)	1.5 cum.	±½%, none less than ±.002"
Hole Centers	1.5 cum.	±1%, none less than ±.003"
Hole Diameters	1.0 cum.	±10%, none less than ±.001" and none more than ±.005"
Hole Diameters (glazed)	1.0 cum.	±10%, none less than ±.002" and none more than ±.005"
Thickness	1.0	±10%
Scored Substrates		Substrates should break to ±1%, none less than ±.006"
Camber	2.5	.004" per inch, none less than .002

† Te value is the temperature at which a centimeter cube has a resistance of one megohm.

RELIABLE PRODUCTS DELIVERED ON TIME

VARFLEX *the complete line of electrical insulating sleeving and tubing*

Whatever your problem, heat, cold, flexibility miniaturization, high insulating or dielectric strength—Varflex can supply the required reliability and delivery. Our rapidly expanding plant is fully equipped to supply sleeving for any combination of characteristics you may need. In addition to maintaining large stock for off-the-shelf delivery, Varflex has the productive capacity to provide prompt delivery (often 48 hours) on special orders. As insulation specialists, we are ready to work with you on unusual specifications or applications.

Check your needs against this complete line:

VARGLAS SILICONE RUBBER. Tubing: The ultimate in flexibility, yet dielectric protection to 8000 volts. Class H-A-1 certified to meet Government Specification MIL-I-18057 (SHIPS). Class H-B-1 (4000 volts) available, also. Continuous exposure from minus 70° to 400°F. does not affect coating or Fiberglas braid. Sleeving: Made in Class H-C-1 (2500 volts), Class H-C-2 (1500 volts) and Class H-C-3.

VARGLAS SILICONE RESIN. Tubing: Class H-A-1 is recommended for applications requiring extremes of heat endurance and high dielectric strength (7000 volts). Class H-B-1 is identical except for dielectric guarantee (4000 volts). Good abrasion resistance. Both grades conform to MIL-I-3190A. Sleeving: Made in Classes H-C-1 (2500 volts), H-C-2 (1500 volts) and H-C-3.

SILFLEX SLEEVING. A light coating of Silicone resin on Fiberglas braid. Extremely flexible within a temperature range from minus 85°F. to 500°F.

VARGLAS SILICONE LEAD WIRE. Made from solid or stranded wire covered with one or more walls of Fioerglas braid and impregnated with Silicone. Built to your specifications.

VARGLAS SILICONE TYING CORDS. Continuous filament Fiberglass cords impregnated with Silicone resin, 1/64" to 1/4" diameter. Specify Type 46 for dry cure, Type 48 for tacky cure.

VARGLAS CLASS F TUBING. Made with synthetic resins such as epoxy, polyester or urethane on glass braid and offering better than Class B heat resistance (up to 155°C for continuous operation) while maintaining good electrical properties.

VARFIL TUBING AND SLEEVING. Fiberglas braids impregnated with polyester resin. Four grades available in coils as well as 36" lengths in most sizes. In a class by itself because of its toughness, flexibility, high temperature resistance and ability to withstand bending and twisting without dielectric loss. Compatible with varnish. Over 1000 hours at 125°C., with intermittent operation at 150°C.

VARFLO TUBING AND SLEEVING. Class B insulation. For those who need flexibility, solvent, oil and moisture resistance. Has good shelf life and will not lose dielectric strength when subjected to severe twisting. Three grades . . . Classes B-A-1, B-B-1 and B-C-1. Flame and fungus resistant if specified. B-A-1 approved under MIL-1-21557. Passes proposed Navy 90° bend test after 2,000 hours at 300°F with 3500 volt end point.

VARGLAS VARNISHED TUBING. Flexible continuous coatings of flame resistant varnish built up over Fiberglas braid in eight or more carefully controlled operations. Varnished tubings have thinner walls and good heat resistance.

VARGLAS VARNISHED SLEEVING. NEMA Classes B-C-1, B-C-2 and B-C-3 are similar except for dielectric strength. The impregnant is oleoresinous varnish.

VARGLAS ACRYLIC CLASS F (155°C). Highly resistant to acids, organic solvents, oils and water and exhibits fair resistance to alkalies. It is compatible with polyester, acrylic, epoxy, phenolic and formvar wire enamels. Designed to perform for long periods in the 150°C-175°C range without loss of any electric or physical properties. All standard grades.

VARGLAS LECTON ACRYLIC. Specifically designed for hermetic motors. Non-contamination of Freon and other refrigerants in Class B motors. B-A-1, B-B-1, and B-C-1 grades.

VARGLAS NON-FRAY SLEEVINGS: Type H: The normalizing treatment given the Fiberglas braid removes the organic impurities and tends to hold the individual filaments together. The lack of any bonding agent means it may be subjected to temperatures as high as 1600°F. Recommended for applications where dielectric requirements are not of prime importance. Resists fungus and is noncorrosive. Type HP: Similar to Type H, but dyed various colors for coding purposes. Ideal as secondary insulation where primary covering might disintegrate due to high temperature or continual flexing. Colors may fade at 300°F. Type HO: A very light treatment of resin added after the braid has been normalized—just enough to hold the sleeving round for accurate cutting. Will distend to cover soldered joints or terminals. Available in eight colors. Colors fade at 300°F., but sleeving unaffected up to 1600°F. Better by 400° than formerly available.

VARGLAS LITEWALL SLEEVING. Wall thickness of Type A is .008" and of Type B, .006". Both types available untreated or treated. If treated, may be supplied in colors. Standard I.D. sizes 1/16" to 1/2" inclusive. Larger sizes on request.

SYNTHOLVAR EXTRUDED TUBING. Made from vinyl polymers. High dielectric and tensile strength. Will not support combustion nor absorb moisture. Smooth surface, thin wall and flexibility all make for ease in assembling operations. Super HH for installations where temperatures of 105°C. must be withstood. Type XLT will function at temperatures down to —65°C. Specify fungus resistant tubing where needed. Conforms to applicable MIL specifications.

COTTON OR RAYON TUBING. These tubings are furnished with varnish as the impregnant. They are braided from long staple yarns. Standard NEMA grades. They are Classes A-A-1 and A-B-1. Also, sleeving is available in three NEMA grades. Classes A-C-1, A-C-2 and A-C-3.

Teflon Extrusions — Properties and Applications

An almost unlimited range of uses exists for Zeus Teflon extrusions. Their tolerance to temperatures from +500°F to −100°F and their excellent electrical properties make them ideal for a wide variety of insulation applications. (Dielectric breakdown voltage is as high as 1000 volts per mil of thickness.)

Teflon's resistance to ultra-hot and ultra-cold corrosive liquids and gases opens up another range of uses. Teflon is resistant to all known acids, alkalies and solvents. Water absorption is practically nil.

And Teflon's "anti-stick" properties make it ideal for a multitude of mechanical uses. Contact our engineers for helpful data on how Teflon extrusions can improve your products or processes.

Fused quartz or fused silica. Call on Amersil.

When your plans call for fused quartz or fused silica, call us. Amersil produces both in forms that are highly pure, non-contaminating, resistant to acid and thermal shock, and exhibit high dielectric strength. Our materials can be ordered in a variety of forms and sizes that are either transparent, opaque, or combinations of each. Both types are available as furnace tubes, epitaxial reactors, bell jars, insulators, slice boats, diffusers, distillation apparatus, beakers, flasks, joints . . . and tubing, rod, plates and discs. Amersil is also sales agent for Worden Quartz microbalances and springs.

Thermometals® for thermostatic functions

Thermometals are thermostatic bimetals that change shape with temperature and build up force with change of temperature when constrained. They can be used for Temperature Indication, Control and Compensation or Sequence Control. Thermometals can be rolled to any thickness, formed into almost any shape . . . plated, brazed or welded.

Tungsten and sintered metals for contacts

Ideal materials for contacts for heavy duty applications. Our special powder metallurgy processes make possible contacts of sintered materials that can't be alloyed. Available in rivet form, steelbacks, faced screws, discs, washers and special shapes. Assemblies available riveted, hot upset, welded or brazed.

Precious metals and alloys for contacts

Over 1750 precious and sintered metals for electrical contacts. With this variety we can produce every conceivable form of contact in sizes ranging from microminiature to 1¼ in. square (NEMA #6 & #7) motor starters. Whether it's for make and break or for rotating systems we can design and produce the contacts you need.

We have the experience, the engineering and production capabilities to solve any of your contact or thermostatic metal problems. For information and/or engineering assistance write the H. A. Wilson Technical Service Department.

If you have the application- we have the iron oxide

(or, we'll develop it for you...!)

HIGH PURITY IRON OXIDES

High purity iron oxides especially suited for use in both hard and soft ferrites and garnets. Available in both spheroidal and acicular shapes with average particle diameters from 0.2 to 0.8 microns. Impurities are at a minimum; Fe_2O_3 assay is 99.5% for the spheroidal type.

MAGNETIC IRON OXIDES

Magnetic iron oxides—both black octahedron ferrosoferric and brown acicular gamma ferric—for audio, video, computer, and instrumentation tapes; memory drums; cinema film stripping; magnetic inks; transfer ribbons; etc.

Whatever your application for these important oxides, there's probably a Williams® high purity iron oxide or IRN® magnetic iron oxide available with the exact chemical and physical characteristics you need. If we don't have it on hand, our laboratories are equipped to work with you to develop it.

For tech reports, or for specific answers to your specific problems, please write.

WIRES — RODS — TUBING
Sizes from .0005 to 1¼" diameter in continuous or cut lengths.

ROLLED AND FORMED SHAPES
Facilities available for precision sections of unusual configurations. From almost any alloy.

BARS — INGOTS — CASTINGS
In weights from milligrams to several hundred pounds.

CLAD METALS

STRIP, FOIL AND SHEET
Thickness from .0003 to 2", widths from .005 to 24".

WIRE RINGS AND PREFORMS
Sizes from .020 to 24" inside diameter formed from almost any size, round, square, rectangular or special shaped wire.

SPHERES, POWDERS AND GRAIN
Supplied in sizes from .0005 to .250 with tolerance as close as ±.0002 (or closer for special requirements.)

PREFORMS AND STAMPINGS
In sizes from .015 to 10" I.D., thickness from .0003 to ½".

Amperex CARBON FILM FIXED Resistors

High stability, very low noise level, and exceptionally long life make these resistors ideal for applications requiring a steady low power drop. Their accuracy and consistency are relatively unaffected by adverse climatic conditions.

Resistors of 10Ω to 10MΩ have a homogenous film of pure carbon deposited on a high grade ceramic body by cracking a hydrocarbon gas. Resistors having values lower than 10Ω have a nickel film instead of cracked carbon.

Contact caps of special alloy are pressed onto the ends of the resistor body to which the tin coated electrolytic copper connecting wires are welded. Finally the resistors are coated with three or more layers of a special lacquer for electrical, mechanical and climatic protection. This special lacquer will withstand regular industrial cleaning solutions used for cleansing printed circuit boards.

SPECIFICATIONS	⅛W	¼W	½W
	(CR16) 1-10-5P	(CR25) 1-4-5P	(CR37) 1-2-5P
Power rating P_{NOM} T_A <70°C	0.125W	0.25W	0.5W
Maximum voltage AC or DC	150V	250V	350V
Voltage (RMS) that may be applied for 1 sec. across insulated coat	300V	500V	700V
Insulation resistance	10^4MΩ	10^4MΩ	10^4MΩ
	ALL TYPES		
Ambient temperature	−55 to +155°C		
Temperature coefficient	see figure 2		
Noise voltage	see figure 1		

Voltage Breakdown

2x limiting voltage for 1 min. between terminals of resistor and metal foil ..... no breakdown or flashover

Short Term Overload (Room Temperature)

loaded 5 sec. at 6.25 P_{MAX} at 25°C (not to exceed 2x maximum voltage)
10 cycles: 5 sec on 10 sec off
ΔR_{MAX} 1%

Shelf Test at 25°C_{NOM} for 12 months

ΔR_{MAX} for R < 1MΩ 1.5%
R > 1MΩ 3%

Temperature Cycling

5 cycles: 3 hours −55°C
3 hours +155°C
ΔR_{MAX} ..... 0.5% or 0.5Ω

Humidity Specifications

After long-term exposure to damp heat at 40°C, 5 VDC
RH = 90-95% for 56 days with no drying
5 VDC
ΔR_{MAX} for R_{NOM} = 10Ω to 100 kΩ 1%
R_{NOM} = 100 kΩ to 1MΩ 2%
R_{NOM} = 1 MΩ or higher 3%

Solder Test (thermal shock)

Terminations immersed for 3 sec. up to .24 inches from end cap in solder bath at 350°C
ΔR_{MAX} ..... 0.5% or 0.5Ω

Lead Test

a. Tensile: diameter .024-.032 inches; load 2.20 lbs; 10 sec.
diameter > .032 inches; load 4.41 lbs;
10 sec. ..... no damage
b. Bending: diameter .024-.032 inches; load 1.10 lbs; 4 x 90°
diameter > .032 inches; load 2.20 lbs;
4 x 90° ..... no damage
c. Torsion: 2 x 360° in opposite directions ..... no damage
ΔR_{MAX} (for all tests) ..... 0.5% or 0.5Ω

Shock Test

3 x 1500 shocks in three directions: 50 G;
ΔR_{MAX} ..... 0.5% or 0.5Ω

Vibration

Frequency: 10-500 Hz
Displacement 0.06 in. or acceleration 10G; three directions; total 9 hrs.
ΔR_{MAX} ..... 0.5% or 0.5Ω

Voltage Coefficient 5PPM/Volt (0.0005%/Volt)

Resistor Range

Style	Limiting Voltage (Vdc or Vrms)	Resistance Range	Tolerance ±
CR16 (⅛ Watt)	150	10Ω to 220kΩ 270kΩ to 1MΩ	5% 10%
CR25 (¼ Watt)	250	1Ω to 9.1Ω 10Ω to 1MΩ 1.2MΩ to 10MΩ	5% 2% or 5% 10%
CR37 (½ Watt)	350	1Ω to 9.1Ω 10Ω to 1MΩ 1.2Ω to 10MΩ	5% or 10% 2%, 5%,or 10% 10%

PRECISION WIRE-WOUND RESISTORS

Balco/Marstan brings together the precision capacitor experience of Balco Capacitors and the precision resistor capability of Marstan Electronics. Balco/Marstan specializes in the design of ultraprecision film capacitors, wirewound resistors, and networks — resistive, capacitive, or RC. The product line — special or standard — is designed for the user who needs a combination of demanding performance parameters such as high stability, low temperature coefficient, and tight tolerance over a wide range of environmental extremes.

BALCO/MARSTAN ENCAPSULATED RESISTORS
Feature:

- Accuracies to 0.005%
- Matching of Sets to 0.005%
- Tracking of 1 PPM/°C
- Available Per MIL-R-93D

RESISTANCE WIRE CHARACTERISTICS

The following chart lists typical specifications. Special techniques developed by Marstan permit reliable combination winding of the listed alloys to provide any value of temperature coefficient from −10 to +6000 PPM/°C.

WIRE TRADE NAME	TEMPERATURE COEFFICIENT (PPM/°C)	THERMAL EMF vs COPPER (μV/°C)	RESISTIVITY (ohms/cmf)	USES
Moleculoy III Alloy COJ	0 ±5 0 ±5	+3.0 +10.0	800 1040	For high resistance values and very low temperature coefficient requirements. Excellent for resistive network applications.
Moleculoy Allow 800 Evanohm	0 ±20 0 ±20 0 ±20	+3.0 +2.5 +2.0	800 800 800	For high resistance values and low temperature coefficient requirements. Good for resistive network applications.
Neutroloy Alloy 45 Cupron	0 ±20 0 ±20 0 ±20	−43.0 −43.0 −43.0	300 300 300	For low resistance values and low temperature coefficient requirements. Good for resistive network applications.
Protoloy Alloy A Tophet A	+80 ±20 +65 +85	+6.0 +6.0 +4.7	650 650 650	For high resistance values and positive temperature coefficient requirements. Used for matching capacitor temperature coefficient in RC network applications.
Electroloy Alloy C Tophet C	+150 +150 +150	+2.0 +2.0 +0.6	675 675 675	For high resistance values and positive temperature coefficient requirements. Used for matching capacitor temperature coefficient in RC network applications.
Pelcoloy Balco	+4500 +4500	−40.0 −40.0	120 120	For high temperature coefficient requirements. Good for temperature sensitive resistor applications.
Nickel 270 HP Nickel	+5000 +6000	−22.0 −22.0	60 50	For very high temperature coefficient requirements. Excellent for temperature sensitive resistor applications.

PRECISION RESISTOR TYPES

MAW axial lead resistors are suitable for point to point wiring. Standard units are supplied with 2 inch solderable leads, but can be provided with weldable leads. Available in a range from 0.1 ohm to 20 megohms and 0.1 watt (0.093" diameter x 0.188" long) to 2 watts (½" diameter x 2" long).

MPC printed circuit style resistors are designed for applications where board space is critical. They are available in a range from 0.1 ohm to 10 megohms and ¼ watt (¼" diameter x ⅜" long) to 1½ watts (½" diameter x 1½" long).

MRL radial lug resistors are designed for center hole mounting to provide a rugged, space saving configuration. They can be provided with radial lead wire, if required. Available in ranges from 0.1 ohm to 15 megohms and ¼ watt (¼" diameter x ¼" long) to 2½ watts (⅞" diameter x 2⅛" long).

MCRL and **MCAW** ceramic bobbin resistors provide exceptionally high stabilities under wide extremes of temperature. Axial leads are standard on the MCAW series, while radial lugs or leads are available on the MCRL series.

MAHS hermetically sealed resistors provide exceptionally high stabilities under extreme environments. The MOA oil filled, hermetically sealed series is designed to permit more effective transmission of heat from the winding to the metal case and to provide greater long term stabilities.

Specials include the MTS series of temperature sensitive resistors with matched temperature coefficient characteristics, MNS "needle" shape and Multi Tap Precision Resistors. Many special sizes and shapes can be tailored to meet your specifications.

PRECISION NETWORKS

Our unique side by side resistor and capacitor processing ensures the ultimate in component compatibility and overall network performance. Resistors and capacitors can be precisely matched to track over wide temperature ranges.

Typical Networks Manufactured by Balco/Marstan:

- Matched impedance Attenuators
- Summing Networks
- Integrators
- Voltage Dividers
- Phase Shifters
- Binary Resistance Networks
- Twin T Networks
- Bridges
- A/D and D/A Converters
- Timing Networks

ALLEN-BRADLEY
Milwaukee, Wisconsin 53204

S-Level Hot-Molded Fixed Resistors.

Allen-Bradley hot-molded composition resistors are approved for the S-LEVEL of MIL-R-39008 in all wattage ratings and resistance values. Available in this high reliability category are style RCR05—⅛ watt, RCR07—¼ watt, RCR20—½ watt and RCR32—1 watt.

Allen-Bradley's exclusive hot-molding process molds the resistance material, insulation, and lead wires into a solid, integral structure. The result is a uniform, rugged unit that has excellent thermal diffusion characteristics.

S-Level qualified resistors are available in all MIL-R-39008 values from 2.7 ohms to 22 megohms with tolerances of ±5% and ±10%.

RELIABLE—Recognized as the most reliable of all electronic components. We have accumulated over 300-million test hours in accordance with MIL-R-39008.

TRACKING—When tested in flip-flop circuits, pairs of A-B resistors randomly drawn from the same package or reel will track with each other throughout changes of temperature, humidity, and load.

CONSERVATIVE RATINGS—All performance specifications are based on extensive testing, protracted field experience, and substantial safety factors.

TEMPERATURE STABLE—Between 0°C and 85°C, A-B hot-molded resistors exhibit a very low temperature characteristic, typically less than two or three percent deviation from room temperature values.

SOLDERABLE/WELDABLE LEADS—The hot-solder coated, oxygen-free copper leads are suitable for soldering or welding.

MASSIVE RESISTANCE ELEMENT—Large, uniform cross-section of the conducting material results in low current density without hot spots. This means a high overload capacity.

SOLIDLY EMBEDDED LEADS—Lead wire ends are formed to provide secure embedment and large contact area.

PERMANENT COLOR CODING—Bright, baked-on colors are impervious to commonly used solvents.

Style	Power at 70°C	Resistance Range	Tolerance	Voltage Rating (RMS)	Dimensions (inches)			
					a	b	c	d
RCR05	1/8 watt	2.7 ohms to 22 megohms	±5%—±10%	150 V	0.145	0.062	1.0	0.015
RCR07	1/4 watt		±5%—±10%	250 V	0.250	0.090	1.5	0.025
RCR20	1/2 watt		±5%—±10%	350 V	0.375	0.140	1.5	0.033
RCR32	1 watt		±5%—±10%	500 V	0.562	0.225	1.5	0.041

Industrial Grade Hot-Molded Fixed Resistors.

Allen-Bradley hot-molded composition resistors are high-quality units intended for general purpose use in the electronics industry. They are backed by more than 35 years of manufacturing experience comprising billions of resistors. All units feature rugged and reliable construction, solderable/weldable leads, uniform tracking characteristics, temperature stability, and conservative ratings.

These resistors are available in five ratings—⅛ watt (BB), ¼ watt (CB), ½ watt (EB), 1 watt (GB), and 2 watt (HB). Because of their small size, uniformity, ruggedness, and moderate cost, they are equally at home in industrial or consumer product applications. Units are available in all standard EIA and MIL resistance values.

Copper-clad hot-molded resistors (Types GM and HM) are vested with copper clamps for rigid mounting directly on metal chassis or panel. Such mounting is an advantage in equipment subject to shock and vibration. The copper efficiently conducts heat from the resistors to the chassis or panel. Insulation resistance is greater than 100,000 megohms. And the electrical insulation between the leads and the copper clamp can easily withstand 1500 volts. Capacitance between lead wires and clamp is low at approximately 5.6 MMF for Type GM and 9 MMF for Type HM.

Type	Power At 70°C	Resistance Range	Tolerance	Voltage Rating (RMS)	Maximum Ambient Temperature	Dimensions (inches)						
						a	b	c	d	e	f	g
BB	1/8 watt	2.7 ohms to 100 megohms	±5%—±10% ±20%	150 V	+130°C	0.145	0.062	1.0	0.015			
CB	1/4 watt	2.7 ohms to 100 megohms	±5%—±10% ±20%	250 V	+150°C	0.250	0.090	1.5	0.025			
EB	1/2 watt	1.0 ohms to 100 megohms	±5%—±10% ±20%	350 V	+150°C	0.375	0.140	1.5	0.033			
GB	1 watt	2.7 ohms to 100 megohms	±5%—±10% ±20%	500 V	+150°C	0.562	0.225	1.5	0.041			
HB	2 watts	10 ohms to 100 megohms	±5%—±10% ±20%	750 V	+150°C	0.688	0.312	1.5	0.045

NEW TYPE MP POWER FILM RESISTORS*

CHASSIS MOUNTED

Features: High Stability Micronox Film Element ▪ Non-Inductive ▪ Higher Resistance Range ▪ Lower Cost ▪ Low Profile—Smaller Size—Lighter Weight

Micronox film is fired on high strength ceramic substrate; then mounted on anodized aluminum base. This construction gives vastly improved efficiency in heat transfer from resistor element to chassis. Molded silicone encases the electrical elements for high environmental performance.

† Power rating based on chassis mounting — MP311 and MP312 on 6"x4"x2"x.040 aluminum chassis
MP329 and MP330 on 5x7x2x.040 aluminum chassis
‡ TC — 50ppm Referenced to 25°C, ΔR taken at +150°C and +275°C. (Low temp. TC will be nominally —85ppm/°C at —55°C. See typical R-T curve.)

Resistance Tolerance: ±1% standard (Other tolerances on special order.)
Insulation Resistance: 10,000 Megohms, dry. Method — Mil-R-18546D, para. 4.6.8.
Solderability: Per Mil-R-18546D, para. 3.7, para. 4.6.4.
Terminal Strength: Per Mil-Std-202, Method 211, Cond. A (Pull Test), 5 lbs., and Cond. B (Bend Test). Max ΔR, .2% or .2Ω, whichever is greater.
Thermal Shock: Per Mil-R-18546D, para. 4.6.9, max. ΔR, .5% or .2Ω, whichever is greater.
Momentary Overload: 2 times rated power or 1.5 times max. allowable working voltage, whichever gives the lower power, for 5 seconds. Max. ΔR, .5% or .2Ω, whichever is greater.
Moisture Resistance: Mil-Std-202, Method 106B, less steps 7a and 7b, max. ΔR, .5% or .2Ω, whichever is greater.
Life: Per Mil-R-18546D, para. 4.6.12, 1,000 hrs., Max. ΔR 1% or .2Ω, whichever is greater.
Shock, Medium Impact: 50G, per Mil-Std-202, Method 205, Cond. C.
Vibration, High Frequency: Per Mil-Std-202, Method 204, Cond. B, Max. ΔR .2% or .2Ω, whichever is greater, through shock and vibration sequence.

Fig. 1

Fig. 1. **Stacked Assembly** shows **high density packaging** of power resistors. By stacking with 2 inch square aluminum plates between the resistors, heat can be dissipated in three ways:

1. **Convection with plates oriented horizontally.** The power rating per graph, Fig. 2, is 4 watts each resistor and would be useful in rating applications where horizontal installation is necessary or where equipment is rotating and part orientation is variable.
2. **Convection with plates oriented vertically.** The power rating, per graph, Fig. 2, is 6 watts each resistor.
3. **Ducted Air Flow.** This method of application permits the highest possible power density and offers the additional advantage of ducting heat out of the equipment.

Fig. 3. **Power Rating vs. Chassis Area** provides design information for conventional application of MP resistors, per Mil-R-18546, by mounting on aluminum chassis or panel.

ADDOCK ADVANCED STATE OF THE ART

ICRONOX* Resistance Films

ronox resistance films are produced exclusively by dock Electronics. They are composed of complex oxides d in air at temperatures above 1400°F. The resulting films relatively insensitive to high ambient temperatures and rmal shock. Precision resistors, useable to 1000°F. can be de with these films. The films show negligible effect from isture.

This totally new approach to precision resistors and net- ks opens new design possibilities because of the wide istance range, precise temperature characteristics, and high perature and power capability. Temperature coefficient be accurately reproduced (±10ppm/°C. if required). The ical curve shown will vary slightly with resistivity of the film d configuration of the substrate.

Micronox oxide systems provide an almost continuous range of resistivity from 5 ohms per square to 25,000 ohms per square, without degradation of electrical characteristics throughout this range.

TYPE MG & MH Miniature Megohm Resistors

KCLUSIVE SHIELDED RESISTOR ODEL MH711, designed for extremely gh voltage applications, in very high sistance strings. Unit remains excep- onally stable since shielding prevents lm degradation from corona developed high voltage fields.

Miniaturized to one-fifth the size of conventional types, cover- ng the 1 to 220 megohm range. Micronox film sintered on igh strength core. End cap construction.

Resistance Tolerance: ±1% (tolerances to .2% on special order). **Insulation Resistance:** 100 megohms, minimum. **Overvoltage:** 1.5 times working voltage for 5 seconds, R shift .8% max. **Thermal Shock:** MIL-STD-202, method 107, cond. C, R shift .5% max. **Moisture Resistance:** MIL-STD-202, method 106, R shift .8% max. **Loadlife:** 1000 hours at rated power, R shift .8% max.

MICROMINIATURE FILM RESISTORS

TYPE ML & MM Precision Film Resistors

Micronox film on high strength core for greater resistance range. End cap construction. Molded type case for increased resistance to abrasion and solvents. Twice the power rating of metal film resistors of a given size.

Resistance Tolerance: ±1% (tolerances to .1% on special order). **Insulation Resistance:** 100 megohms, minimum. **Overload:** 5 times rated power for 5 seconds, R shift .5% max., or .5 ohms max., whichever is greater. **Overvoltage:** 1.5 times max. voltage for 5 seconds, R shift .5% max., or .5 ohms max., whichever is greater. **Thermal Shock:** MIL-STD-202, method 107, cond. B, R shift .2% max., or .5 ohms max., whichever is greater. **Moisture Resistance:** MIL-STD-202, method 106, R shift .5% max., or .5 ohms max., whichever is greater. **Loadlife:** 1000 hours at rated power, R shift .5% max., or .5 ohms, whichever is greater.

CADDOCK ELECTRONICS
3127 Chicago Avenue, Riverside, California 92507 • Telephone: (714) 683-5361

SPECIAL RESISTIVE DEVICES

Caddock produces miniature wirewound and film resistors, as well as networks on ceramic substrate. We can combine the best of these techniques in producing your special resistor or network requirement.

- **HIGH RESISTANCE RESISTORS to 5000 megs, 1%, 80 PPM/°C**
- **PRECISION VOLTAGE DIVIDERS with tracking as close as 2 PPM/°C**
- **DAC LADDER NETWORKS to 12 bits, and DECADE NETWORKS to your specs**

Send us prints or sketches on your specific requirement for a prompt design and cost proposal.

MOLDING FACILITIES equipped to produce your package design, or mold your networks in available package configurations.

X-RAY FACILITIES available to verify and assure integrity and soundness of package—up to 100% inspection.

TESTING FACILITIES to supply output and performance data under actual operating temperature extremes. Qualifying test data available to satisfy qualification requirement on similar devices.

CAL-R® INC. RESISTOR DIVISION

a subsidiary of CapTech, Inc.

PRECISION POWER RESISTORS

FEATURES

1. Copperweld leads standard. Nickel A or Alloy 180 available.
2. Core-alumina and steatite ceramics.
3. Silicone coating to give maximum wire protection and extra high resistance to moisture.
4. Failure rates of less than .006% per 1000 hours @ +25°C with 60% confidence.

ELECTRICAL CHARACTERISTICS

A. TOLERANCES: 5.0% to .01%. 1% standard for off-shelf delivery. Special matching available to .001% tolerance.
B. TEMPERATURE COEFFICIENT: 20 ppm/degree C standard. Special T.C.'s to 5 ppm/degree C available.
C. Dielectric strength greater than 1000 V.A.C.
D. Special configurations available on request.
E. SA (X) Types Thermal shock proof from 275°C to —55°C.
F. SAV (X) Types Thermal shock proof from 350°C to —55°C.
G. STABILITY: consistent with tolerances, all parts stabilized in production. Less than 0.1% drift in 2000 hours operation at full Cal-R wattage rating for 1% tolerance parts.
H. RESISTANCE RANGES: .05 ohms to 250K ohms.
I. INDUCTIVE TYPES: Single layer space wound with largest wire permissible.
J. Non-inductive Types feature dual balanced windings for minimum inductance.

ENVIRONMENTAL

Meet or exceed applicable paragraphs of MIL-R-26E and MIL-R-39007.

*—Available in Noninductive (code symbol "X").

1 —Nominal, based on maximum 275°C. Hot spot at 25°C. Ambient. (char. U)
2 —Nominal, based on maximum 350°C. Hot spot at 25°C. Ambient. (char. Y)
3 —Tolerance for noninductive types below 150Ω ±.062.
4 —Noninductive maximum resistances are one-half of listed values.

WHEN ORDERING SPECIFY: TYPE, WATTAGE, RESISTANCE AND TOLERANCE.

POWER RESISTORS

OUTSTANDING FEATURES

1. Copperweld leads hot tin dipped for maximum solderability.
2. Completely welded construction terminal to terminal.
3. High density extruded aluminum housing provides superior heat conduction.
4. Housing deep finned for maximum heat dissipation under natural and forced convection.
5. Windings—High uniformity single layer space wound, designed to give maximum core coverage for even heat dissipation. MCX (non-inductive) types have dual balanced windings for minimum inductance.
6. Core—Steatite ceramic, centerless ground for uniformity.
7. Silicone coated resistance element to give maximum wire protection and extra high resistance to moisture.

ELECTRICAL CHARACTERISTICS

Tolerances—5.0% to .05%, 1% standard for off-shelf delivery.

Temperature Coefficient—20 ppm/degree C standard. Special T.C.'s to 5 ppm/degree C available.

Dielectric strength greater than 1000 V.A.C. on MC-100 and MC-250, and greater than 2000 V.A.C. on MC-500.

Dielectric Test—performed on 100% basis.

Stability—consistent with tolerances, all parts stabilized in production. Less than 0.5% drift in 1000 hours operation at full Cal-R wattage rating for 1% tolerance parts. Resistance ranges—.05 ohms to 210K ohms.

ENVIRONMENTAL

Meet or exceed all requirements of MIL-R-18546D, including "N" characteristic and MIL-R-39009.

OWER RESISTORS . . . Cont'd.

5 (5 WATTS) OUTSTANDING FEATURES

Copperweld leads hot tin dipped — Gold plated DUMET or "A" nickel available.
High density extruded aluminum housing provides superior heat conduction. Housing deep finned for maximum heat dissipation.
Windings — high uniformity single layer space wound, designed to give maximum core coverage for even heat dissipation. T5X (non-inductive) types have dual balanced windings for minimum inductance.
Core — Alumina ceramic, centerless ground for uniformity.

3 (3 WATTS) OUTSTANDING FEATURES

Windings — Reverse pie wound — all pies filled for maximum heat dissipation. Unique recessed end cap designed to isolate winding termination from all lead stress.
Protective overcoating covering entire resistor before molding insures maximum protection and secures winding without introducing stress.
Resistor element encased in nonburning epoxy by transfer molding techniques.
Copperweld leads hot tin dipped standard — Gold plated DUMET or "A" nickel available.

*200 VAC MAX.

T-5 ELECTRICAL CHARACTERISTICS

TOLERANCES: 5.0% to .05%. 1% standard for off-shelf delivery.
TEMPERATURE COEFFICIENT: 30 ppm/°C standard. Special T.C.'s to 5 ppm/°C available.
STABILITY: consistent with tolerances, all parts stabilized in production. Less than 0.5% drift in 1000 hours operation at full CAL-R wattage rating for 1% tolerance parts.
RESISTANCE RANGES: .5 ohms to 3 K ohms.
DIELECTRIC STRENGTH: greater than 500 V.A.C.
DIELECTRIC TEST: performed on 100% basis.

T-3 ELECTRICAL CHARACTERISTICS

TOLERANCE: 1 to .005% absolute. To .002% matching tolerance for matched sets.
TEMPERATURE COEFFICIENT: 10 ppm/°C is standard. Special TCs in ranges from +6000 ppm to 2 ppm/°C available.
STABILITY: consistent with tolerances. All parts stabilized in production, including 1% parts. Components available with stability of .002% per year.
WINDINGS: multiple pie reversed type to minimized inductance. Special windings available to provide fast rise times.
RESISTANCE: Ranges 3 K ohms to 300 K ohms.
MAXIMUM WORKING VOLTAGE: 200V.

PRECISION RESISTORS

OUTSTANDING FEATURES

1. All pies filled for maximum heat dissipation.
2. Unique recessed end cap designed to isolate winding termination from all lead stress.
3. Terminals welded to end cap for maximum strength — will withstand 15 lbs. linear pull.
4. Double slots tangent to mandrel to prevent shorting between pie windings eliminating space-wasting construction features or the need for insulating tape.
5. Protective overcoating covering entire resistor before molding insures maximum moisture protection and secures winding without introducing stress.
6. Standard leads — copperweld hot tin dipped or annealed Dumet gold plated.
7. Special matching available to .001% tolerance.

EECTRICAL CHARACTERISTICS

TOLERANCE: 1 to .005% absolute. To .002% matching tolerance for matched sets.

TEMPERATURE COEFFICIENT: 10 ppm/°C is standard. Special TCs in ranges from +6000 ppm to 2 ppm/°C available.

STABILITY: consistent with tolerances. All parts stabilized in production, including 1% parts. Components available with stability of .002% per year.

WINDINGS: multiple pie reversed type to minimized inductance (except on Miniature Series). Special windings available to provide low rise times.

RESISTANCE: Ranges 1 ohm to 10 megohms.

PHYSICAL CHARACTERISTICS

MATERIAL: Hi-Temp epoxy with matching coefficient of expansion between core and case. Leads are gold over Dumet.

ENVIRONMENTAL

Meet or exceed all requirements of MIL-R-93C and MIL-R-39005.

CAL-R PRECISION NETWORKS

Cal-R engineers, specialists in advanced network design, offer precision assemblies, packaged to meet the most exacting specifications, allowing the circuit designer maximum freedom without costly packaging problems.

GENERAL SPECIFICATIONS

RESISTOR VALUES: From 1 ohm thru 5 megohms
FULL SCALE ACCURACY: to .005%
TEMPERATURE COEFFICIENT TRACKING: to 1 PPM/°C.
TEMPERATURE COEFFICIENT ABSOLUTE: to 2 PPM/°C.
AMBIENT TEMPERATURE RANGE: —55°C to +125°C.
STANDARD TEMPERATURE COEFFICIENT: 0 to ±10 PPM.
STABILITY: to 10 PPM per year.
FAST RECOVERY TIME: to within .02% of final value within 100 ns.

POTENTIOMETER-RESISTOR NETWORK

670 SERIES

A potentiometer-resistor network for high voltage circuits where an adjustable pick-off is desired.

Resistance Range:
- R1—1-50 Megohms
- R2—1-30 Megohms
- R3—1-25 Megohms
- R4—1-10 Megohms

Standard Resistance Tolerance: ±30%

Minimum Resistance Tolerance:
- R1, R3 & R4—±10%
- R2 —±25%

Max. Voltage Rating—8000 V

Power Rating—3 watts @ 55°C

Mfg. at Elkhart

HIGH VOLTAGE RESISTOR

680 SERIES

High resistance, high voltage Cermide resistor available with and without taps. It is designed for bleeder resistor, voltage divider networks and other high voltage applications.

Resistance Range:
20K Ohms to 1,000 Megohms

Standard Resistance Tolerance—±30%

Minimum Resistance Tolerance—±10%

Max. Voltage Rating—30,000 V

Power Rating—3.5 watts @ 55°C

Mfg. at Elkhart

PRECISION FILM RESISTORS, WIRE-WOUND POTENTIOMETERS AND AUTOMOTIVE SPARK SUPPRESSORS

Precision Metal Film Resistors

PRODUCT REFERENCE CHART — MIL R 10509

GENERAL SPECIFICATIONS

SERIES	DESCRIPTION	CW Type	MIL Style	MIL Char.	Wattage Rating 70°C	Wattage Rating 125°C	Resistance Min.	Resistance Max.
 X	Vacuumette type "X" series are conformal coated, evaporated metal film resistors designed for higher performance and stability, identified by a reddish-brown color of E-coating. In addition to standard temperature coefficients per MIL characteristics, they are available with T.C. of ±100 PPM (EIA Code T1). QPL approved per MIL R 10509	X55	RN55	D, C, E	⅛	1/10	10Ω	301K
		X60	RN60	D, C, E	¼	⅛	10Ω	1 Meg.
		X65	RN65	D, C, E	½	¼	10Ω	2 Meg.
VFM	VFM series are molded resistors, with more types in the higher wattages than Series "X," and made by the same rigid manufacturing methods. They are identified by a tan color molded jacket providing greater mechanical protection and will sustain rough handling. QPL approved per MIL R 10509	VFM05	RN60	D, C, E	¼	⅛	10Ω	1 Meg.
		VFM10	RN65	D, C, E	½	¼	10Ω	2 Meg.
		VFM15	RN70	D, C, E	¾	½	10Ω	2.49 Meg.
		VFM25	RN75	B	1	1	10Ω	5.11 Meg.
 VF*	VF series trim line resistors are offered as a multi-rated, multi-purpose conformally coated metal film. Smaller than MIL type, they provide the same maximum performance capabilities at a lower cost. Units are coded similar to "X" series, but are identified by standard commercial marking.	VF05	—	—		⅛	10Ω	1 Meg.
		VF11	—	—		¼	10Ω	2 Meg.
		VF15	RN20	X		½	10Ω	2.5 Meg.
		VF25	RN25	X		1	10Ω	5 Meg.
NA	Noblette type NA series are metal film resistors with the advantage of extreme high and low resistance values in varying wattages. Values are obtained by application of "noble" metals through a C-W developed pyro-chemic process. Film is protected by a layer of vitreous enamel and a rubberized, charcoal gray enamel paint. Axial lead construction.	NA15	—	—	½w @ 40°C		0.5Ω	3 Meg.
		NA20	—	—	½w @ 40°C		0.5Ω	3 Meg.
		NA25	—	—	1w @ 40°C		0.5Ω	5 Meg.
		NA30	—	—	2w @ 40°C		1.0Ω	10 Meg.
NR	Nobeloy type NR resistors are similar in composition and appearance to NA series, except that they have radial lead construction. Resistor body is in tube form, permitting additional mounting by means of a thru-bolt. They also offer higher and lower resistance value in varying wattages from ½W to 5W.	NR20	—	—	½w @ 40°C		0.5Ω	3 Meg.
		NR25	—	—	1w @ 40°C		0.5Ω	5 Meg.
		NR30	—	—	2w @ 40°C		1.0Ω	10 Meg.
		NR50	—	—	5w @ 40°C		2.0Ω	10 Meg.

NOTE: *Available in T.C., T1, T2, T9.

¾" DIAMETER WIRE-WOUND CONTROLS

Electrical circuit choice of potentiometer, rheostat, or fader up to 10,000 ohms resistance. Power dissipation to 3.0 watts with anticipated life of 10,000 cycles. Available with grounded or insulated rotor and plastic or metal shafts. Choice of mounting style: bushing (illustrated), eyelet-to-chassis, twist tab, or snap-in ears to printed circuit board. Request Bulletin No. 2080-67.

1⅛" DIAMETER WIRE-WOUND CONTROLS

Resistance range to 25,000 ohms. Available as potentiometer, rheostat, or "L" pad. Up to 5.0 watts power dissipation with anticipated life to 25,000 cycles. Available with insulated rotor and choice of bushing or twist-tab mount. Bushing and shaft dimensions available to meet your specific requirements. Request Bulletin No. 2060

AUTOMOTIVE and OIL BURNER SPARK SUPPRESSORS

For suppression of radio and television noise interference due to ignition spark discharge at plugs and high tension distributor; and due to ignition discharge action of oil burner igniting coil. Complete line of resistive type suppressors. Request Bulletin 125.

C-W products assure high reliability at reasonable prices. Full cooperation on custom engineering, field service, emergency stocking and special models.

See Sec. 5100 for complete line of C-W Slide-Switches.

CONTINENTAL-WIRT ELECTRONICS CORP.
26 W. QUEEN LANE, PHILADELPHIA, PA. 19144

ASS AND METAL OXIDE FILM RESISTORS

rfect combination to handle resistor jobs

pendable resistor performance, tailored to specific circuit uirements results from CORNING® Materials and cess skills.

gh resistivity tin oxide film is combined with optical ality glass substrate yielding exceptionally strong, uni- m resistance components.

is construction is the basic reason for the proven sta- lity and reliability demonstrated in the 100,000 hour test ta summarized at right.

0,000 TOTAL TEST HOUR DATA DEMONSTRATES LONG TERM ABILITY RESULTING FROM THIS UNIQUE CONSTRUCTION.

Extended load life performance, 150 CORNING Tin Oxide Resistors

For Optimum Value in Resistors... DALE®

WIREWOUND PRECISION RESISTORS, ESTABLISHED RELIABILITY

■ TYPE ARS*

Failure rate .000136% per 1000 hours at 50% rated power, 25°C ambient (60% confidence level). Failure defined as ΔR>0.5%.

■ TYPE AGS*

Miniature version of ARS Series with BeO core for optimum thermal conductivity, operational stability and increased reliability. Significantly smaller size. Failure rate .000044% per 1000 hours at 50% rated power, 25°C ambient (60% confidence level). Failure defined as ΔR>0.5%.

*Available with solderable and weldable leads.

Tolerance: All established reliability resistors have a standard resistance tolerance of 1%.

POWER RATING

Dale ARS and AGS power ratings are based on the following two conditions:
1. 0.5% maximum ΔR in 2000 hours load life. 2. 275°C maximum operating temperature.

■ TYPE ARH

Advanced design housed power wirewounds made on the same line and under the same high reliability standards as the ARS and AGS. Failure rate of .1% at 100% rated power.

DERATING ARS, AGS, ARH

Established reliability data is based on operation at 50% rated power at 25°C. At high ambient temperatures, the derating curve at right applies:

DALE TYPE	MIL-R-39009A TYPE	POWER RATING (watts) MTD.	POWER RATING (watts) FREE AIR	RESISTANCE RANGES (ohms) MIN.	RESISTANCE RANGES (ohms) MAX.	MAX. WORKING VOLTAGE	MAX. WT. GRAMS
ARH-5	RER-60	5	3	.1	4.12K	220	3
ARH-10	RER-65	10	6	.1	5.62K	340	8
ARH-25	RER-70	20	8	.1	12.1K	650	15
ARH-50	RER-75	30	10	1.0	39.2K	1400	32

Tolerance: All established reliability resistors have a standard resistance tolerance of 1%. Non-inductive versions also available.

DIMENSIONS: See section on RH resistors. Types ARH-5 thru 50 will correspond with RH-5 thru 50.

POWER RATING

Dale ARH resistor ratings are based on the following requirements:
1. 275° maximum internal hotspot temperature
2. 1% maximum ΔR in 2000 hour load life
3. Proper heat sink
   4x6x2x.040 aluminum chassis = ARH-5 and ARH-10
   5x7x2x.040 aluminum chassis = ARH-25 and ARH-50

■ TYPE AWA

Established reliability epoxy-molded precision bobbin wirewound resistor with high stability and low T.C.; offers excellent moisture protection and low noise. Quality verified by acceptance testing.

DERATING

Dale AWA resistors have an operating temperature range of −55°C to +145°C. Derating is required for temperatures above 125°C. The curve at right applies.

DALE TYPE	MIL-R-39005B TYPE	POWER RATING (Watts)	MINIMUM RESISTANCE RANGE (Ohms) .01%	.02%	.05%	.1%	1%	MAX. RES. (Ohms) ALL TOL.	MAX. WORKING VOLTAGE	MAX. WT. (Grams)

AWA-52	RBR-52	.50	10	10	10	10	.1	1.21 Meg.	600	3.8

POWER RATING

Dale AWA power ratings are based on the following two conditions:
1. 1% maximum ΔR in 2000 hours load life.
2. 125°C maximum operating temperature.

DIMENSIONS:

See section on WWA resistors. Dimensions on Types RBR-52 thru RBR-55 will conform to Types RB-52 thru RB-55.

METAL FILM PRECISION RESISTORS, ESTABLISHED RELIABILITY

■ TYPE EMF

Failure Rate: Verified Failure Rate of .1% per 1000 hours at 60% confidence level. Estimated Failure Rate: .01% per 1000 hours. Failure Rate Goal: .001% per 1000 hours.

DERATING

Dale EMF resistors have an operating temperature range of −65°C to +175° C. They must be derated according to the curve at right.

DALE TYPE	MIL. TYPE	125°C RATING	MAX. WEIGHT (GRAMS)	MAX. WORKING VOLTAGE	RESISTANCE RANGE (OHMS) T-1 (K)	T-2 (H)	T-9 (J)
EMF 50	RNR50-RNC50	1/20 W	.11	200	49.9 to 100K	49.9 to 100K	49.9 to 100K
EMF 55	RNR55-RNC55	1/10 W	.35	200	30.1 to 301K	49.9 to 200K	49.9 to 200K
EMF 60	RNR60-RNC60	1/8 W	.45	250	24.9 to 1 Meg.	49.9 to 499K	49.9 to 499K
EMF 65	RNR65-RNC65	1/4 W	.84	300	24.9 to 2 Meg.	499 to 1 Meg.	499 to 1 Meg.
EMF 70	RNR70-RNC70	1/2 W	1.6	350	24.9 to 2.49 Meg.	24.9 to 1 Meg.	24.9 to 1 Meg.
EMF 75	– –	1 W	4.4	500	24.9 to 4.07 Meg	49.9 to 2.61 Meg	49.9 to 2.61 Meg.

Standard Resistance Tolerances: .1% (B), .25%, .5% (D) and 1% (F).

DIMENSIONS

See section on MF resistors. Dimensions on Types RNR50-RNC50 thru RNR70 – RNC70 will conform to Types RN-50 thru RN-70. Note: EMF-75 conforms to RN-75.

POWER RATING

Dale EMF power ratings are based on the following two conditions:
1. 0.5% maximum ΔR in 2000 hours load life.
2. 175°C maximum operating temperature.

DALE for Optimum Value in Wirewound Resistors

WIREWOUND PRECISION RESISTORS, ESTABLISHED RELIABILITY

(M FAILURE RATE)

TYPE ESS (Solderable Leads)
TYPE ESW (Weldable Leads)

TYPE EGS (Solderable Leads)
TYPE EGW (Weldable Leads)

These styles meet the requirements of MIL-R-39007 Failure Rate Level M (1%/1000 hours). See ARS and AGS for lower failure rates.

POWER RATING

Power ratings are based on the following two conditions:

1. 1% maximum ΔR in 1000 hours load life.
2. 275° C maximum operating temperature.

Tolerance: All established reliability resistors have a standard resistance tolerance of 1%.

DIMENSIONS

TYPE ERH (Inductive Winding)
TYPE ENH (Non-inductive Winding)

Meet the requirements of MIL-R-39009 Failure Rate Level M (1%/1000 hours). See ARH for lower failure rates.

POWER RATING

Dale ERH and ENH resistor ratings are based on the following requirements:

1. 275° C maximum internal hotspot temperature
2. 1% maximum ΔR in 2000 hour load life
3. Proper heat sink

4x6x2x.040 aluminum chassis = ERH-5 & ERH-10
5x7x2x.040 aluminum chassis = ERH-25 & ERH-50

Tolerance: All established reliability resistors have a standard resistance tolerance of 1%. Non-inductive versions also available.

DIMENSIONS

See section on RH resistors. Types ENH and ERH-5 thru 50 will correspond with RH-5 thru 50.

DERATING
ESS, ESW, EGS, EGW, ERH, ENH

Established reliability data is based on operation at 50% rated power at 25° C. At high ambient temperatures, the derating curve at right applies.

DOCUMENTATION

Qualification, acceptance and failure-rate maintenance test data is retained by Dale and is available upon request. Lot traceability and identification data is maintained by Dale for 5 years.

RELIABILITY PROGRAMS

The established reliability series are the result of an extensive reliability program at Dale Electronics which includes basic design and materials improvement, special production and test facilities, and trained, reliability-oriented personnel. A separate program group has been set up to provide customer service on established reliability programs, and the facilities and know-how of the Dale established reliability organization can be directed toward the development of reliability programs for specific user requirements. Inquiries may be directed to your local Dale representative or to the factory.

DALE® for Optimum Value in Wirewound Resistors

WIREWOUND PRECISION RESISTORS, SILICONE COATED OR MOLDED

(Available with Weldable Leads)

■ TYPE RS

Meets applicable requirements of MIL-R-26E, MIL-R-26C and MIL-R-23379. Non-inductive styles available.

■ TYPE RLS

Radial leads for printed circuit board mounting. Meets applicable requirements of MIL-R-26E. Non-inductive styles available.

POWER RATINGS RS, RLS, G SERIES

These Series have two power ratings, depending on operating temperature and stability requirements.

CHARACTERISTIC U: 1. 275°C maximum hotspot temperature
2. .5% maximum ΔR in 2000 hour load life

CHARACTERISTIC V: 1. 350°C maximum hotspot temperature
2. 3% maximum ΔR in 2000 hour load life

DERATING RS, RLS, G

RS, RLS and G coated resistors have an operating temperature range of −55°C to +350°C. Dale RS molded resistors have an operating temperature range of −55°C to +275°C. They must be derated at high ambient temperatures according to the curves below.

POWER RATING
Power ratings of Dale G resistors are 1.4 to 4 times higher than those of conventional wirewound resistors of equivalent size.

Stability When Dale G resistors are operated at the same ratings (Char. U) as conventional Dale RS resistors of equivalent size, the shift in resistance is 50% or less than that of the RS.

For additional power and derating information, see section on RS resistors.

WIREWOUND POWER RESISTORS, HEAT SINK ENCASED

■ TYPE PH

TWO TERMINAL CONFIGURATIONS (PH-10-1, PH-25, PH-50 and PH-100). Thru chassis mounting—two connections required on one or both sides of panel. Meet electrical and environmental requirements of MIL-R-18546.

SINGLE TERMINATION, CHASSIS GROUND (PH-10-5 and PH-25-8). Speeds assembly time as only one connection is required. Often utilized as a drive line resistor in a high speed core memory system using a series termination technique. Non-inductive windings have low reactance properties giving exceptionally fast cycle time.

For additional power and derating information, see section on RH resistors

DALE®

for Optimum Value in Housed Wirewound Resistors

WIREWOUND POWER RESISTORS, HEAT SINK ENCASED

Patented design. Mount to the chassis. Provide high power and precision tolerance in a variety of sizes, mounting and terminal configurations. RH and HG types exceed MIL-R-18546. Non-inductive styles available.

■ TYPE RH

5 through 250 watts. Bonus power dissipation ability within MIL-R-18546 size.

■ TYPE HG

Beryllium oxide core for optimum heat dissipation. Doubles Mil. Spec. power at no increase in size. Exceptional stability at mil. levels.

*Rating is based on chassis mounting area and stability. For MIL-R-39009 ratings, see section on ARH resistors.

**NOTE: Figures in parentheses on RH-5 and RH-10 indicate wattage printed on these resistors. New construction allows them to be rated at 7.5 and 12.5 watts – but they will be printed with these higher ratings only upon customer request.

†A weight increase of 10% should be allowed for non-inductive styles.

††Consult factory for values below 1 ohm and for special T.C. requirements.

POWER RATING RH, HG, PH TYPES

Dale housed resistor ratings are based on the following requirements:

1. 275°C maximum internal hotspot temperature
2. 1% maximum ΔR in 1000 hour load life for RH-5, 10, 25, 50; PH-10, 25, 50. 3% maximum ΔR in 1000 hour load life for RH-100, 250; PH-100.
3. Proper heat sink.
   4x6x2x.040 aluminum chassis = RH-5, 10; HG-5, 10; PH-10
   5x7x2x.040 aluminum chassis = RH-25; HG-25, 50; PH-25
   12x12x.059 aluminum panel = RH-50
   12x12x.125 aluminum panel = RH-100, 250; PH-50, 100

5 THRU 50 WATT MODELS, ARH, RH & HG

DERATING

Dale housed resistors have an operating temperature range of −55°C to +275°C. Derating is required for reduced chassis mounting area and for high ambient temperatures. The following curves apply to operation of unmounted resistors:

A = RH-5, 10
B = RH-25; PH-10, 25
C = RH-50, 100, 250; PH-50, 100; HG-5, 10, 25, 50

RH-100

RH-250

DALE® for Optimum Value in Bobbin Wirewound Resistors

WIREWOUND PRECISION RESISTORS, BOBBIN TYPE *(Available with Weldable Leads)*

Non-inductive precision resistors. Epoxy molded for high dielectric strength and complete environmental protection. Meet applicable requirements of MIL-R-93D.

TYPE WWA

Patented design insures high stability. Special tolerances and matching available.

TYPE MWA

Subminiature size retains Dale's unique bobbin-type design and high protection molding coating.

DALE TYPE	MIL-R-93 TYPE	POWER RATING (WATTS)	MINIMUM RESISTANCE RANGE (OHMS)*					MAXIMUM RESISTANCE (OHMS) ALL TOLERANCES	MAXIMUM WORKING VOLTAGE	MAXIMUM WEIGHT (GRAMS)

*Consult factory for tolerances below .05%.

†Although there is no direct mil. model of the same physical size, the Dale type will meet the electrical and environmental requirements of MIL-R-93.

SPECIAL MODIFICATIONS

- Special tolerances are available to as low as .005%.
- Resistors can be matched to a tolerance of .001%.
- Special T.C.'s are available to ±2 ppm/° C over a limited temperature range.
- T.C.'s can be matched to an accuracy of 1 ppm/° C.

POWER RATING

MWA, WWA and WWP power ratings correspond to MIL-R-93 ratings and are based on .5% maximum ΔR in 1500 hours load life. For commercial applications, power ratings may be doubled.

DERATING

Dale MWA, WWA and WWP resistors have an operating temperature range of −55° C to +145° C. Derating is required for temperatures above 125° C. The curve at right applies.

DIMENSIONS

TYPE	DIM. A	DIM. B	DIM. C	DIM. D

DALE® for Optimum Value in Wirewound Resistors

INDUSTRIAL WIREWOUND POWER RESISTORS, SILICONE OR VITREOUS ENAMEL COATED

Dale's expanded industrial wirewound line provides both silicone and vitreous coated models. Silicone models are recommended where maintenance of tolerance and T.C. is of primary concern. Vitreous models are recommended where maximum resistance to chemical action is required.

CONTACT DISTRIBUTOR FOR PRICES.

TYPE	APPLICATION	APPLICABLE MIL SPEC AND TYPES	WATTAGE RATING	RESISTANCE RANGE	CORE SIZES	TERMINALS	MOUNTINGS	TOLERANCE

HLT, VLT Tapped	For voltage divider networks	MIL-R-26 RW-22, 23, 24, 33, 35, 36, 37, 38, 47	11-225 watts	.1 ohm to 1.1 Megohms	O.D. 5/16 to 1-1/8" Length 1½ to 10½"	Lugs	Push-in bracket or thru bolt	±10% each section (±10% total)
HLW, VLW Tubular	General application where terminal wires are required for direct electrical connection	None	3-20 watts	.1 ohm to 80K ohms	O.D. 13/64 to 7/16" Length 1" to 2"	Lugs with terminal wires	Terminals, thru bolt or push-in bracket	±5% (10% below 1ohm)
HLZ Edge-wound	For heavy duty requirements where space is at a premium. High thermal capacity.	None	35-375 watts	.05 ohm to 32 ohms	O.D. 1/4 to 1-1/8" Length 1 to 10-1/2"	Lugs	Push-in bracket or thru bolt	±10%

MOUNTING BRACKETS for TUBULAR STYLES

EXCLUSIVE BRACKET DESIGN FOR MINIATURE FLAT STYLE

Mounting strap fits snugly through core and is bound tightly against unit by two eccentric spacers. Eliminates expensive cements and improves heat transfer and power handling capabilities.

DALE for Optimum Value in Power Wirewound Resistors

TYPE CP

- Fireproof inorganic construction
- Special inorganic molding compound provides high thermal conductivity
- Superior moisture and thermal resistance

Construction: Resistance wire is high quality, premium grade wound onto a woven fiberglass core. Terminals are tinned copperweld crimped to the wound core with a special brass alloy.

Tolerance: ±10% standard. ±5% also available.

Operating Temperature: −55° C to +275° C.

Temperature Coefficient: Below 1 ohm 0 ±400 PPM (TYP.). Above 1 ohm 0 ±200 PPM (TYP.).

Terminal Strength: 5 lbs. minimum.

DALE TYPE	WATTAGE RATING	EIA STANDARD RS-344 TYPE	RESISTANCE	MAX. WORKING VOLTAGE	DIMENSIONS A±1/32	B±1/32	C±1/32	D±.001

DERATING

Ordering Information:

When ordering, please specify Dale type, wattage, resistance value and tolerance.

Example: A 2-watt CP resistor with resistance at 1000 ohms and tolerance of ±10% is designated as shown.

CP	2	1K	±10%
1	2	3	4

1. Resistor type
2. Wattage
3. Resistance
4. Tolerance

TYPES CA and CR

TYPE CA

TYPE CR

Construction:

Dale CA and CR Series have a high quality, premium resistance wire wound on woven fibreglass core impregnated and coated with a special grade silicone. Available with special smokeproof coating for moisture protection.

Resistance Range: .1 ohm minimum to 7K, dependent on resistor core length.

Tolerance: ±10% standard, ±5% also available.

Leads: Standard lead diameter is .036" (#19 AWG). .032" diameter (#20 AWG) is also available. Standard minimum lead length is 1½". Standard lead material is tinned copperweld. Axial lead pull strength on CA Series is 4 lbs. minimum.

DERATING

FOR HIGH AMBIENT TEMPERATURE (NEMA)

Ordering Information:

When ordering, please specify resistor body length, watts/inch, resistance and tolerance.

Example: A 1½" unit, 5 watts per inch; 350 ohms, ±10% radial lead unit is designated as shown.

CR	5	150	350Ω	±10%
1	2	3	4	5

1. Resistor type
2. Core diameter designation
3. Overall resistor body length
4. Resistance
5. Tolerance

TYPE RF FUSE RESISTOR

Dale RF resistors can reliably function as a fuse and as a wirewound resistor. RF resistors are similar in appearance to Type CA, CP or CR models, but are wound with special wire conforming to performance required. Contact factory for design assistance.

TYPES CL and CLC

TYPE CL

TYPE CLC

- Recessed core prevents resistance wire protrusion.
- Lugs are double-crimped for positive electrical contact and high terminal pull strength.
- Any variation of mounting hole and slot available.

Construction, Resistance Range, Tolerance and Derating same as CA.

Resistance Identification: Resistance is always stamped on the left terminal tab in two places.

Terminals: (CL Series) Mounting holes as shown are Dale standard. Any variation of hole and slot is available, also tabs with no holes are available. Standard terminal material is tin plated steel. Special tinned brass is available on request.

Ordering Information: Same as CA except (3) 3. Mounting length between centers.

CL-4000 SERIES - 4½ watts per inch

CL-6000 SERIES - 6 watts per inch

DIMENSIONS

	CL-4000	CL-6000

Left Terminal	.133" dia.	.215" dia.
Right Terminal	.133" x .153" slot	.215" dia.

Other terminal dimensional variations available on request.

CLC-4000 SERIES - 4½ watts per inch (Printed Circuit Tab)

DALE® for Optimum Value in Metal Film Resistors

PRECISION METAL FILM RESISTORS *(Available with Weldable Leads)*

Vacuum-deposited metal film resistors. Meet both MIL-R-10509 and MIL-R-22684. Good R.F. characteristics. Low noise level. Wide choice of tolerances and T.C.'s.

■ TYPE MF

Epoxy molded. Meets MIL-R-10509 and MIL-R-22684.

■ TYPE MFF

Epoxy conformal coated. Meets electrical and environmental characteristics of MIL-R-10509F, but is dimensionally smaller.

EXTENDED RANGE MODELS

Type LMF (values down to 1 ohm) and Type HMF (values up to 50 Megohms). Identical to Type MF in construction and other performance features.

POWER RATING

Dale MF resistors have two power ratings, depending on operating temperatures of 70° C and 125° C. MFF resistor power ratings are based on full power at 125° C. All are based on a maximum ΔR of .5% in 1000 hour load life.

DERATING

Dale MF resistors have an operating temperature range of −65° C to +175° C. They must be derated according to the curves at right.

DALE® for Optimum Value in Carbon Film Resistors

EPOSITED CARBON RESISTORS *(Available with Weldable Leads)*

esigned for inherent stability, long load life and excellent protection against nvironmental factors in a wide range of applications. Made of pure crystalline arbon film bonded to selected ceramic cores. Excellent high frequency characteristics. ypes DC and MC meet functional requirements of MIL-R-10509F.

TYPE MC

olded housing. Completely insulated and protected against nvironmental or mechanical damage. Specially formulated olding compound gives best humidity protection available.

TYPE DC

pecially coated for complete insulation against moisture, alt spray and other severe environmental factors. Miniature size.

POWER RATING
Dale MC and DC power ratings are based on 1% maximum ΔR in 1000 hours load life at 70° C.

DERATING
Dale MC and DC resistors have an operating temperature range of −55° C to +165° C. They must be derated at high ambient temperatures according to the curve.

DAVEN Precision Wire Wound Resistors & Networks

Non-magnetic, radiation-resistant, tolerances from ±.002% to ±1.0%.

LEAD TYPES: Axial wire, radial wire, printed circuit wire, radial lug, printed circuit lug, plus many wire lead materials and platings.

385 STYLES: Epoxy, varnish or silicone coated, metal encased, solder sealed.

SIZES: From .1″ dia. x .235″ long to ⅞″ dia. x 2⅛″ long.

OHMIC RANGE: 1 milliohm to 25 megohms.

TOLERANCE (production basis): Absolute — down to & including ±.002%. Matched — down to & including ±.001%.

TEMP. COEF.: ±1 PPM/°C to +6000 PPM/°C.

STABILITY: Down to 0±20 PPM for 3 yrs.

RISE TIME: Down to .05 μsec. POWER: .03 watts to 10 watts. VOLTAGE: 1000v to 2000v.

THERMAL EMF: Down to 2.5 μv/°C.

NOISE: Down to thermal noise level.

MIL SPECS: Meet or exceed MIL-R-93 & MIL-R-39005-MIL-R-26 or MIL-R-39007 as applicable.

HIGHEST RELIABILITY with over 20 million test hours certified failure rate of .01% per 1000 hrs. based on full power @ 125°C. In almost every major missile/hi-reliability program.

TYPE SP 	Silicone coated precision wire-wound power resistors, offering exceptional stability and performance under severe environmental conditions. Also available utilizing Beryllium oxide cores. For greater power-size ratio and stability. Request SP Bulletin	RW-70 RW-69 RW-79 RW-74 RW-55 RW-78 RW-68 RW-56	SP-1 SP-2A SP-5 SP-6 SP-7A SP-10A SP-10B SP-12	Power: .25W to 12.5W Range: .1Ω to 275KΩ depending on size Tolerance: 1% is std. Available to .01% Temp. Coef.: 20 PPM/°C. Slightly higher for lower values. Special T.C.'s available
NETWORKS	Resistor networks to customer specification utilizing ultra precision wire-wound, metal film, carbon film, or wire-wound power resistors. All circuits assembled on printed circuit boards. FAST DELIVERY ON PROTOTYPE AND LARGE ORDERS			Power: .1W to 10W Range: .1Ω to 5MΩ Nominal Resistance Tolerance: To ±.005% D.C. W-W Resistance Ratio Tolerance: To .001% D.C. W-W Long Term Stability: .001% Response Time: 100MS
CURRENT SHUNTS	Standard D.C. current shunts from .001Ω to 1Ω. Accuracy ±.25%, available to .01%. Also external portable and switchboard shunts for use with D.C. Ammeters. 1 to 200 amp. with a 50MV drop. Accuracy ±1%. SPECIAL OEM CURRENT SHUNT RANGING FOR PANEL METERS			**METER SHUNTS** HIGH VOLTAGE DIVIDERS 	100KV high voltage divider with ratio accuracy of ±.05% at 100,000 to 1. The divider can be used for A.C. (at 60HTz only) measurements to 1% accuracy. Also available are high voltage divider networks utilizing wire-wound carbon, or metal film resistors to customer specification.			**HIGH VOLTAGE NETWORKS**

PRECISION WIRE WOUND RESISTORS & NETWORKS

Charles T. Gamble Industries has engineered and designed non-inductive precision wire wound resistors to meet the requirements of Mil-R-93D. These resistors are completely sealed against the effects of high humidity and salt water immersion cycling. The material used in the manufacture of our resistors has a very high dielectric strength. The bobbin material used in winding the resistors is one and the same as the encapsulating material. All resistors use resistance wire with very low thermal E.M.F. to the copper leads. Where thermal effects can be disregarded, welded construction with nickel alloy leads may be specified.

Standard temperature coeficient is ±10 PPM/°C. Lower T.C.'s, and T.C.'s as high as 6000 PPM/°C can be supplied.

Tolerance available (non power styles): 1%, 0.5%, 0.1%, 0.05%, 0.025%, 0.02% and 0.01%. Resistors with tolerances of 0.1% and below are stabilized by artificial aging and temperature cycling.

NETWORKS: RC NETWORKS, LADDER NETWORKS, VOLTAGE DIVIDERS, BINARY NETWORKS

Sub-miniature Axial lead Precision resistors have been designed for applications where space is a prime factor.

Encapsulated printed circuit resistors are designed for printed circuit board application, where space is a factor.

Radial lug type resistors have been designed to meet the requirements of Mil-R-93D.

All resistors are hermetically sealed with epoxy resin to protect the windings against the effects of high humidity and salt water immersion cycling. Resistors can either be inductive or non-inductive wound.

The materials used in the construction of radial lug type resistors are identical to those used in the construction of axial lead types.

These resistors are supplied with a thru hole for mounting to the chassis by means of a #6 thru bolt.

HEAT SINK MOUNTED PRECISION WIREWOUND POWER RESISTORS

POWER RATING	DIMENSIONS A	B	C	D	MAXIMUM OHMS
10 WATT	.562	.625	.750	.390	20,000
25 WATT	.718	.781	1.062	.542	60,000
50 WATT	1.563	.844	1.968	.610	70,000

Ratings shown are based upon use of appropriate chassis mounting.

ECONISTORS
PRECISION WIREWOUND RESISTORS

ECONISTORS: TO ±0.005%, LOW COST, IMMEDIATE SHIPMENT FROM STOCK

ECONISTORS represent a price and delivery breakthrough in precision wirewound resistor manufacture. While in every important particular equivalent to high-accuracy components costing several times as much, ECONISTORS are available at prices comparable to, for example, thick film resistors while these cannot compare with ECONISTORS in terms of accuracy, stability, load life and hysteresis.

NOW IN STOCK IN QUANTITY ON BOTH EAST AND WEST COASTS, ECONISTORS will be shipped in any quantity of any standard value within 72 hours after an order is received.

CONDENSED SPECIFICATIONS

Ohmic Values: See following charts
Accuracy: (@ 25°C)±.005% / .01% / .025% / 0.1%
T.C.: ±5 PPM/°C, max., —55°C to +125°C
±3 PPM/°C, typical, 0°C to +85°C
Stability: ±35 PPM/year; ±50 PPM, 3 years
Power Rating (+125°C): 0.25 watt
(+85°C): 0.33 watt
Max. Voltage: 200 VDC or AC peak
Dimensions (8E16): 0.25" OD x 0.5" lg (values below 700K)
(8E24): 0.25" OD x 0.75" lg (values above 700K)
Leads: Axial wire; #22AWG tinned copper; 1.5" lg, min.

JULIE RESISTORS

Julie evanohm resistors, acknowledged to be the most stable available anywhere, are offered in a wide variety of styles and sizes. The table below lists some of the more common specifications that the user must know in order to make a practical selection for his application. The Julie engineering staff is always pleased to assist in selecting the proper resistors and is able and willing to assist in designing special purpose or custom resistors. Further technical information is available upon request.

Type Description	Range Resistors	Range Ratios	Accuracy (%) Resistors	Accuracy (%) Ratios	Stability %/year	Temp. Coefficient PPM/°C Resistors	Temp. Coefficient PPM/°C Ratios	Self Heating PPM/Watt	Voltage (Volts)	Current/Power	Size	Remarks	Price** per one
NB-1 Ultra Stable oil immersed resistors	0.1 ohm - 10 meg	up to 10^6:1	.0015 1 K to 1 meg	.0005 (near 1:1)	Resistors: .0015 Ratios: .0005	5 (25 available)	2 (0.5 available)	10	200 v Between Terminals	Allow for rise of temp. of 10°C/watt	1⅛" dia. 1¾"-5⅝" long	NBS Certifiable 4-term for 3 K ohms and lower	$35-$150
CH and CH-T4 Compact oil-filled Resistors	0.1 ohm - 5 meg	1:1 - 10^6:1	.005	.002 - .1	.002 (2T) .003 (4T)	5 (1.0 available)	2.5 (0.7 available)	20	300 across Terminals 500 to case	up to 2 amp	⅜"-½" dia. ½"-2" long	Style CH offers minimum and/or matched phase shift. Two or four terminals available.	$10-$50
L Radial Lug Encapsulated Resistor	1 ohm - 10 meg	See GL	.01 100 ohm - 5 meg	.003 - .1	.003 Standard Ranges	5 (1.0 available)	2.5 (0.7 available)	30	125-300 Depending on size	to 300 v to 2 amps. to 2 Watts	⅝"-1" dia. 9/16"-2 1/32" long	High performance under Military environment. Equivalent to Mil Resistors RB 16, 17, 18, and 19	$7.50-$20
H Low Reactance Encapsulated Precision Resistors	1 ohm - 5 meg	1:1 - 10^4:1	.01 100 ohm - 5 meg	.005 (near 1:1)	.003 Standard Ranges	5 (1.0 available)	2.5 (0.7 available)	30	0-1000 Depending on size	to 1000 v to 2 amps. to 2 Watts	⅜"-½" dia. ½"-2" long axial leads	Features a low-reactance construction and fast time constant for AC application	$6.50-$35
HS Special low Reactance Encapsulated Radial Resistors	10 ohm - 1 meg	1:1 - 10^6:1	.0025	.001	.0025	5 (.5 - 2.5 available)	.1	25	0-1000 Depending on size	0-1000 v	⅜"-½" dia. ½"-2" long	A highly accurate resistor for exceptionally low reactance applications	$10-$50
XG and XG-T4 Radial lead Encapsulated Resistors	0.1 ohm - 10 meg	1:1 - 10^6:1	.01 2 ohm - - 5 meg	.005 (near 1:1)	.003	5 (1.0 available)	2.5 (0.7 available)	30	0-1000 Depending on size	to 250 v (100 v on special order) to 2 amps. to 2 Watts	⅜"-⅝" dia. 9/16"-2½" long	A mass produced resistor with high uniformity and reliability. Two or four terminals available.	$5-40
R and R-T4 Axial lead Compact Encapsulated Resistors	0.1 ohm - 10 meg	1:1 - 10^4:1	.01 1 ohm-.5 meg	.005 (near 1:1)	.003	5 (1.0 available)	2.5 (0.7 available)	30	0-1000 Depending on size	to 250 v (1000 v on special order) to 2 amps. to 2 amps.	¼"-½" dia. 9/16"-2" long	Special characteristics are readily providable. Four terminal R-T4 provides extremely low reactance values	$4-25
RS Top Hat Encapsulated Precision Resistors for PC Boards	1 ohm - 750 K ohms	1:1 - 10^6:1	.0025	.002	.003	5 (1.0 available)	2.5 (0.7 available)	30	0-1000 Depending on size	¼ watt	13/32" dia. ½" long	Economical and efficient for use in original equipment manufacture	$4-20
GL Group Encapsulated Precision Resistors Radial-lead or Radial lug Terminal	1 ohm - 5 meg	1:1 - 10^4:1	.01 100 ohm - 5 meg (available to .0025)	.005 (near 1:1)	.003	5 (1.0 available)	2.5 (0.7 available)	30	0-1000 Depending on size	to 300 v to 2 amps. 1 watt/per section	5/16"-⅝" dia. (length depends on requirement)	Two - ten resistors per string, depending on resistance requirement. Available in radial lug and axial wire leads and as low reactance type HGL.	$10-20
PLUG-IN Resistors	1 ohm - 2 meg	See Type L for Additonal Specifications									1 11/16 high 15/16" wide 21/32" deep	Banana plug terminals fit any standard insulated universal post with ⅜" spacing between centers.	$10-150
PC Miniature (Low Profile) Oil Filled Resistors for Printed Circuits	0.1 ohm - 2 meg	1:1 - 10^6:1	.005 1000 ohms - 1 meg	.0025 (near 1:1)	.002	5	2.5 (0.5 available)	20	0-300 Depending on size	to 300 v to 2 Amps. 1 watt	1 3/16" long 57/64" wide ½" seated height	Case may be grounded or floated or guarded Low reactance type HPC also available.	$10-150

Note: All Julie Resistors are non-inductively wound, and meet or exceed military environmental requirements. The low limit of resistors for standard accuracy is 100 ohms.
** Price ranges are based on variables of value, temperature coefficient, etc. for quantities of one . . . quantity discounts are available on request.

KELVIN

Precision Wire-wound Resistors Power Resistors & Resistor Networks

Kelvin is a pioneer in the field of very high stability, close tolerance, precision wire-wound resistors. Resistors shown represent only part of the broad Kelvin line. Complete catalog data is available on request.

Typical "HRL" Resistor Test Results

TEST	MIL-R-39005 MAXIMUM	"HRL" SERIES AVERAGE	"HRL" SERIES MAXIMUM
Short Time Overload	±.01%	.0012%	.0080%
Temperature Cycling	±.05	.0014	.0100
Moisture Resistance	±.1	.0072	.0192
Dielectric Strength	±.01	.0010	.0013
Terminal Strength	±.05	.0001	.0004
Shock	±.01	.0008	.0010
Vibration	±.01	.0007	.0020

HIGH RELIABILITY "HRL" SERIES

Kelvin's "HRL" Series Resistors were designed to achieve a failure rate of .003%/1000 hours at a 90% confidence level. All data is based on life tests conducted at full rated power at 125°C for a minimum of 1500 hours. No "acceleration factors" are used. Present failure rates are .003%/1000 hours at a 60% confidence level.

FOR FAST RISE TIME APPLICATIONS

AXIAL LEAD

"RT" style resistors provide exceptionally high frequency performance, in addition to the other recognized advantages of wire-wound resistors. □ "RT" resistors can be supplied with rise times as low as 25 nanoseconds (from 10% to 90% of peak pulse amplitude with a 100 KC pulse input), depending on resistance values and physical configurations.

RESISTOR NETWORKS

Kelvin develops and produces, to customer requirements, packaged resistor networks for use as voltage dividers, analog to digital converters, summing and integrator networks, binary resistive networks and special configurations.

Electrical Characteristics Available:

- Nominal resistance tolerances to ±.002% (DC)
- Resistance ratio tolerances as close as .0005% (DC)
- Long term resistance stability of ±.001% per year.
- Low reactances to provide rise times as low as 25 nanoseconds.
- Temperature coefficients of resistors track as close as 0.5 ppm/°C. from —55° to +125°C.

Standard resistor networks in two series (R-2R and BCD) are available from catalog specifications. The potting, encapsulation and physical size flexibility of Kelvin resistors and case production techniques makes it possible to offer custom built units to exact customer requirements at reasonable prices. Our engineering department will review your requirements and submit price quotation and technical notes. 12-page Bulletin LN-37 available on request.

POWER RESISTORS

Series KS or KM — Silicone coated or molded power resistors from .4W to 13W. Sizes from .078"x.250". Tolerances to .025%. TCs to 5 PPM. Temperature to 350°C.

Series KC — Chassis mounted power resistors from 7W to 50W. Sizes from .334"x.600". Tolerances to .025%. TCs to 5 PPM. Temperature to 275°C.

Series KSB — Beryllium oxide power resistors from 1W to 18W. Smallest available precision power resistor for rated wattage. Sizes from .078"x.250". Tolerances to .025%. TCs to 5 PPM. Temperature to 350°C.

"RIB-ON-EDGE" RESISTORS

Rib-on-edge resistors are made to order for high wattage service where low resistances are required. They are also used for intermittent duty where relatively small size resistors must dissipate high wattages.

Rib-on-edge resistors are constructed of special alloy ribbon resistance wire crinkled and wound on edge around a tubular ceramic core. The resistance element is welded to a heavy terminal. The entire assembly is then secured to the ceramic tube by a special high temperature vitreous enamel. This type of resistor is classed as a "bare" resistor by NEMA and Underwriters' Standards and has a 375°C maximum operating temperature. The higher temperature rise permits the higher rating.

Rib-on-edge resistors can be made in fixed, adjustable, or tapped styles.

* Maximum resistances can be increased 25% with Lectrohm's unique full-crinkle winding.

Order by series number and resistance required.
(ROE followed by watts and ohms.)
OTHER SIZES CAN BE MADE TO FIT YOUR REQUIREMENTS.

LECTROHM OVALS

Flat- or oval-core type units have an oval cross section and are mounted by flat brackets of "stud type" for stacking, or "step brackets" for normal mounting. The mounting bracket is constructed of aluminum which acts as a heat sink and makes the higher wattage rating for the size core. They are available with ceramic silicone coating.

Miniature Oval Free Air Watts	Resistance Min.	Resistance Max.	XOVMS Series L	A	B (Core Size 3/8 x 1/8)
10	1	15K	3/4"	1"	7/16"
15	1	25K	1"	1 1/4"	7/16"
20	1	40K	1 1/2"	1 3/4"	7/16"
25	1	50K	2"	2 5/16"	7/16"

Step bracket (push-on) is not applicable.

Lectrohm RESISTORS

TYPE FP RESISTORS

Lectrohm type FP power resistor is one of the lowest cost power resistors available for printed circuit board applications.

The resistance element is tightly wound with premium quality resistance wire on fiberglas cores. Tinned steel terminals are clinched to the resistance element by automatic machines.

Terminals are designed to be inserted in 0.050″ or 0.070″ diameter holes. Center-to-center distance of prongs on terminals are variable from 0.5″ to 2.5″. Power rating is 4 watts per inch and resistance range is from 0.2 ohms per inch to 1,000 ohms per inch.

Lectrohm's SAC Series contains the patented fiberglas element from the FLU Series inclosed in a ceramic tube. The tube is then filled with quartz and the ends are sealed with humidity resistant silicone. SAC's are also available with "fuse weld" construction upon request.

SAC SERIES

Series	Dim.	Watts	Max. Res.
SAC5	5/16 x 1	5	2,000 ohms
SAC7	5/16 x 1½	7	3,000 ohms
SAC10	5/16 x 1¾	10	4,000 ohms

UC15	UE15	UP15	UM15	2″	15	7,500 ohms
UC20	UE20	UP20	UM20	2½″	20	10,000 ohms
UC25	UE25	UP25	UM25	3″	25	12,500 ohms
UC30	UE30	UP30	UM30	3½″	30	15,000 ohms

Order by series number and resistance required.

LECTROHM FLEXIBLES

LECTROHM STANDARD FLEXIBLES (FLU Series) are fixed wirewound resistors that can be used in small, confined spaces, and, being flexible, can be bent to conform to the available space. The are wound on a specially treated flat fiberglas core and insulated by a fiberglas sleeve. Free air rating is 2 watts per inch with the surface temperature at the hottest spot not exceeding 340°F. The terminals are hot tinned brass clamped to the resistance element so securely that they will stand a 10 pound pull applied axially. Lead wires are hot tinned 18, 20 and 22 gauge, 1⅜ inches. long.

The sleeved or insulated type is the FLU Series. It is also available without sleeving (bare element) in our ELE Series.

Maximum resistance is 2000 ohms per inch of winding and minimum resistance is 0.2 ohms per inch. Fuse-weld construction is limited to 750 ohms per inch.

MEPCO PRODUCT CHECK LIST

MEPCO

FH HERMETIC SEAL METAL FILM RESISTORS

• MAN RATED-SPACE PROVEN DESIGN • TRUE HERMETIC SEAL • ULTIMATE MOISTURE PROTECTION • EXCEEDS ALL MIL-R-55182 ENVIRONMENTAL REQUIREMENTS • BETTER THAN "S" FAILURE RATE • EXCELLENT STABILITY • ESTABLISHED RELIABILITY

FE SERIES - MOLDED METAL FILM RESISTORS

• ESTABLISHED RELIABILITY — PER MIL-R-55182 • MEETS OTHER STANDARD MIL REQUIREMENTS • PRECISION NETWORKS AND MATCHED SETS • ABSOLUTE TOLERANCE AS LOW AS .1% • RATIO TOLERANCE AS LOW AS .05% • TC's TO 15PPM • AVAILABLE FROM FACTORY STOCK FOR IMMEDIATE DELIVERY

MR SERIES - METAL FILM RESISTORS

• HI REL DEVICES AT LOW REL PRICES • 100% SCREENING • IMMEDIATE DELIVERY FROM FACTORY INVENTORY

MR 25 and 30 - COMMERCIAL LEVEL • CONFORMAL COATED • COLOR CODING • MEETS ENVIRONMENTAL REQUIREMENTS OF MIL-R-22684 and 10509* • TC ±100PPM • TOLERANCES TO 1%

MR 24 and 34 - MILITARY INDUSTRIAL LEVEL • CONFORMAL COATED • MIL-R-10509 CHARACTERISTIC D • TC's ±100PPM • TOLERANCES TO 1%

MR 31 and 39 - MILITARY RELIABILITY LEVEL • MOLDED ENCLOSURE • MIL-R-10509 CHARACTERISTIC C • TX RELIABILITY LEVEL • ±50PPM • TOLERANCE TO 1%

*EXCEPT POLARIZED MOISTURE TEST

HERMETICALLY SEALED CARBON FILM RESISTORS

• TRUE HERMETIC SEAL — PROVIDES ABSOLUTE ENVIRONMENTAL PROTECTION • PERFORMANCE PROVEN RELIABILITY • TOLERANCES AS LOW AS ±1% • TC's ±200 TO–500PPM • MIL-R-10509 — CHARACTERISTIC G • RESISTANCE RANGES 50Ω THRU 20 MEG

GE SERIES - THICK FILM DISCRETE RESISTORS

• RESISTANCE RANGE TO 50 MEG OHMS • MIL CONFIGURATIONS 1/20W. TO 1/4W • TC's ±150PPM • TOLERANCE TO 1% • MOLDED ENCLOSURE

"TINYCHIP" THICK FILM RESISTOR CHIPS

• MINIATURE SIZE — .050" x .050" TYPICAL • TOLERANCES TO 1% AVAILABLE • CUSTOM DESIGN AVAILABLE • SUPERIOR STABILITY • BONDABLE TERMINATIONS

PRECISION WIREWOUND RESISTORS

• TOLERANCES AS LOW AS .005% • TEMPERATURE COEFFICIENTS TO ±3PPM • HIGH STABILITY • CHOICE OF CONFIGURATIONS (AXIAL LEAD, RADIAL LEAD, PC, CERAMIC, BOBBIN)

WIREWOUND POWER RESISTORS

• HIGH POWER HANDLING CAPABILITIES IN SMALL SIZE • EXCELLENT PROTECTION AGAINST MOISTURE AND ENVIRONMENTAL HAZARDS • TOLERANCES TO ±.05%, TC's AS LOW AS 5PPM • BROAD RANGE OF STYLES • LOW THERMAL EMF

MINIATURE CERAMIC CAPACITORS

• THIN PLATE DESIGN (SMALLER THAN DISC CAPACITORS) • PRICED LOWER THAN OTHER THIN PLATE OR MONOLITHIC CAPACITORS • NON-MIGRATORY ELECTRODE SYSTEM FOR HIGH RELIABILITY • MEETS OR EXCEEDS MIL-C-11015 (CK 41, 42 and 43) • 100% FINAL TEST • HIGH TEMPERATURE SOLDER — ELIMINATES REFLOW PROBLEMS • FAST DELIVERY—LARGE INVENTORY MAINTAINED • HIGH VOLUME PRODUCTION CAPABILITY

HYBRID MICROCIRCUITS

• THICK FILM SUBSTRATES — PASSIVE AND ACTIVE CIRCUITS • HIGH STABILITY • LOW TC • PRECISION CIRCUIT CALIBRATION • CHIP AND WIRE ATTACHMENT OF ACTIVE DEVICES • LOWEST COST PROVEN TECHNOLOGY • DIGITAL AND LINEAR DEVICES • CUSTOM AND STANDARD CIRCUITS — 6 STANDARD DEVICES AVAILABLE FOR "OFF THE SHELF" DELIVERY — DESIGN, PROTOTYPING AND PRODUCTION OF CUSTOM CIRCUITS TO MEET INDIVIDUAL CUSTOMER REQUIREMENTS • EXPERIENCED, FLEXIBLE, COMPETITIVE — OVER 6 YEARS OF CONTINUOUS MANUFACTURING OF BOTH MILITARY (PER MIL-STD 883) AND INDUSTRIAL AND COMMERCIAL PRODUCTS

PRINTED CIRCUIT EDGE CONNECTORS

• EDGE CONNECTORS, INTERCONNECTORS, HIGH DENSITY CONNECTORS • COMBINATION CONNECTORS • COMPETITIVE PRICING • STATE OF THE ART TECHNOLOGY — HIGH DENSITY — BIFURCATED SPRINGS — STANDARD CONTACT SPACINGS — 4 TERMINATION STYLES • CUSTOM CAPABILITIES — COMPLETE DESIGN AND PRODUCTION CAPABILITIES TO PRODUCE CONFIGURATIONS TO MEET CUSTOMER REQUIREMENTS • ON TIME DELIVERY — FROM FACTORY STOCK • INTERCHANGEABLE WITH COMPETITIVE CONNECTORS

VAL RESISTORS

OVAL RESISTORS are for use where space saving is desired and where the use of the 'Heat Sink' function of the metal chassis, rack or panel may be employed. Resistance tolerance of ±5% is standard except on low resistance and multi-tapped units. COATINGS of vitreous enamel or silicone base are offered.

OVALS are available in regular or miniature sizes an original development of MILWAUKEE Resistor.

Additional miniature oval core sizes are available increasing the possibility of taps and isolated sections. Other intermediate sizes are also available. Only regular ovals are available as adjustable. For temperature coefficient below 20 ppm/°C consult the factory.

MINIATURE OVALS

REGULAR OVALS

Watts*	Ohms	Dimensions A	Dimensions L	Dimensions S
10	.1 to 5K	1"	3/4"	7/16"
15	.15 to 25K	1 1/4"	1"	7/16"
20	.2 to 50K	2 5/16"	2"	7/16"

* Rating based on mounting on steel panel 10"x10"x.040".

Oval Resistors are stackable. When stacking, the resistors should be derated to avoid excessively high temperatures. The table below shows approximate rating percentages.

Number of Resistors Stacked	Percent of Single Unit Rating: Vertical Stacking	Percent of Single Unit Rating: Horizontal Stacking
2	80	75
3	70	60
4	65	50

Watts*	Ohms	Dimensions A	Dimensions L
30	.10 to 10K	2"	1 1/4"
40	.13 to 25K	2 3/4"	2"
55	.18 to 30K	4 1/4"	3 1/2"
70	.22 to 55K	5 1/2"	4 3/4"
95	.25 to 75K	6 3/4"	6"

*Rating is based on mounting on steel pad 10"x10"x.040".

AXIAL RESISTORS

Available in a variety of sizes from 1 watt through 11 watts on request.

APPLICATIONS

- Electronic Circuitry
- Printed Circuits
- Radio, Television and Sound Reproduction
- Miniature Controls

FEATURES

- Rugged yet small.
- Highly stable.
- Matched expansion in core caps and coating for temperature stability.
- Standard 5% tolerance over 1 ohm, available in closer tolerances on request.
- Wattage ratings based on 300°C rise at 40°C ambient.
- Standard Stock — 3, 6.5 and 11 watt sizes.
- Leads Hot Tin Dipped.

CONSTRUCTION

- Wire Wound on Ceramic Core
- All Welded
- Vitreous or Silicone Base Coating

Number	Watts	Size	Ohms
2-7-ΩL	3	9/64 Dia x 9/16	1 to 10,000
4-14-ΩL	6.5	13/32 x 1	1 to 20,000
5-28-ΩL	11	13/32 Dia x 1 7/8	1 to 50,000

Ohmic values below 1 ohm or higher than shown, available on request.
When ordering use number, dash, resistance value; i.e. 3 watt, 500 ohm, 2-7-500L.

MILWAUKEE RESISTOR CORPORATION

700 WEST VIRGINIA STREET, MILWAUKEE, WISCONSIN 53204 • PHONE (414) 271-9900

FIXED AND ADJUSTABLE VITREOUS ENAMELED POWER RESISTORS

Also available with silicone or sand and cement coating

WATT RATING

Free air rating of 8 through 225 watt resistors meet NEMA 300°C rise in 40°C ambient.

TERMINALS

All 8, 12 and 20 watt fixed resistors are standard with 1½" tinned leads. They are available with conventional lug terminals.

12 watt adjustable and the 25 through 225 watt fixed and adjustable resistors have lug type terminals.

Available are single and double quick connect and many other special terminals to suit your requirements.

TOLERANCE

Standard resistance tolerance is ±5%. Other tolerances are available.

MOUNTING

Spring clips, vertical thru bolts and horizontal L brackets are available on all 8 through 225 watts. For ferrule mountings, special spring clips, mica washers, terminal hardware and other accessories, consult the factory.

ADDITIONAL RESISTORS

36 additional wattage ratings are available with different core diameters and lengths. Non-inductive, tapped, live bracket, porcelain bushings, printed circuit board, strip and fuse resistors are manufactured to your specifications.

MILWAUKEE will satisfy your resistor requirements with custom values, tolerances, T.C., shapes, sizes and coatings with its engineering leadership.

RIBWOUND RESISTORS

APPLICATIONS

Particularly useful where high energy is to be dissipated in the lower ohmic ranges. Due to its ability to operate at higher temperatures and dissipate greater heat, the ribwound resistor is almost one-half the physical size of the equivalently rated round-wire style resistor. Ribwound wattage ratings are based on a temperature rise of 375°C. They may be mounted with spring clips (thru 1 ⅛" dia.); thrubolt mounting hardware, individual or multiple-stacked bracket assemblies or live bracket mountings.

CONSTRUCTION

Crimped ribbon resistance wire is edge-wound and then locked to the ceramic core with vitreous enamel. Resistance wire is spot-welded to the terminal connectors. Ribwound resistors can be furnished in fixed, adjustable, or tapped styles. Cement coating can be furnished. Several 300 watt units are stocked in both fixed and adjustable styles. Listed are the more popular 300 watt ohmic values. All other wattage ratings and styles are made to order.

BATHTUB RESISTORS

"MILWAUKEE" Bathtub Resistors are wound on a high quality fiber-glass cord. Terminals with axial leads are securely clamped to the windings and encapsulated in a square ceramic case with a high temperature, inorganic, humidity proof, silicone compound. The rectangular shape of the ceramic case lends itself to compactness for easy installation and rapid heat dissipation. Good dielectric qualities with voltage breakdowns up to 1500 volts are achieved through encapsulation. Standard tolerance is ±10%. Closer tolerances are available.

SPECIAL LOW OHMIC VALUES for auto radio 5 watt size are in stock.

M.R.C. Part No.	Watts	Dim. "L" ±1/32	Dim. "W"	Dim. "H"	Max. Ohms	Min. Ohms

FEATURES

- Built-in standoff keeps board cool.
- Mounting feet prevent rocking.
- Power ratings 3 to 20 watts.
- Complete OHM range.
- One-piece, welded terminals
- Rectangular leads .020 x .040 in.
- Silicon base coating. Vitreous enamel coating available.
- Standard tolerance ±5%.
- 20 PPM upon request.
- Patent 3,462,651.

STRIP AND FUSE RESISTORS

STRIP resistors are designed for special applications and provide excellent performance characteristics at very economical prices.

Sturdy asbestos cores support the high quality resistance wire which terminates with 1½" tinned copper leads. Completely protected with high temperature cement and sand.

The wattage ratings listed are our standard units. Special wattages, length, width, or thickness are custom engineered for your specific requirement.

The core width and length are in 1/16th inch increments. The core thickness for the listed units is 1/8th inch. Other thicknesses are available, as are tapped units. Standard tolerance is 10% and other tolerances are available.

FUSE resistors are available in the same rating as any strip resistor. Dimensions are the same. Pin receptacles can be added to the leads for mounting. Fuse specifications of trip current and trip time should be specified.

GRID RESISTORS

"Milwaukee Grid" Resistors (patented) are the most versatile developed. They are competitively priced and incorporate more life and greater dependability features than ever before provided by conventional grid resistors.

Vibration-proof, unbreakable, all-mica insulation allows for extended operation at higher temperatures and higher voltages. The all-welded construction eliminates hot spots and resistance fluctuations.

Power-per-pound is far greater than on conventional grids. Any of these grid units can be used with natural ventilation or with booster fans without changing the design.

Modular construction facilitates connection in series or parallel for extended ratings. Any number of taps can be employed in the design.

Nytronics Resistors

PRECISION WIRE WOUND RESISTORS offer design engineers high stability, reliability, and tolerances to .001% in axial lead and printed circuit configurations. These products are subject to temperaturing cycling and aging stages in manufacturing to insure high stability.

RESISTOR NETWORKS The superior versatility of the wire wound resistor to other types of resistors makes possible an extremely high degree of accuracy.

Typically, the resistors are manufactured to compensate for the characteristics of the capacitor or inductor to nullify the C or L variation with environment.

These resistors are especially useful for binary ladder networks, phase shift and timing, binary summing, and voltage divider networks.

THIN FILM RESISTORS are designed for use at Frequencies from DC to 10,000 MC. They are produced with resistance elements ranging in thickness from 50 to 5,000 angstroms. Units have minimal "skin effect" and drop-off of resistance at these frequencies.

The thin film resistors are furnished in metal and carbon film and offer optimum performance in high frequency and high temperature applications. The carbon units are manufactured with pyrolytically deposited film on ceramic substrate, while the metal film is vacuum deposited and protected with an inorganic coating.

NYTRIM a 28-turn adjustable low value resistor, providing infinite resolution. This unit has particular application in accurate trimming of stable low value fixed resistors used in bridge and similar types of precision measuring equipment. The NYTRIM is used to equalize resistance in numerous circuits requiring fine adjustments — laboratory type transformers, filters, and transmission circuits.

VARIABLE RF ATTENUATORS are accurate variable step attenuators designed to operate from DC to 500MHz. They are rotary adjustable types, supplied as individual unmounted units or in combinations on rack mounted panels.

Each resistor used in the attenuator networks is mounted in a cavity which eliminates reactive components over the useful frequency range of the units. The resistors are of highly stabilized variety, pre-cured to minimize long term drift, and installed in a manner which prevents element value shift due to the heat of soldering.

Nine basic types are available: 5 types at 75 ohms impedance and 4 types at 50 ohms impedance. Combinations of these up to four can be supplied on standard 3½" x 19" rack mounted panels.

SERIES 99 MOLDED AXIAL LEAD VITREOUS ENAMELED RESISTORS

- FIRST MOLDED, WIREWOUND, VITREOUS ENAMEL RESISTOR
- INSULATED! Meets 1000 VAC Test
- WITHSTANDS 1500°F Temperature without Distortion
- RESISTS Chipping, Breaking
- VITRIFIED MARKINGS, Resist Abrasion and Active Solvents
- UNIFORM SIZE Permits Clip-Mounting with Significant Heat Sink Benefits
- HIGH OVERLOAD CAPABILITY

An exclusive technique (U.S. Patent No. 3,229,237) permits application of the vitreous enamel coating by **molding** instead of the conventional "dip" process. The dimensionally consistent and thicker coating that results, guarantees a 1000 VAC insulation rating plus unparalleled capability for withstanding very high temperatures, high humidity and immersion in salt solution.

These resistors are normally mounted by their axial leads. However, their consistent form also permits mounting in clips with heat sink benefits up to 100%. Resistor markings are also vitreous and will not burn off even under extreme overloads. Resistance tolerance is ±5%. Series 99 resistors meet the requirements of MIL-R-26 for "insulated" resistors. See Bulletin 103 or Catalog 50 for specific MIL types.

TYPE 994, COMMERCIAL, HIGH STABILITY

Standard Tolerance 3% • Tolerances to 0.25% Available

Type 994 units feature long term stability and the Series 99 low temperature coefficient of resistance (T.C.).

Stability: Type 994 resistors, on a 2000 hour, cyclic, load-life test (1½ hour on, ½ hour off) have less than ±2% ΔR.

Standard Tolerance for Type 994 resistors is ±3%. Tolerances to ±0.25% are available.

TYPE 991 FOR MILITARY APPLICATIONS

Meets the requirements of MIL-R-26E, Styles RW67V, RW68V and RW69V (350°C max. hot spot). Surpass the stability requirements of ±3% ΔR on the 2000 hour cyclic load-life test. The low TC of Series 99 units far surpasses the requirements of MIL-R-26E. Standard resistance tolerance is ±5% for values 1 ohm and above; below 1 ohm, ±10%; other tolerances can be supplied.

* Ohmite's standard power tolerance is 3% supplied at no extra charge over 5% for values 1 ohm and higher; 10% for values below 1 ohm. Closer tolerances are available.

TYPE 884 HIGH STABILITY, PRECISION-POWER TYPE

Type 884 resistors (Riteohm 88) are classified as high stability, precision-power types. They are aged and conservatively rated for maximum long term stability and exhibit superior characteristics despite relatively high operating temperature at rated wattage.

Type 884 units are available in tolerances of 0.05% and derate † to zero watts at 275°C ambient; T.C. = 0 ±ppm/°C; insulation tested at 1000 VAC except 500 volts for 1 watt size.
† For applications where maximum stability is of primary importance as may be the case with close tolerance resistors, a derating of 50% is recommended.

STANDARD TOLERANCES TO .05% AVAILABLE FOR VALUES 1 OHM AND ABOVE

TUBULAR VITREOUS ENAMELED RESISTORS

TYPE 200, BROWN DEVIL®

"BROWN DEVIL" (Type 200) vitreous enameled, wirewound resistors, have been an industry byword for small rugged power resistors. Compact, with surprising overload capability. Five sizes are stocked in a broad selection of values.

Ohmite Style	Rated Watts	Dimensions Lgth.	Dia.	Leads 1½" AWG	Resistance Range (Ohms)
200-3AA-48	3	7/16	.200	20	0.11 -10K

200-12D-48	12	1¾	5/16	18	0.083-57.1K
200-20H-48	20	2	7/16	18	0.14 -113K

TYPE 270, FIXED, RADIAL LUG

Lug type resistors are wire-wound on high quality ceramic cores, protected and insulated by Ohmite vitreous enamel.

Wire of finest alloy and largest possible size is used for each resistance. Original uniform close spacing of the turns maintained by anchoring effect of the vitreous enamel. Wire securely welded to the terminal lugs. Resistance tolerance: ±5% for values 1 ohm or higher; ±10% below 1 ohm.

Wattage ratings are for use in free air. When mounted in closed spaces or where circulation of air is restricted, they should not be used at more than one-half rating.

Ohmite Style	Rated Watts	Core Dimensions Lgth.	Dia.	Resistance Range (Ohms)
270-12D-57	12	1¾	5/16	0.75-51.6K
270-25K-40	25	2	7/16	0.15-100K

270-175P-46	175	8½	1⅛	0.13-101K
270-225P-46	225	10½	1⅛	0.17-129K

TYPE 210, "DIVIDOHM®" ADJUSTABLE

"Dividohm" resistors make ideal voltage dividers. Tapped "bleeders" are made by using one or more adjustable lugs, as required. Also useful for obtaining odd resistance values.

"Dividohm" resistors are vitreous enameled resistors on which a narrow strip has been left uncovered to expose a portion of each turn. Contact is made by an embossed contact on the adjustable lug.

Ohmite Style	Rated Watts	Core Dimensions Lgth.	Dia.	Resistance Range (Ohms)
210-12D-57	12	1¾	5/16	0.95- 30K
210-25K-40	25	2	7/16	0.24- 67K

210-225P-46	225	10½	1⅛	0.86-128K

TYPE 250, "THIN" RESISTORS — FIXED

Ohmite Code	Rated Watts	Core Dimensions Lgth.	W.	Thk.	Resistance Range (Ohms)
250-10TA-51	10	¾	⅜	⅛	0.15 to 12.9K
250-15TA-51	15	1	⅜	⅛	0.25 to 21.6K
250-20TA-51	20	2	⅜	⅛	0.64 to 56.1K
250-25TD-51	25	1½	13/16	¼	0.14 to 16.0K
250-30TE-57	30	1¼	1	¼	0.093 to 10.8K
250-40TE-57	40	2	1	¼	0.22 to 25.0K
250-55TE-57	55	3½	1	¼	0.92 to 36.5K

Ohmite "Thin" Resistors are used where space is at a premium. Wirewound on flat, oval shaped ceramic cores. Coated with Ohmite's exclusive vitreous enamel.

Stack-mounted "Thin" resistors

Integral thru-core mounting brackets equalize heat distribution and conduct heat directly to metal mounting surface. Reduce wattage rating 15% if mounted on non-metallic surface.

Total height from bottom of bracket to top of resistor: 9/16" for 10 thru 20 watts; 11/32" for 25 thru 55 watt size.

TYPE 260, "THIN" DIVIDOHM® — ADJUSTABLE

Ohmite Code	Rated Watts	Core Dimensions Lgth.	Wdth.	Thk.	Resistance Range (Ohms)
260-15TA3-51	15	1	⅜	⅛	2.8 to 21.6K

PRECISION POWER RESISTORS, AXIAL LEADS

Highly reliable, silicone coated, precision resistors manufactured to meet MIL-R-26 specifications. There are 17 basic sizes with power ratings from ½ to 10 watts and resistance ranges from .05 ohms to 275K ohms. Resistance tolerances from .05% to 5% (1%, standard). Temperature coefficient of resistance 2PPM up (20PPM, standard).

OMI RESISTORS HT HF

OMTRONICS MANUFACTURING, INC. • 2406 LEAVENWORTH STREET, OMAHA, NEBRASKA 68105 • (402) 348-950

HT Models are anodized, aluminum-housed, precision wire-wound resistors, designed to chassis mount for maximum heat dissipation. They are manufactured to meet or exceed MIL-R-18546 specifications. Four sizes: 5 to 50 watts (mounted), resistance ranges from .1 ohm to 250K, depending on size. Tolerances —1% standard — .05% to 5% available. Temperature coefficient from 2PPM up. (20PPM, standard.)

HF Models are identical in dimensions, resistance ranges, tolerance and temperature coefficients with those of the HT Series, but offer a great increase in their power ratings as similar size through the use of beryllium oxide cores for increased heat dissipation. These are manufactured to exceed MIL-R-18546 power ratings.

STANDARD ELECTRICAL SPECIFICATIONS

OMI Type		MIL Type	Power Rating (Watts)*			Resistance Range		Max. Working Voltage		Max. Weight Grams
			HF (OMI)	HT	MIL	MIN.	MAX.	HF	HT	
HF-5	HT-5	RE-60	15	5	5	.1	22K	220	160	3
HF-10	HT-10	RE-65	20	10	10	.1	47K	340	265	7
HF-25	HT-25	RE-70	35	25	20	.1	90K	650	550	14
HF-50	HT-50	RE-75	50	50	30	.1	250K	1400	1250	29
	HT-75			75		.1	75K		1500	120

*Rating is based on chassis mounting area and stability.

Chassis Dimensions:

HT-5, HF-5, HT-10 and HF-10 — 6x4x2x .04", Aluminum Chassis.

HT-25, HF-25, HT-50 and HF-50 — 7x5x 2x.04". Aluminum Chassis.

HT-75 — 12"x12"x.062, Aluminum Panel.

DERATING

OMI, HT and HF resistors have an operating temperature range of —55°C to +275°C. Derating is required for reduced chassis mounting area and for high ambient temperatures. The graph curves shown apply to operation of unmounted resistors. Free air rating.

A = HT5, HT-10
B = HT-25
C = HT-50, all HF Series and HT-75

HN HFN ALUMINUM HOUSED, NON-INDUCTIVE

HN and HFN Models with equivalent electrical and physical specifications to the HT and HF Series are also available with non-inductive windings. To order HT, non-inductively wound, specify "HN". To order HF, non-inductively wound, specify "HFN" instead of the basic HT and HF models. **NOTE:** The following conditions apply to non-inductive types as compared to HT or HF:

1. Maximum resistance values must be divided by 2.
2. Maximum working voltage must be multiplied by .707.
3. Maximum weights may slightly exceed those shown above.

HEAT SINK CAPABILITIES

OMI's factory tooling and engineering experience put at your disposal facilities of design and production to manufacture heat sink resistors for your specific requirements.

Manufactured to your specific parameters, these resistors include the following outstanding characteristics: (A) High power capabilities, (B) 4-Wire low value resistors as well as the standard 2-wire units, (C) Combined characteristics such as .05 ohms ±5 PPM and 4-wire termination and (D) high temperature, high pressure integral molding into housing constructions.

This advanced state of the art allows us to confidently solicit your inquiries for special design modes.

OMI RESISTORS F SERIES

OMTRONICS MANUFACTURING, INC. • 2406 LEAVENWORTH STREET, OMAHA, NEBRASKA 68105 • (402) 348-950

SILICONE COATED RESISTORS, AXIAL LEADS BERYLLIUM OXIDE CORE

The OMI F Series resistors — at ratings from 1 to 15 watts—offer greatly increased power ratings over co ventional resistors of equivalent size. All resistors in the F Series are manufactured in accordance with MI Specs. and are available in ten basic physical sizes with resistance ranges from 0.1 ohm to 250K ohms. Resi ance tolerances from 0.05% to 5% (1%, standard) and temperature coefficient of resistance from 2PPM u (20PPM, standard).

* Maximum working voltage determined at .0008 dia. wire.

SPECIAL FEATURES All features of the conventional precision power resistors, plus the beryllium oxide core for optimum heat dissipation, allow reduction of physical size of resistor while maintaining equivalent power ratings of conventional types.

DERATING

Applicable to both F and T Series

Both OMI, T and F Series resistors have an operating temperature range of −55°C to 275°C (characteristic U) or to 350°C (characteristic V). Derating is required for high ambient temperatures in accordance with the curve shown at left.

N FN

NON-INDUCTIVE TYPES

Available with both Axial and Radial Leads

OMI Models of equivalent physical and electrical specifications are available with non-inductive windings. They are identified by the letter "N"; to order non-inductively wound T Series, specify "N"; to order non-inductively wound F Series, specify "FN".

NOTE: The following conditions apply to specifications applicable to the non-inductively wound types, as compared to the basic T or F types.

1. Maximum resistance must be diveded by 2.
2. Maximum working voltage must be multiplied by .707.
3. Maximum weights may slightly exceed those shown for the basic T or F types.

MINIATURE POWER RESISTORS

FR SERIES

Radial Leads

As in the OMI, TR Series, models of equivalent electrical, mechanical, power rating and derating specifications are available in FR3, FR5, FR5A, FR5C, FR6, FR10, FR12, and FR15 dimensions. These models are also available non-inductively wound and identified as the FNR Series.

TEMPERATURE COEFFICIENT

Although all OMI, T, F, HT and HF resistors are manufactured with a temperature coefficient of ±20PPM/°C over the full temperature range and resistance range as standard production, closer temperature coefficients are available.

Special Close T.C. Availability: All styles can be supplied with temperature coefficients of ±10PPM, ±5PPM, and ±2PPM. Non-inductively wound styles can be supplied with ±10PPM.

Temperature Range: −65°C to +275°C.

Tolerance Range: 0.05% to 5%.

Resistance Range: 0 to 2 watts, 25 ohms to maximum for each size.
Over 2 watts, 50 ohms to maximum for each size.

Code to Designate Special T.C: 10PPM C-10
5PPM C-5
2PPM C-2

To Order Resistors with Special T.C., Specify:
(example)

Resistor Type	Resistance Value	Tolerance	T.C. Code
T-5	4700 ohms	0.5%	C-5

RCL *subminiature axial lead resistors*

These extremely small, encapsulated resistors meet and exceed the specifications of MIL-R-93D. Special RCL techniques also allow the production of custom sizes at minimal cost to the customer.

Tolerances available: from ±1.0% to ±0.001%

Temperature coefficient: Standard is ±10 PPM/°C.
Temperature coefficients available as low as ±1 PPM/°C.

RCL Type	Dia. Inches (±1/64)	Length Inches (±1/32)	Max. Watts	Max. Volts	Max. Res. .001 Wire	Max. Res. .0005 Wire	Non-inductive	Lead Diam. (Length 2" ±1/8")

RCL SERIES T
silicone coated precision power wire-wound resistors

General Specifications Available:

- ☐ **Standard temperature coefficient:** ±10 PPM/°C. Additional TC's available from −50 PPM/°C to +6000 PPM/°C.
- ☐ **Tolerance:** ±1.0% is standard. Available to ±.01%.
- ☐ **Wattage Range:** ½ watts to 14 watts.
- ☐ **Resistance Values:** from .01 ohms to 275K. Higher values available.
- ☐ **Coating:** Silicone coating withstands moisture, salt, water immersion, and cleansing solutions.
- ☐ **Leads:** Tinned copperweld is standard. Leads are weldable and solderable.
- ☐ **Dielectric Strength:** 1000 VAC "V" block test.
- ☐ **Insulation Resistance:** 5000 Megohms minimum at 100 volts D.C.
- ☐ **Wide Temperature Range:** From −65°C to +275°C (Characteristic U) or +350° (Characteristic V).

Lead Length: 1¼" minimum. * Tolerance applies to all types unless otherwise indicated.

POWER RATINGS:
The RCL "T" Series has two power ratings, depending on operating temperature and stability requirements:
CHARACTERISTIC U: 275°C maximum hot-spot temperature.
CHARACTERISTIC V: 350°C maximum hot-spot temperature.

DERATING:
RCL Series "T" resistors have an operating temperature range of −65°C to +275°C (Characteristic U), or to +350°C (Characteristic V).

Ultra-fast delivery for prototpyes and initial production needs.

RCL ELECTRONICS, INC.

General Sales Office:
700 South 21st Street, Irvington, N. J. (Area Code 201) 374-3311 • TWX 710-999-5511

RCL *special temperature coefficient wire wound resistors*

- Applications include transistor circuits, zener diode temperature compensation, temperature measuring devices.
- Available in a range of temperature coefficients from −50 ppm/°C. to +6,000 ppm/°C.
- Values range from 10 ohms to 5 megohms.
- All available with axial or printed circuit leads.
- All meet applicable paragraphs of Mil-R-93D

These special T.C.'s are arrived at by the blending of special metals and alloys, and therefore the T.C. characteristics may vary over extremes of temperature. Each of these alloys has a special temperature characteristic. If your specific application necessitates coverage over a wide temperature range, please contact the factory for special details.

These T.C.s may be applied to almost all of the RCL precision and power resistors. Write for catalog for complete details.

Considerable attention should be paid to the column headed "R FACTOR". This factor should be applied to the "MAX RESISTANCE" values found for the style chosen in the normal catalog listing, and the resulting figure becomes the true maximum resistance for this high T.C. unit. This is caused by the varying resistivities of the metals used to obtain the listed T.C.'s.

Special Temperature Coefficients available (see table below)

COLD RANGE	HEAT RANGE	R FACTO
−55°C to +25°C	+25°C to +105°C	Multiply Max. R by

FEATURES

- Tolerance: Available from ±3% to ±.01%.
- Standard T.C.: ±10 PPM/°C. Lower T.C.'s are available.
- All popular types, 5 watts through 50 watts
- Molded and welded construction
- Screw mounts on chassis
- Exceptionally high stability at all conventional power ratings
- Utilizes heat-sink effect of chassis
- Clearly marked on top surface of housing for ease of identification after mounting
- Exceeds MIL-R-18546D
- Complete protection against environment

RCL TYPE	MIL-R-18546D TYPE	POWER RATING* (WATTS) RCL	POWER RATING* (WATTS) MIL	RESISTANCE RANGES (OHMS)	MAX. WORKING VOLTAGE	MAX. WT. GRAMS
AL-5	RE-60G	7.5	5	.05 to 24.5K	160	3
AL-10	RE-65G	12.5	10	.05 to 47.1K	265	6
AL-25	RE-70G	25	20	.05 to 95.2K	550	14
AL-50	RE-75G	50	30	.05 to 273K	1250	29

Rating based on chassis mounting.

NON INDUCTIVE STYLES:
The same physical and electrical specifications are available with non-inductive winding. They are identified by adding the letter N after the AL identification.

	EZZ-1	80	125 KV	700 K	1 G	19 11/16	2 5/16		1 3/64	

All dimensional tolerances ±1/64" or 1% whichever is greater.

* Unless otherwise specified all type B resistors are normally supplied sleeved with a .015 wall clear vinyl sleeving which increases the diameter shown by .03.

Order resistors without sleeving if units are to be operated near maximum limits, at elevated ambient, or in all coolant.

** Sleeving available on request. Increase dia. shown by .08.

Available with adjustable tap bands or with tapped windings.

NON-INDUCTIVE RESISTORS: for high frequency power circuits. Available in all fixed-lug types, 10 watts and larger. Standard tolerances: ±10%.

RESISTANCE TOLERANCES: Standard: ±5%, 1.0 ohm and over. Special: down to ±1%.

STACKPOLE

FIXED COMPOSITION RESISTORS

Stackpole Resistors offer superior performance in terms of load life, moisture resistance, shelf life, and other important characteristics. Available in ¼, ½, 1, and 2 watt insulated types in resistance values with 5%, 10% and 20% tolerances as shown below.

EASIEST SOLDERING

is asured thanks to an exclusive extra solder coating applied after the usual tin dipping. Leads of Stackpole Resistors solder readily by any method—dip or iron—stay tarnish free even after months in storage. And, their baked-on color codes resist solvent scrubbing operations . . . maintain uniform, attractive appearance.

SAGE ELECTRONICS CORPORATION

TYPE M

TYPE S

TYPE C

TYPE C CLIPPER METAL SHEATHED RESISTORS

Similar in all respects to Type S, fully insulated plus addition of metal sleeve for heat sink mounting in spring clip holders.

TYPE S, NS SILICONE COATED POWER RESISTORS

Meet or exceed MIL-R-26D requirements. N designates non-inductive.

STYLE	Rating Watts		STYLE	Rating Watts	Nominal Size Length	Nominal Size Dia.	Lead Dia.	Standard Range, Ω Regular Winding	Standard Range, Ω Non-Inductive*

SAGE SILICOHM® fixed wirewound units ar not ordinary power resistors. They provide re markable miniaturization vs required wattag performance. Sage has pioneered the area o power handling capacity combined with preci sion and stability features ordinarily associated with MIL-R-93 and like resistors.

TYPE SB & NSB HIGH WATTAGE COMMERCIAL BERYLLIA CORE RESISTORS

STANDARD SOLDERABLE LEADS	STANDARD WELDABLE LEADS	RATED WATTS G	RATED WATTS V	Approx. Grams WEIGHT

TYPE MB HIGH WATTAGE
BERYLLIUM OXIDE CORES

STYLE	RATED WATTS 25°C ambient chassis mounted	RATED WATTS 25°C ambient free air
3105 MB/NMB	15	6
3010 MB/NMB	20	8
3225 MB/NMB	35	14
3550 MB/NMB	50	20

MB suffix designates regular single layer wind, NMB non-inductive wind.

MIL-R-26D TYPE DESIGNATIONS

EXAMPLE: RW69 — Body Style; V — Characteristic, V only (350°C max.); 471 — Nominal resistance, Ω. Two significant digits plus third indicating number of zeros. Below 10ΩR = decimal and last digit is significant.

TOLERANCE: ±5% for values 1Ω and up; ±10% below 1Ω.
TC: ±260 ppm/°C 20Ω and up; 400 ppm/°C below 20Ω.

MIL STYLE	SAGE STYLE	MIL WATTS	DEFINED OHMIC RANGE (Single layer wound .00175 min. wire dia.)
RW55V	1900S	7	.1—5100
RW56V	1950S	14	.1—9100
RW67V	1550S	6.5	.1—3600
RW68V	1700S	11	.1—8200
RW69V	1200S	3	.1—910

EXAMPLE:
RW70 — Body Style; U — Characteristic, U only (275°C max.); 49R9 — Nominal resistance, Ω. Three significant digits plus fourth indicating number of zeros. Below 100ΩR = decimal and following digits are significant.; F — Tolerance ±% B = .1% D = .5% F = 1.0%

TC: ±30 ppm/°C 10Ω and above
±50 ppm/°C 1Ω to 10Ω
±90 ppm/°C below 1Ω

MIL STYLE	SAGE STYLE	MIL WATTS	VOLTAGE Max.	DEFINED OHMIC RANGE Min.	Max. for .001" wire (Navy)	Max. for .0008" wire (all other)
RW70U	1000S	1	——	.1	1210	3160
RW74U	1500S	5	300	.1	12100	38300
RW78U	1700S	10	720	.1	40200	90900
RW79U	1240S	3	135	.1	3570	10500
RW80U	1000SB	2	——	.1	1240	3160
RW81U	250SB	1	25	.1	649	——

MIL-R-18546D TYPE DESIGNATIONS

Example:
RE65 — Style; G — Characteristic, 275°C Max. G for regular inductive winding N for non-inductive winding; 1001 — Nominal resistance, Ω. ±1% only. Three significant digits plus fourth indicating number of zeros. Below 100Ω R = decimal and following digits are significant.

T.C. ±30 ppm/°C 2000Ω and above
±50 ppm/°C under 2000Ω

MIL STYLE	SAGE STYLE	MIL WATTS	DEFINED OHMIC RANGE Min.	Max. (.001 wire)
RE60G	3105M	5	.1	3320
RE60N	3105NM	5	1.0	1650
RE65G	3010M	10	.1	5620
RE65N	3010NM	10	1.0	2800
RE70G	3225M	20	.1	12100
RE70N	3225NM	20	1.0	6040
RE75G	3550M	30	.1	39200
RE75N	3550NM	30	1.0	19600

CONSIDER THESE DETAILS:

- Wattage Rating, ½ to 50 watts
- Tolerance and stability as close as .05%
- T.C. 20 ppm/°C or 10 ppm/°C
- 1000 volt rms body insulation
- Low values not available in other resistors (specials to .01Ω)
- Characteristic U or V wattage rating: to 275°C or 350°C
- Power load life stability <.5%/1000 hours
- Weldable leads when specified
- Non-inductive winding when specified

TEMPERATURE COEFFICIENTS

These high stability evaporated metal film resistors are available in nine temperature coefficient tolerances.

MIL-R-10509 Char.	Code	Temperature** Coefficient	Temperature Span
*D	T-0	0 ±100PPM/°C	−55°C to +165°C
*C	T-2	0 ±50PPM/°C	−55°C to +175°C
*E	T-9	0 ±25PPM/°C	−55°C to +175°C
	T-3	0 to +100PPM/°C	−55°C to +165°C
	T-4	0 to −100PPM/°C	−55°C to +165°C
	T-5	0 ±25PPM/°C	+25°C to +145°C
	T-6	0 to +50PPM/°C	−55°C to +165°C
	T-7	0 to −50PPM/°C	−55°C to +165°C
	T-8	0 ±25PPM/°C	+25°C to +165°C
		0 ±35PPM/°C	−55°C to +25°C

*Standard types. All others are special.
**Parts Per Million per degree centigrade (100PPM equals 0.01%).
T.C. code marking is combined with the code for the date of manufacture.

RESISTANCE RANGE

The maximum extended ranges shown above are also available with a TC of +100PPM/°C, −250PPM/°C—Code TR or +100PPM/°C, −500PPM/°C—Code TE ±1.0% tol. only.

TOLERANCES

Metal film resistors are supplied in standard tolerances of ±1.0%, ±0.5%, and ±0.25%. In addition, tolerances of ±0.1% and ±0.05% are available on special order.

VOLTAGE COEFFICIENT

Voltage coefficient when measured between 1/10 and full rated voltage is less than 5PPM/Volt, for all values. On low and medium value resistors, the voltage coefficient is essentially zero.

METAL FILM MATCHING

Metal Films can be matched to within the maximum deviations outlined

TYPE OF MATCH	MINIMUM TOLERANCE MATCH	MINIMUM TC MATCH	MAXIMUM DEVIATION BETWEEN ANY TWO UNITS IN SET	TEMPERATURE
Tolerance (All Units Same Value)	0.02%	NA	0.02%	25°C Only
Tolerance — Ratio	0.05%	NA	0.05%	25°C Only
TC Only (T5, T8 or T9)	NA	3 PPM/°C	initial tolerance +0.024%	25°C to 105°C
TC Only (T9 Only)*	NA	8 PPM/°C	initial tolerance +0.11%	−55°C to +165°C
TC and Tolerance All Units Same Value (T5, T8 or T9)	0.02%	3 PPM/°C	0.044%	25°C to 105°C
TC and Tolerance All Units Same Value (T9 Only)*	0.02%	8 PPM/°C	0.13%	−55°C to +165°C
TC and Tolerance Ratio (T5, T8 or T9)	0.05%	3 PPM/°C	0.074%	25°C to 105°C
TC and Tolerance Ratio (T9 Only)*	0.05%	8 PPM/°C	0.16%	−55°C to +165°C

Resistors may not be returned after 90 days. Resistors must be outside specification by more than 0.02% to be returnable for deviation.

* Units matched for an operating temperature span exceeding +25°C to +105°C (−55°C to +165°C maximum), all units in the set must be of same style. When units are ratio matched for this excessive operating temperature span all units must also fall within a single range of resistance values as indicated.

*These high resistance values, being above the highest MIL-R-10509 top values, have higher temperature coefficients, but otherwise are designed to meet the requirements of the specification (see Temperature Coefficient Curves). These high resistance values must be measured carefully under controlled conditions of humidity and temperature, to reduce possible variations due to test conditions and temperature coefficients. Due to higher temperature coefficient, value above approximately two times MIL maximum will be supplied with a standard tolerance of ±2.0%.

TOLERANCE. Standard tolerance is ±1%. ±0.5% tolerance is available at a slight additional cost.

VOLTAGE COEFFICIENT. This factor is negligible. Statistically, the voltage coefficient is less than 20 ppm/v.

SHELF LIFE. Shelf life tests show average resistance change of less than 0.25%.

1/8 AND 1/4 WATT MOLDED METAL GLAZE RESISTORS (TYPE RG)

TRW®
ELECTRONICS GROUP

1/8 WATT

RG⅛ SPECIFICATIONS

MIL-R-11 style equivalent RC05
Resistance Range ..... 10Ω through 100K
Resistance Tolerance ..... ±5%
Power Rating ..... ⅛ Watt at 70°C, derated to 0 at 150°C
Temperature Coefficient ..... Less than ±500 PPM/°C
Maximum Continuous Working Voltage 200V
Dielectric Withstanding Voltage ..... 300V at atmospheric pressure
Insulation Resistance ..... 1,000 Megohms, Dry

DERATING CURVE TEMPERATURE — POWER

1/4 WATT

RG¼ SPECIFICATIONS

MIL-R-11 style equivalent RC07
Resistance Range ..... 6.2Ω through 680K
Resistance Tolerance ..... ±5%
Power Rating ..... ¼ Watt @ 70°C, derated to 0 at 150°C
Commercial — ½ watt @ 70°C
¼ watt @ 125°C, derated to 0 at 150°C
Maximum Continuous Working Voltage 250V
Dielectric Withstanding Voltage ..... 500V RMS at atmospheric pressure
325V RMS at 3.4 inches of Mercury
Insulation Resistance ..... 1,000 Megohms, Dry
Temperature Rise at rated power ..... ¼ watt — 20°C, ½ watt — 40°C

RG07 SPECIFICATIONS

MIL-R-22684 style equivalent RL07
MIL-R-39017 style equivalent RLR07
Resistance Range ..... 10Ω through 150K
Resistance Tolerance ..... ±2% and ±5%
Power Rating ..... ¼ Watt at 70°C, derated to 0 at 150°C
Maximum Continuous Working Voltage 250V
Dielectric Withstanding Voltage ..... 500V RMS at atmospheric pressure
325V RMS at 3.4 inches of Mercury
Insulation Resistance ..... 1,000 Megohms, Dry
Temperature Rise at rated power ..... 20°C

DERATING CURVE TEMPERATURE — POWER FOR RG¼ & RG07

TRW

1/4 AND 1/2 WATT PRECISION MOLDED THICK FILM RESISTORS (TYPES T & TF)

ELECTRONICS GROUP

1/4 WATT

T-55 AND TO-55 SPECIFICATIONS

MIL-R-10509 style equivalent RN55
Resistance Range ..... T-55 — 10Ω through 301K
TO-55 — 10Ω through 499K
Resistance Tolerance ..... ±1%
Temperature Coefficient (PPM/°C) ..... T-55 — +200, −500
TO-55 — ±100
Power Rating ..... ¼ Watt at 70°C, derated to 0 at 160°C
⅛ Watt at 125°C, derated to 0 at 160°C
Maximum Continuous Working Voltage 250V
Dielectric Withstanding Voltage ..... 500V RMS at atmospheric pressure
325V RMS at 3.4 inches of Mercury
Insulation Resistance ..... 1,000 Megohms, Dry
Temperature Rise at rated power ..... 20°C

TF07 SPECIFICATIONS

MIL-R-22684 style equivalent RL07
Resistance Range ..... 1Ω through 10Ω
Resistance Tolerance ..... ±1%, ±2% and ±5%
Temperature Coefficient (PPM/°C) ..... ±100
Power Rating ..... ¼ Watt at 70°C, derated to 0 at 150°C
Dielectric Withstanding Voltage ..... 500V RMS at atmospheric pressure
325V RMS at 3.4 inches of Mercury
Insulation Resistance ..... 1,000 Megohms, Dry
Temperature Rise at rated power ..... 20°C

*On ±2 and ±5% units. Printed markings standard on ±1% units.

1/2 WATT

T-60 AND TO-60 SPECIFICATIONS

MIL-R-10509 style equivalent RN60
Resistance Range ..... T-60 — 24.9Ω through 499K
TO-60 — 10Ω through 1 Meg.
Resistance Tolerance ..... ±1%
Temperature Coefficient (PPM/°C) ..... T-60 — +200, −500
TO-60 — ±100
Power Rating ..... ½ Watt at 70°C, derated to 0 at 160°C
¼ Watt at 125°C, derated to 0 at 160°C
Maximum Continuous Working Voltage 350V
Dielectric Withstanding Voltage ..... 700V RMS at atmospheric pressure
400V RMS at 3.4 inches of Mercury
Insulation Resistance ..... 1,000 Megohms, Dry
Temperature Rise at rated power ..... 40°C

DERATING CURVE TEMPERATURE — POWER FOR T-55, TO TO-55, T-60 & TO-60

TF20 SPECIFICATIONS

MIL-R-22684 style equivalent RL20
Resistance Range ..... 1Ω through 10Ω
Resistance Tolerance ..... ±1%, ±2% and ±5%
Temperature Coefficient (PPM/°C) ..... ±100
Power Rating ..... ½ Watt at 70°C, derated to 0 at 150°C
Dielectric Withstanding Voltage ..... 700V RMS at atmospheric pressure
400V RMS at 3.4 inches of Mercury
Insulation Resistance ..... 1,000 Megohms, Dry
Temperature Rise at rated power ..... 40°C

*On ±2 and ±5% units. Printed markings standard on ±1% units.

Current Noise	Negligible
Marking	Standard EIA/MIL Color Code (double width first band)

PACKAGING AND CUT & FORMED LEADS

IRC general purpose resistors are packaged in a variety of styles. Cut and formed leads are also available. Consult TRW with your specific requirements.

TRW HIGH TEMPERATURE POWER RESISTORS

ELECTRONICS GROUP

FEATURING FIREPROOF INORGANIC CONSTRUCTION

for temperature compensation • circuit protection

IRC Type PW Wirewound Resistors are available in nine ratings: 2, 3, 5, 7, 10, 15, 20, 22 and 50 watts.

DESIGN AND CONSTRUCTION: The resistance elements of PW resistors are rigorously quality controlled for resistance, temperature coefficient, diameter and elongation. The wire is wound on a fiberglass core, which forms a smooth, uniform surface. The fill is the same inorganic fireproof material used in premium IRC resistors. The husky, oxygen-free copper lead wires are held by ¼ hard brass terminals. The whole assembly is then sealed in a crackfree steatite ceramic case. Special PW resistors are also available for circuit protection and temperature compensation. Optional construction is available for printed circuit board applications.

TOLERANCE: ±10% is the standard tolerance on Standard Temperature Coefficient Resistors.

IRC TYPE FRW

TOLERANCES

Standard tolerance for single section, flat power wirewound resistors is ±5% above 1 ohm, and ±10% below 1 ohm.

Standard tolerance on tapped and adjustable FRW resistors is ±10%.

Wattage rating based on 350°C hot spot at 40°C ambient with resistor mounted horizontally on a 10" x 10" x .040" steel plate in free air using standard mounting brackets.

IRC Wattage	IRC Type	MIL Type and Rating	V Watts	DIMENSIONS Mounting Centers	Core Length	Minimum Ohms	Max. Ohms .0025 Wire	Max. Ohms .00175 Wire	Max. Ohms .0014 Wire

ADJUSTABLE FLAT TYPE FRWA

The adjustable feature of Tubular Type Resistors is also available on Flat Type FRWA Resistors. Adjustable FRWA's come in four sizes.

The general characteristics of Tubular Type Resistors also pertain to FRWA units. However, the compact design of these resistors provides a much higher power-space ratio than that of standard tubular resistors. Non-magnetic mounting brackets extend into the resistor. These aid in heat distribution along the entire length of the unit and serve as conductors to transfer internal heat to the chassis. Mounting bracket design prevents the resistor from rotating and loosening.

IRC Wattage	IRC Type	DIMENSIONS A Mounting Centers	B Core Length	Minimum Ohms	Max. Ohms .0025 Wire	Max. Ohms .00175 Wire	Max. Ohms .0014 Wire

HIGH FREQUENCY, HIGH VOLTAGE RESISTORS

TRW®

ELECTRONICS GROUP

TYPE MP

IRC type MP resistors have a specially designed resistance film which provides optimum performance in all characteristics while operating at high frequencies. The cross-sectional area of this exclusive film is held to less than 0.001″ thickness to assure low inherent capacity and freedom from skin-effect.

Terminal bands of colloidal silver are applied to each end of the resistor to form a permanent low resistance contact to the resistance film. Lug, axial lead or ferrule terminals, when required, are secured to the silver end-bands. A protective coating is baked on the entire resistor film.

Type MP Resistors are used extensively for applications such as broad band RF amplifiers, RF probes, rhombic antenna terminating resistors, dummy loads for transmitters and dielectric heating equipment, television side-band filters, surge generator and other circuits involving high frequency measuring circuits and radar pulse equipment.

TYPE MV

For high voltage requirements where high resistance and power are needed, IRC Type MV Resistors offer exceptional stability. IRC's exclusive composition film type resistance coating is applied in helical form on a ceramic tube to provide a conducting path of long, effective length. The mechanical spacing of the helical turns gives a uniform pitch, and allows uniform voltage gradient throughout the length of the resistor.

MV Resistors are particularly suited for voltmeter multipliers, high resistance standards, bleeders, grid leaks, voltage dividers, TV high voltage circuits, cathode ray tube circuits. Also, protective equipment for high voltage circuits, photoelectric cell applications, high range bridge circuits, ionization chambers and similar electronic applications.

HIGH OHMIC—TYPE MVX

Type MVX meets the requirements for a small, high-range resistor with axial leads. It can be mounted through a hole in a panel or terminal board of insulating material without terminal interference. Construction corresponds to that of other MV types except for the terminal and method of terminal attachment.

TERMINALS. MVX Resistors can be furnished with or without end caps and axial leads. When furnished without leads, contact must be made to .25-inch silvered ends by pressure clips, since they cannot be soldered.

TOLERANCE. Standard tolerance for MVX Resistors is ±20%. ±5% and ±10% are available as shown in the table at right, at extra cost.

CONCENTRIC DISC RESISTORS

RESISTANCE ELEMENTS

Concentric Disc Resistors are die stamped from resistance strip. Inner and outer rings of colloidal silver are applied to provide contact with coaxial line fixtures. *Mechanical pressure type contacts must be used rather than soldered connections.*

RESISTANCE VALUES AND TOLERANCES

Standard resistance values available are 5 ohms to 100,000 ohms. Standard tolerance is ±20% with ±10% available on special order. For other resistance values or tolerances contact TRW, Boone, N.C.

DRJ	0.45	0.25
DRN	1.30	0.70

Discs should not be operated at a maximum surface temperature exceeding 80°C.

VOLTAGE RATING

Maximum rated voltage is 500 volts per inch of current path, but not to exceed power ratings shown above.

RESISTANCE PER SQUARE

While Concentric Disc Resistors should not be ordered in terms of ohms/square it may be desirable for other purposes to determine this value. Following is the formula:

$$\text{resistance/square} = \left(\frac{2.73}{\log_{10}\frac{B}{C}}\right)\left(\text{total resistance}\right)$$

Where B and C are as shown in the figure under DIMENSIONS above.

HOW TO ORDER

Standard Concentric Disc Resistors should be ordered by the disc type, total resistance between silver terminals and resistance tolerance. Special concentric discs should give all dimensions indicated above, total resistance between silver terminals and resistance tolerance.

RESISTANCE STRIPS

DIMENSIONS AND TYPES

IRC Standard Resistance Strips are available in two types as shown in the figure and table below.

DIMENSIONS IN INCHES

Note: a and b areas are silver terminations.

TYPE 1

Length Between Terminals ±.06	Total Strip Width (W) ±.03	Thickness (±.005)
12	0.88	.027
12	1.19	.027
12	1.38	.027
12	1.50	.027
12	1.75	.027
12	2.75	.027

TYPE 2

Width W ±.06	L ±.03	C ±.03	Thickness (±.005)
12	.38	0.88	.027
12	.69	1.19	.027
12	.88	1.38	.027
12	1.00	1.50	.027
12	1.25	1.75	.027
12	2.25	2.75	.027

Special lengths, widths, and thicknesses are available. Consult TRW, P.O. Box 393, Boone, N.C. 28607.

TOLERANCE

Standard tolerance is ±20%. Special Tolerances of ±15% and ±10% are available on special order.

RESISTANCE VALUES

19 ohms/square to 1.0 megohm/square.

COATING

IRC resistance strips consist of a high grade paper base phenolic laminate with IRC resistance material permanently bonded. They can be supplied with a low resistance colloidal silver contact coating over any portion of the surface where a low resistance positive contact is desired. Mechanical pressure type contacts must be used rather than soldered connections.

DEPOSITED CARBON FILM RESISTORS MINIATURE. COATED

R-1/4·R-1/8·R-1/32

Our automated and accurate processing systems turn out nearly 10 million R (coated) type per day.... Originally designed by Toyo Electronics Industry Corp. for general purpose applications in low power equipment and miniature printed-circuits. This R (coated) type is conformally coated with an inner coat of epoxy resin and an outer sheath of melamine resin. Performance characteristics meet all requirement of JIS-C-6402, and greatly exceed those of any composition types.

PRECISION RESISTORS

TEMPERATURE COEFFICIENT

Vishay Resistors are produced by applying a specific bulk metal film of known and controllable properties on glass. This self-compensating system of glass and metal produces a dome shaped TC curve with zero TC at 25°C, and a maximum variation of 1ppm from 0 to 60°C.

TOLERANCE

The Vishay patented process, which combines photoetching techniques and bulk metal film set on glass, permits trimming to extremely high accuracy. Coarse and fine adjustment to tolerances of ±0.005% is standard and ±0.001% is available when resistors are hermetically sealed.

TRACKING

Optimum TC tracking between all Vishay resistors — *regardless of value* — is obtained because all are made of the same alloy, are of identical thickness, and are set in the same manner on glass. Vishay will guarantee TC tracking of their resistors *even when manufactured more than 2 years apart!*

RISE TIME

The etched planar construction of Vishay resistors results in extremely low and reproducible reactance. Settling time is less than 1 nanosecond for individual resistors; when grouped in network form, a typical R/2R ladder of 10 bits will have less than 10 nanoseconds rise time and less than 50 nanoseconds settling time; and no ringing.

STABILITY

Flexible welded ribbon leads and elastomeric encapsulation isolate the resistive element from mechanical stresses, giving the Vishay resistor ultra-high stability. The standard Vishay stability guarantee is 25ppm/yr. (50ppm max. over 3 years); and by hermetically sealing the resistors, Vishay can achieve 5ppm/yr.

1 PPM/°C. (0 to +60°C.) FOR ALL VALUES | **±0.001%** | **1/2 PPM/°C. FOR ALL VALUES** | **1 NANOSECOND** | **5 PPM/YR.**

Other characteristics, including .01% ΔR through Load Life; and non-measurable Noise, make Vishay resistors the most significant breakthrough in advancing circuit design since the transistor.

VICTOREEN RESISTORS

When You Require Precision Resistors for Ultracritical Applications Involving

HIGH VOLTAGE · HIGH IMPEDANCE · HIGH STABILITY · HIGH WATTAGE

TYPE MOX (Metal Oxide Glaze) RESISTORS

Leads are 20 AWG tinned Copper or Dumet. Lead diameter = .020" for MOX-400,750,1125; .032" for MOX 1-5.

Type Number	Resistance Range	Wattage Rating @ 70°C	Max* Oper Voltage	Max. Oper Temp	Dimensions, inches		Encapsulation
					A	B	
MOX-400	2500 megohms	.25	1000 V	220°C	.420±.050	.130±.010	Si Conformal
MOX-750	5000 megohms	.50	2000 V	220°C	.790±.050	.130±.010	Si Conformal
MOX-1125	10,000 megohms	1.00	5000 V	220°C	1.175±.060	.130±.010	Si Conformal
MOX-1	500 megohms	2.5	7500 V	220°C	1.062±.060	.284±.010	Si Conformal
MOX-2	1000 megohms	5	15,000 V	220°C	2.062±.060	.284±.010	Si Conformal
MOX-3	1500 megohms	7.5	22,500 V	220°C	3.062±.060	.284±.010	Si Conformal
MOX-4	2000 megohms	10	30,000 V	220°C	4.000±.060	.284±.010	Si Conformal
MOX-5	2500 megohms	12.5	37,500 V	220°C	5.062±.060	.284±.010	Si Conformal

*Applicable above critical resistance

MOX-1E — MOX-5E in same values with diameter (B) $.315^{+.030}_{-.020}$

2 and 5% available in all values. 1% to 1000 megohms.

Temp Coefficient: This parameter varies with resistance value. Coefficients of 150 ppm in the low resistance values can be maintained, increasing to 2000 ppm in the higher values.

Voltage Coefficient: This parameter also depends on resistance value. Where a low voltage coefficient is required, it is possible to obtain values of 5 ppm or less.

Stability: Better than ±2% for 2000 hours at full load for MOX-400, -750, -1125; better than ±1% for 2000 hours for MOX-1 through -5.

Insulation Resistance: Adequate to 750 volts; with our special epoxy versions MOX-1E — MOX-5E available. This increases to 6000 volts with an attendant loss of power handling capabilities.

Standard Tolerances: For MOX-1 through -5, 1%, 2% and 5% available in all types and values. 2 and 5% available in all values. 1% to 1000 megohms. For MOX-400, -750, and -1125, 1% to 2000 megohms, 2% to 5000 megohms, 5% to 10,000 megohms. ½% in limited values on request.

Varnished Carbon Resistors

HV Series High Voltage Resistors Features—Resistances from .01—25,000 megohms. Power ratings: Radial lug 1—10W; axial lead 1—5W. Max working voltages: Radial lug 3500—40,000 volts; axial lead 3500—30,000 volts.

HP Series High Power Resistors Features—Radial band type. Resistances 0.5—100,000 megohms. Power ratings 12—100W. Max. working voltages 15—125 KV.

HF Series High Frequency Resistors—Elements are applied as a solid coating resulting in low inductance. Features: Resistances 20 ohms—100 megohms. Power ratings: Radial lug 1—10W; radial band 12—90W; axial lead 1—5W. Max working voltages: Radial lug 375—3100; radial band 1250—8500; axial lead 375—1500 volts.

Protective Spark Gaps

Types SGL, SGS, and SGC Series spark gaps are available for designing into equipment a high degree of protection from nearby lightning strikes or other transient producing phenomena. Various configurations and mounting arrangements available. Complete specifications on request.

TYPE RX-1 HI-MEGOHM RESISTORS

Features — Hi-Megohm resistors continue to be Victoreen's forte and the Type RX-1 series is pre-eminent as the most reliable of its type. Manufactured in accordance with MIL-R-14293A, characteristic T. Carbon coated glass rod resistor element banded with silver for electrical contact. Special silicone varnish coating. Noise level negligible. Available in resistances from 10^7—10^{14} ohms. Power rating is 1 divided by resistance in megohms. Tolerance 1% below 10^{12}, 2% and 5% below 10^{13} ohms, 10% over entire range. Max working voltage 1000V. Max ambient temperature 100°C.

Janesville, Wisconsin 53545

Film-Met™ by Amphenol

It's the first major improvement in trimmers since cermets. Film-Met™ is an exclusive Amphenol resistance element* completely different from wirewound and cermet types.

Ends Compromise

This new trimmer won't always replace wirewounds and cermets, which Amphenol also makes. Their characteristics fit many design parameters perfectly. But not all!

For example: Film-Met offers both infinite resolution and low temperature coefficient. Amphenol's new resistance element also provides excellent high frequency and pulse characteristics along with low current and low thermal noise.

Temperature Coefficient

Film-Met has a low TRC of 100 ppm/°C maximum with 50 ppm/°C available on request.

Noise

For applications requiring critical current and thermal-noise levels, Film-Met must be your choice. This is especially true in applications where other components feature low thermal noise. Film-Met is now available for that critical job.

Setability

Film-Met contact setability is improved over cermet because of lower contact resistance variation, and vastly improved over the resolution inherent in wirewound trimmers. The lower CRV of Film-Met results from the smooth metallic element surface overcoated with a noble metal which provides a low resistance interface with the precious metal contact. While wirewound trimmers exhibit an extremely low CRV, the resolution of each turn of resistance wire limits the setability of the contact as compared to infinite resolution trimmers such as Film-Met and cermet.

Other Film-Met Features

Film-Met also should be your choice for high frequency and pulse application because of its excellent performance characteristics in these areas. Due to its high frequency characteristics and infinite resolution, Film-Met can be used for exact impedance matching.

100% Metal Element

Amphenol's exclusive Film-Met element uses the same vacuum deposition process as metal-film fixed resistors.

Continuous monitoring techniques during deposition assure maintenance of established performance levels.

Amphenol's patented Film-Met elements are 100% protected by noble metal overlays. And they're 100% thermally stabilized to provide ultimate performance.

Film-Met trimmers are available in ¾" rectangular commercial — 3811 series; ½" square military — 2901 series; and 1¼" rectangular military — 2851 series.

The Next Step

Now you know a little about Film-Met. What it is, how it performs and how it's made.

Explore the possibilities of this new type of trimmer further.

Write today for evaluation samples and specification sheets. Amphenol Controls Division, Janesville, Wisconsin.

Get fast digital readout from this new low cost miniature Microdial®.

1380 Series

FEATURES . . .

- **Precision digital dial designed for precision potentiometers up to ten turns — yet exceptionally low cost.**
- **Zinc die cast housing and rear cover for demanding applications.**
- **Indexing accuracy is 1 part in 1,000.**
- **Modern styling and small size.**
- **Easy mounting . . . A single set screw mounts dial to potentiometer shaft.**

Amphenol's new 1380 Series miniature digital dial is available in a black finish model 1381 or a fine black-grey hammer finish model 1385. The 1380 accepts a ¼" shaft diameter and modification for a ⅛" shaft diameter is available as a special option. Fingertip brake assures maintenance of critical dial settings. And the 1380 offers you ultra-modern styling to compliment any panel layout.

3100 Series, Digital

Remarkably accurate (1000:1 indexing accuracy) miniature 3100 Series dial almost makes a standard circular dial look gigantic by comparison. This new Microdial measures only 1⅛ x 1 21/32 inches and protrudes only 25/32" from a panel.

Digits (with illumination optional) are magnified by a convex lens in recessed window. Three-digit, ten-turn dial rotates continuously clockwise or counter clockwise with push-pull fingertip brake to lock settings. This 3100 miniature Microdial will mount on panels from 1/16" through 3/16" thick.

Standard color: natural brushed aluminum finish.

Special Options

Amphenol, with the broadest and most versatile concentric scale and digital dial lines in the industry, offers you more than standard units. An example is the 1300 and 1330 series digitals which can be modified to give you such special features as index lines, internal illumination and special readouts. Contact your Amphenol representative for full details.

1300 Series, Digital

Gives you fast, accurate indication of shaft position up to 1,000 turns. All models (3-digit 10-turn, 4-digit 100-turn, and 5-digit 1,000-turn) mount directly on shaft to be controlled, eliminating backlash. Speed: up to 6,000 counts per minute.

Large, contrasting numerals readable even from angular view because convex windows reduce glare, reflections. Rugged, dust-sealed construction includes Cycolac[1] counter wheels, Nylatron[2] GS gear assemblies, knurled aluminum control knobs. Brake optional. Special readouts are also optional. All models conform to military requirements.

[1]Reg. TM Borg-Warner Corp.
[2]Reg. TM The Polymer Corp.

1330 Series, Digital

You get straight-on or angular readout with this illuminated turns-counting Microdial. One-piece lens/window magnifies numerals 1.5x. In exactly 10 turns, unit counts from 000 through 999. Fingertip brake locks settings in place.

This Microdial is sealed against dust yet its snap-on cap makes lamp replacement easy. Standard finishes for color coding: dark or light gray, red, white, and black; other colors available on request.

Single-Turn Potentiometers

Amphenol offers five single turn potentiometers that meet MIL-R-12934 in all requirements. The 2500 potentiometers feature rugged welded terminations; a dual contact wiper that withstands up to 50 g's shock or acceleration; diallyl phthalate construction of rotor, insulator ring and element mount for high stability under varying humidity and temperature environments; and a movable clamp band that allows all phasing and zero settings to be accomplished in the field.

Multi-Turn Potentiometers

Amphenol offers a complete line of precision potentiometers of ⅞" and 2" diameter with 10 turns. Three turn versions are offered in series 205, 2130, and 930. Models range from the high precision, finely-made 900 series to the inexpensive 4100 series. The 900 and 205 series offer precision stainless steel leadscrews, molded windings, and fine linearity adjustment. The 4100 series offers high electrical precision with a durable, simple design which insures long, trouble-free operation at a modest price. Amphenol's line also includes Mil-type and Mil-qualified three and ten turn models.

Many models in our percision pot line lend themselves to a full line of optional features to meet special customer requirements. We invite your inquiries.

4100 Series Potentiometer

FEATURES . . .

- **Improved performance. Dissipates 2 watts 40°C for 1,000 hours.**
- **Over 200,000 revolution life.**
- **Welded gold-plate terminations.**
- **Molded single-piece shaft and rotor produces excellent thermal and dimensional stability.**
- **Phenolic case with molded element grooves assures a perfect helix, high linear accuracy.**
- **Exclusive wiper drive mechanism guarantees zero backlash.**
- **Precious metal spring-loaded wiper prevents corrosion and noise.**

The 4100 miniature ⅞" potentiometer gives you the performance of a high priced unit, yet sells at a low commercial price. A totally new design concept enables Amphenol to eliminate a major cost factor in manufacture of the 4100. With the 4100, you get low cost without compromising on circuit design.

Specify these concentric scale Microdials® for precise potentiometer control

1370 Series, Concentric

Only ⅞" diameter (1" with finger brake), this 10-turn Microdial® projects 29/32" from panel. Don't let the small size of this dial fool you. It has the same silent gear action of the conventional size Amphenol dials. It indicates angular position of potentiometers and multiturn devices of 10 turns and less with 1000:1 indexing accuracy. Inner dial counts turns, outer dial counts hundredths. Locks rigidly on to shaft to eliminate backlash. Epicyclical internal gearing assures readout accuracy. Finger-tip lever offers positive brake action without disturbing critical settings.

1350 Series, Concentric

The 1350, only 1 3/16" diameter, indicates angular position of potentiometers and multiturn devices of ten turns and less with 1000:1 indexing accuracy. Inner dial counts turns, outer dial counts off hundredths. Locks rigidly onto shaft to prevent backlash. Internal gearing is epicyclical type so you always know exact reading. Fingertip brake holds shaft position until reset.

3100 Dial-Pot Assembly

Amphenol's Dial-Pot assembly saves you time and money . . . eliminates costly mounting and phasing. If you now buy pots and dials separately, but for the same application, your production people must (1) mount the pot from back of panel, (2) mount the dial from front of panel, and (3) phase the dial to the pot so the dial reads zero at zero electrical output. Amphenol prephases and preassemblies the 3100 dial to any potentiometer at no extra cost. You simply mount the assembly from rear of panel and wire into your circuit.

Helipot® NON-LINEAR PRECISION POTENTIOMETERS

elipot manufactures non-linear precision potentiometers, iden-
al to linear models in every way except for the resistance
ement. Non-linear models, with outputs ranging from the sim-
est monotonic function to the most complex non-monotonic
nction, can be supplied with either wirewound, cermet or con-
uctive plastic resistance elements. The approximate conform-
y, total resistance and power rating of a Helipot non-linear
otentiometer can be determined by using the following formulas and the constants listed in the table below.

$$\text{Conformity} = (\text{max. slope}) \times (\text{min. practical linearity})$$

$$\text{Total Resistance} = \frac{\text{max. total resistance}}{\text{max. slope}}$$

$$\text{Power Dissipation} = \frac{\text{max. slope}}{\text{power rating}}$$

SINGLE-TURN WIREWOUNDS

	High temperature trimmer with metal housing meets most requirements of MIL-R-22097.	Commercially-priced miniature trimmer available with stops and longer pins.	Low-cost ⅜" square trimmer sealed for PC board washing and potting with low viscosity materials.	Economical ¾" trimmer sealed for solvent cleaning and low viscosity potting.	This adjustment trimmer with sealed plastic housing and RJ11 style pin spacing.

BOURNS INC PRECISION POTENTIOMETERS

ALUMINUM HOUSING

B-LINE™

SINGLE-TURN WIREWOUND, CERMET, BI-FILM™, CONDUCTIVE PLASTIC

The B-LINE series is a new concept in precision potentiometers. Blackboxing — designing for a specific package size — can be accomplished without concern for the type of potentiometric elements to be used. In fact, the element type may be the last thing chosen. Updating — converting existing applications to state of the art elements — is no longer limited by available space behind the panel. The B-LINE potentiometer's extremely thin profile fits anywhere another potentiometer has been used.

Potentiometers in this series are in diameters of 7/8", 1 1/16" and 2", bushing or servo mount. Wirewound, cermet, conductive plastic and BI-FILM™ elements are available in each size — 24 standard models in all, with a choice of 96 variations.

Look at the range of selection: size, mounting and type of element — cermet for exceptional stability, conductive plastic for rotational life, BI-FILM for the best of both, and wirewound for noise-free performance.

MECHANICAL DIMENSIONS

Diameter (Inches)	Length Servo Mount (Inches)	Length Bushing Mount (Inches)	Length Additional Cups (Inches)
7/8	.475	.600	.200
1 1/16	.475	.600	.200
2	.600	.600	.200

BOURNS INC

PRECISION POTENTIOMETERS

COMMON CHARACTERISTICS FOR POTENTIOMETER SELECTION

MECHANICAL LIFE: Mechanical life is measured in terms of change in resistance as the wiper wears away the element during adjustment. Wirewound elements will withstand at least 2,000,000 passes by the wiper with a resistance change of less than 2%. Film-type elements are much more durable. Conductive Plastic elements will allow more than 50,000,000 wiper passes. Cermet, an abrasive film, has a limit of 5,000,000 revolutions. The new BI-FILM™ element offers 25,000,000.

ELECTRICAL LIFE: Electrical life is measured in thousands of hours of service. If there were no other factors to consider, such as changes in ambient environment, or continued mechanical wear, the electrical life of any operating element would be almost infinite. But combined effects of humidity, high and low ambient temperatures, mechanical shock, mechanical vibration, and unusual operating conditions eventually degrade the electrical characteristics beyond the point of usefulness.

EFFECTS OF HUMIDITY: High humidity affects wire elements by causing a high resistance, polarized short, resulting in electrolytic corrosion of the wire and eventual burnout. Conductive Plastic, on the other hand, acts as a humistat, absorbing and releasing moisture vapor according to the weather and resultantly changing as much as 10% in total resistance. If it is selectively absorbed, the moisture causes one part of the element to have a lower resistance than another part, thereby severely affecting linearity. Cermet, a fired ceramic and metal material, is virtually unaffected by humidity. The BI-FILM element shows very little effect.

TEMPERATURE COEFFICIENT: Changes in temperatures also affect the total resistance of the element, thereby changing the power requirements. This effect is measured in terms of temperature coefficient, or change in resistance in parts per million per degree centigrade. Wire is inherently superior in this respect. Temperature coefficients in the ±20ppm/°C to ±70ppm/°C range are common. Film elements have much greater coefficients.

MAXIMUM TEMPERATURE: High ambient temperatures combine with the dissipated power to overheat the element or the insulation materials in the potentiometer. Cermet offers superior performance. It will stand 150°C easily, and up to 200°C in some special applications. Conductive Plastic itself and the plastic insulation of the wirewound units are limited to 125°C. Still lower maximum temperatures are characteristic of industrial potentiometers.

MECHANICAL SHOCK AND VIBRATION: Performance is the result of a compromise between tight mechanical tolerances and stiff, high-pressure wipers on the one hand and mechanical wear and high torque on the other. In general, Bourns standard units will withstand 50Gs shock and 15Gs vibration without damage or intermittent wiper continuity.

WIPER CURRENT: A potentiometer with any of the film-type elements exhibits an unpredictable and uncontrollable variation in output (termed "Contact Resistance Variation") as a result of current flowing through the wiper. Only extremely low wiper current (a few microamps) may be drawn from conductive plastic elements without severely damaging the element. For these reasons, wirewound elements are recommended for all applications in which there is a significant wiper current. Film-type elements are used primarily for voltage-balanced systems for high impedance circuitry.

LOADING ERROR: Conformity to the desired function is also affected by low resistance in the wiper circuit. This resistance acts to shunt a part of the element, resulting in a non-linear relationship between wiper position and output voltage. This is known as loading error. It is greatest when voltage output from the wiper is 67% of the maximum voltage applied to the element. For a load ratio of 100:1, the loading error would be .15%. For a load ratio of 10:1, the error would be 1.5%. This error is additive to conformity tolerance in establishing the expected accuracy of the unit. If the resulting performance is beyond system limits, a more expensive non-linear element may be required to compensate for the load.

NON-LINEAR FUNCTIONS

The curves shown here are indicative of the varied selection of standard functions offered in single and multi-turn wirewound and conductive plastic precision potentiometers. These functions and conformities are described in our brochure, "Bourns Standard Non-Linear Functions," number N.F./J/1.

LABPOT™ POTENTIOMETERS

3660

The Model 3660 LABPOT potentiometer with its unique "clock-dial" face and the Model 3665 LABPOT potentiometer with a three-place digital readout are precision units designed for a variety of circuit development and educational applications. Large, five-way binding posts facilitate fast hookup of any leads. Each unit is fused for protection against burnout and an extra fuse is furnished inside the case.

SPECIFICATIONS

Std. Resistances:	100Ω 1K, 10K, 100K (others available on request)
Resistance Tolerance:	±1%
Dial Accuracy % VR	.20% 100Ω, .15% 1K, .10% 10K and 100K
Repeatability:	±.05% voltage ratio
Operating Temp. Range:	−65 to +85°C
Power Rating:	2.5W at room temp.
Mechanical Life:	200,000 dial rev.
Weight:	14 ounces

Model	10-24 Pieces	Model	10-24 Pieces

MOUNTING HARDWARE

H-01 — 1½, 2-56 machine screw
H-02 — 2-56 Stainless steel rod stock (12" length only)
H-03 — 2-56 Hex nut, stainless steel for use on H-01 and H-02
H-04 — 1-72 machine screw, 1" long
H-05 — 1-72 hex nut, stainless steel (for use on H-04)
H-12S — Stainless steel side bracket for models with 1" mounting centers
H-15S — Stainless steel side bracket. For all Bourns models having 0.830" mounting centers
H-22S — Stainless steel side bracket for models with ¾" mounting centers
H-25 — Stainless steel stacking straps for models with 0.520" mounting centers
H-11E — Stainless steel end bracket for models with 1" mounting centers
H-21E — Stainless steel end bracket for models with ¾" mounting centers
H-26S — Stainless steel side bracket models with 0.520" mounting centers
H-24S — Stainless steel stacking straps with threaded holes. For all Bourns models having 0.520" mounting centers
H-28S — Stainless steel stacking straps for models having .419" mounting centers

PANEL MOUNTING

Most models are available with the added convenience of panel mounting. Unique design permits quick factory conversion of "off the shelf" units. Clip brackets, mounting brackets and mounting screws are available for other mounting requirements.

NOTES

[1] Key to terminal types: J=Printed Circuit. L=Insulated stranded leads. S=Solder Lugs (includes panel mount bushings on models 3300S, 3301S, 3367S, 3368S only). P.Y=Printed circuit pins (flat mounting). W=Printed circuit pins (edge mounting). Additional worm gear terminal classification: W-66=Printed circuit pins (edge mounting-side adjustment).
[2] Local distributors quote prices to 500 pieces. Contact local office for prices in higher quantities.
[3] The following resistances are standard if they fall within the limits listed: Wirewound — 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 25K, 50K, 100K. CARBON — 5K, 10K, 20K, 50K, 100K, 200K, 500K, 750K, 1 Meg., 2 Meg., 5 Meg. CERMET — 10, 20, 50, 100, 200, 500, 1K, 2K, 5K, 10K, 20K, 50K, 100K, 200K, 500K, 750K, 1 Meg. Other resistances available on special order.
[4] Closer tolerances available on request except commercial models.
[5] All models are sealed against sand and dust.
[6] Humidity-proof versions available on special order. Contact factory for part number price and delivery.

ALLEN-BRADLEY
Milwaukee, Wisconsin 53204

Hot Molded Composition and Cermet Variable Resistors.

The Allen-Bradley name on variable resistors means quality performance that helps protect the reputation of the equipment you manufacture.

The key to quality in A-B composition variable resistors is an exclusive hot-molded resistance track. This molded track has a large cross-section that results in low current densities for improved short-term overload protection and a long operating life. Control is smooth, resolution is almost infinite, and the low initial noise level actually decreases with use. Since they are essentially non-inductive, they can be used at higher frequencies where wire-wound units are impractical.

All composition types are available in five standard tapers (linear, modified linear, CW modified logarithmic, CCW modified logarithmic, and CW exact logarithmic). Special tapers can be provided.

The dual and triple section Type J, and the dual section Type GD are ideally suited for attenuator applications. Special resistance values can be supplied.

Types J and K are 1-5/32 inches in diameter and are suitable for both military and commercial applications where high reliability is of prime consideration. The Type J operational life is in excess of 100,000 cycles with less than 10-percent resistance change. This is the most thoroughly "field tested" (over 20 years) variable resistor available. Types G, L, W, and GD are ½-inch diameter and are designed for critical applications where space is a factor.

Type J and G are MIL-R-94 approved for Styles RV4 and RV6 respectively.

Type J is available in single, dual and triple configurations. The single and dual J can be provided with SPST, SPDT and DPST switches. Type G is available with or without a SPST switch. Type GD is a compact dual section control. Types K and L are high temperature versions of Types J and G, respectively.

Type Q features Allen-Bradley's proprietary cermet resistance material. It is designed for severe environment applications in military and industrial equipment. Only ½ inch in diameter, it can dissipate 0.5 watt at 125°C. Resolution is almost infinite with an operational life in excess of 50,000 cycles with less than 5-percent resistance change. The linear taper is standard.

Standard Options for all types include a wide variety of shaft endings, shaft lengths, bushings and appropriate hardware.

	Type	Range and Tolerance	Power Rating	Voltage Rating (rms or dc)	Operating Temperature Range	Electrical and Mechanical Rotation	Configurations	Dimensions	Enclosure
	Composition J (RV4)	50 ohms—5.0 megohms ±10% ±20%	2.25 W @ 70°C	500 V	−55°C to +120°C	312°	Single* Dual* Triple *w or w/o SPST	5/8 inch deep by 1-5/32 inch dia. (single section)	Dust-tight and splashproof
	Composition K	(Special values to 1000 megohms available for Type J)	3.0 W @ 70°C		−55°C to +150°C		SPDT and DPST switch on type J only.		
	Composition G (RV6)	100 ohms—5.0 megohms ±10% ±20%	0.5 W @ 70°C	350 V	−55°C to +120°C	295°	Single section w or w/o SPST switch	15/32 in. deep by 1/2 inch dia.	Immersion-proof
	Composition L		0.8 W @ 70°C		−55°C to +150°C		Single section		
	Composition W	100 ohms—5.0 megohms ±10% ±20%	0.5 W @ 70°C	350 V	−55°C to +120°C	295°	Single section	15/32 in. deep by 1/2 inch dia.	Immersion-proof
	Composition GD (Dual)	100 ohms—5.0 megohms ±10% ±20%	0.5 W @ 70°C	350 V	−55°C to +120°C	295°	Dual section	35/64 in. deep by 1/2 inch dia. (dual section)	Immersion-proof
	Cermet Q	50 ohms—2.5 megohms ±10% ±20%	0.5 W @ 125°C	350 V	−65°C to +175°C	295°	Single section	15/32 in. deep by 1/2 inch dia.	Immersion-proof

ALLEN-BRADLEY

Milwaukee, Wisconsin 53204

Hot Molded Composition and Cermet Trimmers.

Allen-Bradley trimmers are designed for you to install, set, and forget. Easy, pinpoint control and dependable stability are two of the best reasons why A-B's family of variable resistors are specified for high quality electronic equipment. A-B trimmers give you smooth adjustment at all times with almost infinite resolutions. There are no abrupt changes in resistance to produce transients (common to wire-wound trimmers).

These rugged and compact trimmers will satisfy the most demanding requirements. Their continuous, stepless resistance control makes possible easy, accurate adjustment. Since they have low distributed capacitance, and are relatively non-inductive, regardless of resistance value, Allen-Bradley trimmers can be used in applications where the ordinary wire-wound types are entirely unsatisfactory.

TYPES F, FD, O, Y, R, and N feature Allen-Bradley's exclusive hot-molded composition technique. The resistance material, collector track, insulation and metal terminals are all molded into one integral structure. No cracks or crevices for moisture to gain admittance. The dual-section Type FD is ideally suited for Bridged-T or L-Pad attenuator applications. Linear tapers are standard; however, other tapers and special resistance values can be supplied.

TYPES S and Z are cermet trimmers, designed for severe environment applications. A-B proprietary cermets have exceptional stability in high temperature and high humidity environments. Leads are permanently anchored and bonded.

Standard options include vertical or horizontal mounting, panel mount bushing, and thumb-wheel adjustment, depending on type of trimmer.

	Trimmer Type	Element and Adjustment Turns	Range and Tolerance	Power Rating	Operating Temperature Range	Voltage Rating (rms or ds)	Dimensions L H W	Terminal Types	Enclosure
	Type F	Composition Single turn	100 ohms—5 Megohms ±10% ±20%	0.25 W @ 70°C	−55°C to +120°C	350 V	1/2 Dia. x 17/32	Pin or Solder Lug	Immersion-proof
	Type FD (Dual)	Composition Single turn	100 ohms—50 Megohms ±10% ±20%	0.25 W @ 70°C	−55°C to +120°C	350 V	1/2 Dia. x 21/32 (dual section)	Front Section-Solder lug only. Rear-Pin or Lug Optional.	Immersion-proof
	Type O	Composition Single turn	100 ohms—5 Megohms ±10% ±20%	0.4 W @ 70°C	−55°C to +150°C	350 V	1/2 Dia. x 17/32	Pin or. Solder Lug	Immersion-proof
	Type Y	Composition Single turn	100 ohms—5 Megohms ±10% ±20%	0.25 W @ 50°C	−55°C to +100°C	350 V	1/2 Dia. x 23/64	Pin (Solder Lug on snap-in version only)	Dust-tight and Splash-proof
	Type R (RJ11)	Composition 25 turn	100 ohms—2.5 Megohms ±10% ±20%	0.25 W @ 70°C	−55°C to +125°C	300 V	1-1/4 x 23/64 x 1/4	Pin or Solder Lug	Immersion-proof

CARTER manufactures many custom variations of these rectilinear potentiometers. When requesting quotations please specify stroke, resistance, linearity, any taps, any switching, environmental requirements and quantity.

Wire wound and conductive plastic elements can also be furnished for special requirements.

SWITCHES

CARTER manufactures custom made switches in conjunction with potentiometers or as enclosed wafer types. They may be simple angle indicators or precision commutators. Such applications requiring high precision, miniaturization and sophisticated switching functions have been solved, many within the parameters of common switch approaches. CARTER's unique switch engineering has supplied the answer when the number of poles or contacts are in contradiction with the available space. When interconnections become a problem they can be greatly reduced by custom designed internal interconnections increasing reliability and improved appearance.

Amperex Resistors VARIABLE NON-LINEAR

CARBON POTENTIOMETER

Reliable trimmers, despite small size and low cost, for tube or transistorized PCs. Consist of annular carbon track riveted to base plate of resin bonded paper. Screw driver slot or plastic knob for readjustment. Available in seven mechanical types.

Dimensions

Type	Length	Width	Depth
E097	0.787	0.709	0.177
E086	0.394	0.394	0.150
	Diameter		Depth
440	.488 ± .002		.205 ± .008

Type E086: Linear Resistance Range: 100Ω to 1M ±20%: 13 ranges

Effective angle of rotation ..... 240 ±5°
Maximum permissible power dissipation (of total resistance) at an ambient temperature of 40°C 0.1W
Permissible ambient temperature range ..... −30° to +70°C

Type E097: Linear Resistance Range: 100Ω to 4.7M ±20%: 15 ranges

Effective angle of rotation ..... 220 ±5°
Maximum permissible power dissipation (of total resistance) at ambient temperature of 40°C 0.25W
Permissible ambient temperature range ..... −30° to +70°C

Type 440: Linear Resistance Range: 4700Ω, 10KΩ, 22KΩ, ±20%

Nominal resistance values 4.7K, 10K, 22K
Resistance law ..... linear and logarithmic
Working temperature range ..... −10° to +70°C
Life expectancy ..... in excess of 15,000 cycles

(Available with ON-OFF switch as Type 441)

CARBON PRE-SET POTENTIOMETER

Application:
These potentiometers have been designed for pre-set resistance adjustment in capacitance diode television tuners. However, they can also be applied for capacitance diode tuning of other apparatus, e.g. radio receivers, or for any other fine resistance adjustment.

Construction:
The straight carbon track is fitted in a housing of black synthetic resin. The slider, which is connected to the centre contact, is activated by a silvered brass spindle. No damage occurs when one continues to turn the spindle after the slider has reached the extreme position. For adjustment the spindle is provided with a plastic knurled wheel.
The potentiometers are suited for mounting on printed-wiring boards.

Technical Performance

Nominal resistance values ..... 10K-25K-50K-100K others as requested
Tolerance on the nominal resistance ..... ±20%
Maximum permissible dissipation at 70°C (P_n) 0.125W
Maximum current through slider contact ..... 1 mA
Voltage range between pins 1 and 3 (or 4) at a voltage of 30 V_{dc} connected to pins 1 and 2 ..... 0.1±0.1 to 29.5+0.5 V_{dc}
Limiting voltage ..... 100 V_{rms}
Setting stability at ΔT_{amb} = 30°C and 0.1 P_n ..... ≤0.1%
Setting stability after damp-heat test (21 days, T_{amb} = 40°C, R.H. = 90—95%) and at 0.1 P_n ..... ≤0.5%
Repeatability (clockwise or counterclockwise) 0.1%
Operating-temperature range ..... —10 to +70°C
Operating torque ..... 0.5 — 1 Ncm
Number of effective operating turns 20
Life ..... max. 1000 cycles

VOLTAGE DEPENDENT

Most important property is the non-linearity between their resistance and the applied voltage. Voltage dependency is due to contact resistance between the silicon carbide crystals. Crystal contacts form a network of series and parallel resistors which determine the electrical characteristics.

Available Types

Disc types available: 0.8W to 3W
Rod types available: 0.7W

Applications

VDRs can be used in spark suppression and contact-protection applications, as well as in series with a resistor for voltage stabilization. Although the stabilizing circuit with a VDR cannot compete with more elaborate circuits, it has vital advantages of simplicity and small space adaptability.

POSITIVE TEMPERATURE COEFFICIENT THERMISTORS

PTC Thermistors increase in resistance as the temperature increases. PTCs are disc shaped with connecting leads and are lacquer coated for protection against atmospheric influences.

Available Types

Standard Discs 1W 40 to 50V series
Standard Discs 0.5W 25V series

Applications

Resistance changes of 10%/°C or better permit the use of PTCs wherever any of the following factors are decisive: ambient temperature; dissipated power; inertia of PTC and positive temperature coefficient.

NEGATIVE TEMPERATURE COEFFICIENT THERMISTORS

NTC thermistors are resistors which exhibit a high negative temperature coefficient of resistivity. They are made of semiconducting oxidic materials. The resistance of the oxides decreases rapidly when the temperature rises.

Available Types

Rod Type
Disc Type
Miniature Bead Type
Special Types for Automobiles
Special Types for Radio and TV

Applications

Resistance changes of 3% to 6% per °C permit the use of NTCs in applications such as: ambient temperature measurement and control; resistance determined by dissipation and time delays.

Centralab potentiometers and trimmers are available in the size, resistance wattage and styles you need!

Request your copy of this potentiometer catalog through Centralab's advertising department.

Below is a brief summary of the types listed in our sixty page potentiometer catalog. These potentiometers are in many cases available ganged and with either front or rear mounted wafer switches as well as rear mounted line switches. Special tapers for almost every application are already available.

Most of these potentiometers have dustproof construction. Equivalent noise resistance of as low as ½% of nominal maximum resistance is available.

Many models are available with numerous mountings and terminal configurations, enabling easy fitting into printed circuit boards or wired construction.

Diameter Inches	Rotation Mechanical	Resistance Range, Ohms	Tapers	Terminals	Power Rating	Application Mil.	Com'l.	Ind.

Digilog
PRECISION POTENTIOMETERS

A product family in which Digilog can quickly meet your needs for

- NON-LINEAR FUNCTIONS
- SPECIAL CONFIGURATIONS
- APPLICATION ENGINEERING KNOW-HOW

Need custom winding or non-standard configurations? Do you have problems with "dry circuit" noise, high wiper currents, special temperature or radiation environments? Digilog has both know-how and facilities to come up with the solutions — fast.

Single turn sizes 14-30

Single turn, sizes 8-11

Multi-turn, size 9

Shaft diameters, ⅛" and ¼"
Servo, bushing and screw mounting types
Power ratings, 1.5 to 7.5 watts
Temp. range, −55°C to +125°C

Temp. coefficient of resistance, +50 PPM/°C nominal
Stnd. resistance tolerance, ± 3%
All models comply with applicable paragraphs of MIL-R-12934
For special requirements, submit drawings and specs or request application data sheet

LECTRIM™ CERMET TRIMMING POTENTIOMETERS

ELECTRA/MIDLAND's new precision cermet materials have been combined with some innovative design to create this growing line of tiny, tough, infinite-resolution trimmers. Many units are now on the QPL list, and many are available with the patented pressed-in-shaft construction (ask your E/M rep about this!).

CERMETRIK THICK FILM RESISTOR NETWORKS (DUAL-IN-LINE PACKAGE)

ELECTRA/MIDLAND cermet is used in making thick film networks. Passivation is accomplished by screening with a glass material. Electra technology offers the advantage that substrate, cermet, and passivation materials have almost identical expansion coefficient, hence networks can be provided with superior TC or R characteristics.

1. Resistance Range . . . . . 10 ohms to 1.5 megohm
2. Resistance Tolerance . . . . . ±1% to ±10%
3. Number per Network . . . . . Up to 13 depending upon circuit.
4. Absolute TC of R . . . . . ±100 PPM/°C, −55°C to 125°C
5. Tracking TC of R . . . . . ±25 PPM/°C, resistors with 20:1 R ratio within a package.
6. Matching of Resistance . . . . To ±.1%
7. Package . . . . . 14 Pin DIP Ceramic, Epoxy Sealed, 1 watt @ 70°C.
   14 Pin DIP Plastic, ½ watt @ 70°C.

A TRANSITRON COMPANY

e|s|i® precision decades and components

Electro Scientific Industries makes available panel mount decades, dividers and individual resistors that provide the nucleus components for all our precision measurement and calibration equipment (see Section 2900). The patented Dekadial® stacked decades save panel space at 0.02% accuracy in the decades, 20 ppm for the dividers. Solid silver-alloy switches are used throughout, plus silicone-treated ceramic switch wafers. The wire-wound resistors are produced by a proprietary winding aging process for highest precision and stability.

Resistive Decades

DS 12 Individual Decade Resistor

Nine different total resistances available for DC and audio frequency applications. Can be used as a divider by cutting jumper.

Dekastats®

DS 1365 Precision Dekastat

Three coaxial decades available in four different total resistances.

MODEL	DESCRIPTION	PER STEP	TOTAL RESISTANCE	NOMINAL ACCURACY	PRICE
DS 12	Single 10-step resistance decades	0.01 Ω—1 MΩ	0.1 Ω—10 MΩ	0.02%	$25.—$110.
DS 1265	Decade resistor, coaxial 2 decades plus rheostat	0.1, 1, 10 Ω/dial div.	1.2, 12 kΩ	0.02%	95.
			120 kΩ*	0.02%	115.
DS 1365	Decade resistor, coaxial, 3 decades	1, 10, 100 Ω	1.2, 12, 120 kΩ	0.02%	95.
		0.01 Ω	120 Ω*	0.02%	120.
DS 1463	4 dial coaxial, 3 decades plus rheostat	0.1, 1 Ω/dial div.	12, 120 kΩ	0.02%	110.
DS 1464	Decade resistor—4 decade coaxial	0.1, 1 Ω	1.2, 12 kΩ	0.02%	115.
		10 Ω	120 kΩ	0.02%	125.
		0.01 Ω, 100 Ω	120 Ω, 1.2 MΩ*	0.02%	150.

*Special order

Dekapot® Dividers

DP 1311 Decade Potentiometer

Kelvin-Varley linearity is guaranteed 20 ppm stable/yr. Three decades plus 100-division potentiometer gives resolution of 0.0003%. Three different values available.

Dekatrans®

DT 1145 Miniature Decade Ratio Transformer

Dekatrans are inductive voltage dividers for use at audio frequencies. High input impedance, low output, and low phase shift make it ideal for testing voltage and current division, turns-ratio measurement, divider calibration and impedance comparison.

MODEL	DESCRIPTION	VALUE OR RATIO	LINEARITY	PRICE
*DV 411	Resistive divider, adjustable base, 3 decades plus pot	1 kΩ	20 ppm	$240.
		10, 100 kΩ	20 ppm	195.
DP 1211	Panel-mounting—coaxial dial decade potentiometer (Kelvin-Varley); 2 decades plus pot	1, 10 kΩ	20 ppm	100.
		100 kΩ*	20 ppm	115.
		1 k to 100 kΩ*	20 ppm	150.
DP 1311	Decade potentiometer—3 decades plus pot	1, 10, 100 kΩ	20 ppm	150.
		1 kΩ to 100 kΩ	20 ppm	180.
DT 1135	Panel mounting ratio transformer—2 decades plus pot	1.1105	100 ppm	190.
DT 1145	Panel mounting ratio transformer—3 decades plus pot	1.11100	10 ppm	260.

*Special order

Precision Wirewound Resistors and Resistor Networks

Wirewound Resistors

A special ageing process ensures stability to 0.005% standard, or 0.001% on the best available. Standard accuracy is 0.01%, but 0.0015% is available. Changes in environment have little affect and ac residuals are low. Come in open frames (RF), encased in daillyl phthalate (RC) or hermetically sealed cases (RH).

Custom Resistor Networks

Ideal for solving problems in ratio, temperature coefficient matching and special packaging. Economical and backed by 2-year warranty. Packaging available in variety of configurations, from low cost terminal boards to MIL-approved, hermetically sealed units. Ratios of 1:1 matched to 0.0002%; temperature coefficients matched to 1 ppm/°.

MODEL		08TC, 08TW	12TC, 12TW	16TC, 16TW	20TC, 20TW
Size		½ Dia.	¾ Dia.	1 Dia.	1¼ Square
Resistance/inch Stroke		100-20K	100-30K	100-40K	100-40K
Lin. Std. Ind.	Up to 6"	±0.5	±0.5	±0.5	±0.5
	6" and up	±0.25	±0.25	±0.25	±0.25

MP —Modular type precision potentiometers.
WB —Single turn precision wire wound metal-cased trimmer potentiometers.
W —Single turn precision wire wound metal-cased potentiometers.
C —Single turn precision conductive plastic metal-cased potentiometers.
SC —Single turn precision wire wound Sine-Cosine potentiometers.
WW —Wire Wound **TW** —Wire Wound
CP —Conductive Plastic **TC** —Conductive Plastic

NOTE: Precision units are usually supplied with servo mounting flanges. Bushing or 3-hole mountings are available when specified.
All except RL models and the "A" plastic-cased models may be ganged.

MARKITE®

The Originator of PRECISION . . .

. . Conductive Plastic POTENTIOMETERS

PRODUCT CONCEPTS

LIMLINE(TM)

recision Conductive Plastic Potentiometers

arkite's precision engineering and rigid manufacturing ontrols has achieved unusually high performance, reliability

and design latitude in the development of Slimline (TM) conductive plastics potentiometers. The Slimline series is available from 1-1/16″ dia. to 3″ dia. in standard servo mounts. Each additional cup adds only 2/10″ in depth. Complete mechanical and electrical specifications are available on request.

ROTALIGN(TM)

nitized Rotary Controls

arkite's new concept offers systems manufacturers a omplete assembly of one or more precision plastic poten-

tiometers mated with other rotary components on a common shaft. Conventionally, the assembly of these components into one system required the manufacturer to mount each component individually, with frequent loss of accuracy, misalignment or coupling errors, now eliminated by Markite's unitized system.

LASTIC STRIPS AND DRUMS

ngineered for Precision Performance

arkite's conductive plastic strips and drums are currently mployed as replacements for slide-wires in industrial re-

corders and controllers, as well as axis positioning on machine tools and other industrial equipment such as x-ray machines. Markite conductive plastic is especially adaptable in applications requiring consistent low noise.

SINE-COSINE POTENTIOMETERS

limline Rotary Precision

arkite's rotary sine-cosine precision potentiometers are more precise, predictable in system use, over a much longer

life than conventional potentiometers. They are especially useful in applications requiring consistently low noise, such as in read-out display devices and analog computers. Because they utilize Markite's space-saving Slimline (TM) multi-cup units can be used where space is at a premium.

PERFORMANCE FEATURES

- **Infinite resolution.**
- **Multi-million Cycle system life.**
- **Rugged one-piece molded element.**
- **Eliminates possibilities of opens and shorts.**
- **Standard accuracy ± 0.5%. Special accuracy to ± 0.01%.**
- **No wiper bounce in extreme environment.**
- **Consistent, uniform low noise through system life.**
- **Insignificant quadrature effect.**
- **Prototype performance assured by precision manufacture.**
- **Non linear outputs.**

THE MARKITE LINE

Markite—originator of conductive plastics—offers the industry's most comprehensive line of single and multi-cup rotary and rectilinear conductive plastic precision potentiometers with linear or non-linear outputs.

Requirements for unusual electrical and mechanical characteristics for aerospace, high temperature, underwater or other critical military and industrial applications are readily met.

Single-Turn Rotary Conductive Plastic Precision Potentiometers

- from ½″ through 5″
- standard series (rear or side terminals) or space-saving Slimline series (side terminals)
- servo, panel or special mounts
- special cables or connectors as required
- ganging of almost any number of cups to a common shaft
- single or double shaft extensions

Rectilinear (Translatory) Conductive Plastic Precision Potentiometers

- 1″ through 10″ stroke; longer lengths available
- circular or rectangular cross-sections
- single or multiple resistance elements
- special cables or connectors as required

Conductive Plastic Precision Resistance Elements

- side-wire strips, drums, and sector elements of infinite resolution. Markite conductive plastic assures greater design flexibility, multi-million cycle life.
- strips available up to 72″, flat or manufactured as o.d. of round drum; other configurations to meet customer requirements.

SINGLE-TURN CONDUCTIVE PLASTIC AND WIREWOUND PRECISION POTENTIOMETERS

- AVAILABLE WITH LINEAR OR NONLINEAR FUNCTIONS
- AVAILABLE WITH MULTIPLE TAPS
- AVAILABLE IN SINGLE OR MULTI-CUP CONFIGURATIONS
- AVAILABLE IN SERVO OR BUSHING MOUNTS
- AVAILABLE WITH OTHER COMPONENTS DESIGNED-IN (SPRING-RETURNS, STOPS, SWITCHES, MOTORS, ETC.

RELATIVE MERITS OF CONDUCTIVE PLASTIC VS. WIREWOUND

The major advantages of conductive plastic potentiometers over wirewounds are infinite resolution and longer life. In most other respects, the two types are comparable. NEI has made it a strong point over the years to maintain **balanced** capability in conductive plastic and wirewound potentiometers. Each has its advantages in given applications, and NEI is the **only** company that can objectively recommend and supply **either** type.

GENERAL SPECIFICATIONS — CONDUCTIVE PLASTIC

Resistance Tolerance
Standard: ±10%

Ambient Temperature Range
Standard: −55°C to +150°C

Bearings
Stainless steel ball bearings are standard.

Mechanical Rotation
Normally continuous; however, stops are available.

Electrical Function Angle
Standard: 340° ±5°

Travel Resolution
Essentially infinite

Life
50 million revolutions

SERIES	DIAMETER	NOMINAL RESISTANCE RANGE	NOMINAL POWER RATING	MAXIMUM STARTING TORQUE	NOMINAL ACCURACY
55 FT	½″	1K to 10K	0.5 W @ 25°C	0.35 oz-in	±1.0%
34 FT	¾″	1K to 20K	1.0 W @ 25°C	0.35 oz-in	±0.75%
78 FT	⅞″	1K to 25K	1.0 W @ 25°C	0.35 oz-in	±0.75%
116 FT	1 1/16″	1K to 50K	1.0 W @ 25°C	0.35 oz-in	±0.5%
176 FT	1 7/16″	1K to 75K	1.5 W @ 25°C	0.50 oz-in	±0.5%
158 FT	1⅝″	1K to 75K	2.0 W @ 25°C	0.50 oz-in	±0.5%
200 FT	2″	1K to 100K	3.0 W @ 25°C	0.75 oz-in	±0.3%
300 FT	3″	1K to 100K	5.0 W @ 25°C	1.0 oz-in	±0.25%

VALUES SHOWN ABOVE ARE NOMINAL. FOR SPECIFIC REQUIREMENTS, REFER TO NEI'S COMPLETE CATALOG OR CONTACT OUR APPLICATIONS ENGINEERING DEPARTMENT.

PRECISION CONDUCTIVE PLASTIC ELEMENTS

NEI can supply elements for any customer requirement; including linear and rotary motion, linear or nonlinear functions, and radial sector or full rotary elements. Elements can be molded to meet virtually any packaging requirement, and can be supplied with matching wiper arm assemblies.

GENERAL SPECIFICATIONS — WIREWOUND

ELECTRICAL CHARACTERISTICS — ALL MODELS

PARAMETER	VALUE	REMARKS
Resistance	1K, 5K, 10K	See table
Linearity	1%, 0.5%, 0.25%	See table
Electrical angle	340° ±5°	
Output smoothness		As per MIL-R-39023
Rotational Life (Servo)	10,000,000 revolutions	without catastrophic failure
Resolution		Essentially infinite
Minimum Voltage		As specified in MIL-R-39023
End Voltage	0.5% of total applied voltage, maximum	As specified in MIL-R-39023
Power Rating	1 watt at 70°C derated to 0 at 125°C	As per Class 5 of MIL-R-39023
Insulation Resistance	1000 megohms minimum	As specified in MIL-R-39023
Dielectric Withstanding Voltage	750 volts rms	As specified in MIL-R-39023 for units less than 1¼" diameter
Resistance Tolerance	±10%	

ENVIRONMENTAL CHARACTERISTICS — ALL MODELS

PARAMETER	VALUE
Temperature Cycling	Test condition C, Method 102 of MIL-STD-202C
Operating Temperature	−65°C to +125°C
Humidity Cycling	Will meet MIL-R-12934 for Class 5 units
Salt Spray	Will meet test as specified in MIL-R-12934
Shock	50G, 11 milliseconds as per MIL-R-12934 Test Condition C
Vibration	0.06 inches double amplitude or 15G, whichever is less, from 10-2000 cps, as specified in MIL-R-12934, Test Condition B

DESIGN OPTIONS

1. Center Tap: (Voltage tap located at 50% plus or minus the linearity tolerance)
   ADD the following prices:
   Linearity:
   (a) ± 5% ..... $ 2.00
   (b) ± 1% 5.00
   (c) ± .5% 5.00
   (d) ± .25% 7.50
2. Shaft Variations: Standard is ⅛" Diameter:
   (a) Shaft Diameter ¼" (servo only) requires 1/16" longer shaft than standard ..... ADD $3.00
   (b) Shaft length up to 2" (standard ⅛" diameter) ..... ADD $2.00
   (c) Screw driver slot shaft end: ADD $1.00
   (d) Shaft ground flat on one side: ADD $2.00
3. Electrical angle other than standard:
   (Standard 340° ± 5°)
   Engineering charge per order $70.00
   ADD per unit 5.00
4. Torque Requirements (standard 0.5 oz.-in.):
   (a) Low torque (servo mounted units only) down to 0.2 in.-oz. minimum ..... ADD $5.00
   (b) High torque (bushing mounted units only) up to 6 in.-oz. ADD $5.00
5. Linearity (Standard .25%, .5%, 1%,) 5.0% linearity or greater with resistance tolerance ± 20%
   Deduct $2.00
6. Linearity accuracies greater than 0.25% with standard resistance tolerance ..... prices on request.
   Resistance tolerances better than 10% ..... prices on request.

CONDUCTIVE PLASTIC FUNCTION GENERATOR KIT

FEATURING A NEW FLEXIBLE CONDUCTIVE PLASTIC MATERIAL THAT ENABLES SCIENTISTS, ENGINEERS, & STUDENTS TO MAKE THEIR OWN LINEAR & NON-LINEAR INFINITE RESOLUTION RESISTIVE TRANSDUCERS

Conveniently packaged for book-case storage

Contains everything needed to make your own potentiometers

New flexible conductive plastic material (PATENT PENDING) enables you to cut complex element shapes for virtually any required electrical function in a 1K to 40 K resistance range.

You can cut linear or nonlinear elements for rotary pots up to 2" diameter or for linear motion applications up to 5" stroke.

Develop your own working prototype potentiometers. Save time and cost, and prove out your requirements in advance.

Note: the shaft can be rotated without detrimental effect to the unit.

OHMITE has the answer in wirewound rheostats

Twelve sizes in wirewound, vitreous enameled rheostats are stocked by Ohmite distributors all over the country and at the Ohmite factory. This selection, the most extensive available to industry, covers ratings that meet the major portion of design, production and emergency needs. Ratings of 7½, 12½, 25, 50, 75, 100, 150, 225, 300, 500, 750 and 1000 watts are standard.

FEATURES OF CONSTRUCTION: Ohmite rheostats are designed to produce permanently smooth, close control. The construction is all ceramic and metal; there is nothing to smoke, char, shrink, or shift. All models have insulated shafts with provision to keep the rheostat from turning on the panel. The resistance wire is wound over a solid ceramic core. Each turn is a separate resistance step and is locked against shifting by vitreous enamel (except Model C). The core and base are also bonded by vitreous enamel. The pivoted universal-action-mounted contact brush is of metal-graphite and varies to fit current and resistance. It rides upon a large flat surface and assures perfect contact without wear on the wire. Pressure at the contact and at the center lead are independent. Ohmite Rheostat Models H, J, G, K, L, P, and N, all marked Series A, are listed under the Underwriters' Laboratories Reexamination Service.

RATING: The current carrying capacities shown in the tables are for use in **free air;** when units are enclosed, these currents should be reduced possibly as much as 30% to 50%, depending upon the degree of ventilation. The rated current will cause the rheostat to dissipate its rated wattage when the full resistance is in the circuit.

MODEL C, MINIATURE — 7.5 Watts* (See Bul. 203)

The Model C provides greater design flexibility. In addition to its small size, its versatile solder terminals will also plug into common transistor sockets or circuit boards. It is stocked with both standard and locking type bushings.

REON RESISTORS/POTENTIOMETERS

Reon manufactures a complete line of wirewound resistors to Mil-R-93C

MULTI-TURN TRIMMING POTENTIOMETERS WIREWOUND

High Temperature—175°C
Humidity Proof—Mil
Wirewound—5% Tol.
Meets Mil-R-27208B

Model 101/ Style RT10

Model 201/ Style RT11

Model 301/ Style RT12

FEATURES

- ★ High power dissipation: 1 watt at 70°C
- ★ Operating temperature range: −65°C to +175°C
- ★ Moisture proof per MIL-STD—202C Method 106
- ★ GROUP Weld technique joins terminals directly to several turns of the resistance coil for High reliable terminations.
- ★ One piece molded housing:
  - ★ Provides a direct contact heat sink for the resistance coil, eliminating hot spots.
  - ★ Bonds each coil of the resistance element in place.
  - ★ Seals out moisture, eliminating external sealing problems.
- ★ Matched materials assure minimum stress on resistance wire and minimum temperature coefficient.
- ★ One piece self-locking contact wiper assures maximum reliability and setting stability when exposed to vibration, shock and acceleration.
- ★ Unique length and diameter of the resistance element permits the use of more turns of larger diameter resistance wire resulting in a more rugged assembly, and exceptional resolution.

RESISTANCE NETWORKS

- ★ Ladder
- ★ Fast rise time
- ★ Close temperature coefficient match (1 PPM)
- ★ Custom made to your specifications

SAMARIUS HAS THE ANSWER

IF YOUR PROBLEM IN POTENTIOMETERS IS LITTLE OR BIG—DELICATE OR RUGGED—ACCURATE OR PRECISE—SINGLE OR MULTIPLE—THIN OR THICK—MINIATURE OR MONSTER—LIGHT OR HEAVY—SAMARIUS HAS THE ANSWER FOR YOU.

Our complete line of precision potentiometers start from Series C-050—½" micro miniature to Series HP-500—5" high resolution and linearity accurate potentiometers.

HIGH PRECISION POTENTIOMETER WINDINGS

Samarius, Inc. furnish their clients with a custom winding service for wire wound potentiometer elements in card and mandrel types. Linear or functional requirements are acheived through cooperative R & D with customers. Card profiles are ground with exact duplication from master templates on our own engineered and built machines to tolerances to meet all specifications. We can supply card windings for ¼" miniature potentiometers to cards 12 feet long and 4 inches wide. Mandrel windings are available up to 16 feet long in any type of wire needed. Over 30 years' experience in supplying high precision potentiometer windings to the field. Call on our engineering staff for their help in solving your winding or potentiometer problems.

THE INDUSTRY'S FINEST PRECISION POTENTIOMETERS

For more than fifteen years, Spectrol has been a leader in the design and manufacture of precision potentiometers, both linear and non-linear, standard and special designs. All Spectrol single-turn, three-turn, five-turn, and ten-turn precision potentiometers meet or exceed applicable military and commercial specifications for rotational load life, temperature range, shock, vibration, humidity, and salt spray; and Spectrol is the only manufacturer who produces every Mil-Approved precision potentiometer qualified to MIL-R-12934.

HIGH-QUALITY COMPETITIVELY PRICED TRIMMERS

For more than ten years, Spectrol has been engaged in the design and manufacture of high quality trimming potentiometers. Spectrol's complete lines of both cermet and wirewound trimmers are available in all the primary configurations—rectangulars, squares, and rounds—in both low-cost industrial and Mil-Approved versions, and Spectrol trimmers are stocked in depth at more than 75 distributor locations throughout the United States and Canada.

ATTRACTIVE PRECISION-MADE MULTIDIALS

Spectrol's line of handsome, precision-made Multidials includes both vernier and digital types. These turns-counting dials, for use on multi-turn potentiometers and other rotating devices, are not only superior in appearance but also in sturdy design, "feel," and precise operation.

VERSATILE ROTARY SELECTOR SWITCHES

Spectrol's versatile Model 87 Rotary Selector Switch brings a new dimension of flexibility to discrete component circuitry. Available in volume quantities at production line prices, these handy switches can be mounted directly on to printed circuit boards or panel mounted. They can be used in many ways... often to make other components do multiple duty.

CONDUCTIVE PLASTIC, CERMET, AND WIREWOUND CAPABILITY

At Spectrol, there is a tradition of personalized engineering service to assist the customer in selecting standards or developing "specials" that will fit his design best. This tradition is backed by an unusual in-depth capability that is dedicated to the design and production of wirewound, cermet, and conductive plastic potentiometers, trimmers, and related components.

TRW PRECISION RECTANGULAR METAL GLAZE TRIMMERS

ELECTRONICS GROUP

TRW has a Circuitrim potentiometer for every application.

TRW offers all 4 popular styles: rectangular, square, round and cube in both MIL and economy packages. Circuitrim potentiometers are also available in a large assortment of mounting styles.

The following pages graphically portrays TRW's complete line.

	1¼" RECTANGULAR	1¼" RECTANGULAR	DUAL IN-LINE "IC" PACKAGE

	Meets the difficult Char. C performance of MIL-R-22097. Bushing mount version available. 20% tolerance reduces costs.	The most stable Infinite Resolution trimmer available. Typical ΔR after Load Life test of 0.8%, far surpassing Char. C performance.	Infinite Resolution timmer in a Dual In-Line package. Eases P.C. board layout.

TECHNO MINIATURE WIREWOUND

Backed by a vigorous and extensive program of reliability testing, Techno wirewound trimming potentiometers have earned a reputation for quality and performance unmatched in the industry. Complete Quality Assurance facilities, including a fully equipped and MIL-approved test and environmental laboratory, guarantee the consistently superior performance of every Techno trimmer.

Techno's unique design incorporates a limited number of internal parts into a two-half plastic case that permits 100% final inspection prior to sealing. The design provides maximum flexibility and a uniform standard of excellence for a wide variety of military and industrial applications.

Throughout the electronics industry, designers and engineers have learned to trust Techno when precision trimming potentiometers are needed.

TRIMMING POTENTIOMETERS

Established Reliability — Style RTR24

Techno provides 100% screening in accordance with MIL-R-39015 for ⅜" square trimming potentiometers in P, W and X styles. Consult factory for details.

SIZE (Inches)	POWER RATING (watts)	TEMPERATURE RANGE (°C)
.375 x .375 x .150	1 @ 50°C	−65 to 175
.375 x .375 x .218	1 @ 50°C	−65 to 175

NOTES:

1. Tolerance: ±5%. Closer tolerances available.
2. Terminal legend: L = stranded insulated leads. P = printed wiring pins, base mounted. W = printed wiring pins, edge mounted 180° from adjustment shaft. X = printed wiring pins edge mounted 90° from adjustment shaft. SH = solder hooks.
3. All models with clutch stop rotation.
4. Standoffs to facilitate printed wiring board washing.
5. Available with Teflon insulated 5-inch leads as Model 11S.
6. Available with Teflon insulated 5-inch leads as Model 13S.
7. Available with .030" printed wiring board standoffs as Model 16S.
8. Resistance value per section.

AB AMERICAN BEAUTY

SOLDERING IRONS AND ACCESSORIES

Specify voltage, wattage and other options on each order. If your plug needs differ from standard (plug cap on 2-wire cord, NEMA-type plug on 3-wire cord) specify plug manufacturer's name and catalog number.

For complete catalog of AB soldering equipment, ask for Catalog No. 230CP.

LITTLE DANDY

The economy-priced miniature iron that stands up to production line conditions. Steel cored heating element with non-ceramic insulator. Molded handle, aerated finger grip (impervious to oil, perspiration). Balanced, non-roll design. Plug type tips.

Cat. No.	Wattage Std.	Wattage Spec.	Tip Dia.	Shpg. Wt.	Net
3108	20	25/30	1/8"	1/2 lb.	$5.15
3110	25	30/35	3/16"	1/2 lb.	5.15
3112	40	50/60	1/4"	1/2 lb.	6.90

NOTES: Three wattage options each model (3108: 20, 25, 30. 3110: 25, 30, 35. 3112: 40, 50, 60.) For 3-wire cord with NEMA plug, add "S3" to catalog number and $0.70 to price.

BANTAMS

Small irons of traditional American Beauty quality in a wide range of inputs and tip diameters.

Cat. No.	Wattage	Tip Dia.	Shpg. Wt.	Net
3114	60	1/4"	1 lb.	$8.80
3118	30	1/8"	3/4 lb.	7.00
3118-X	50	1/8"	3/4 lb.	8.00
3118-XP	50	1/8"	3/4 lb.	8.00
3118-SC	30	1/8"	3/4 lb.	7.00
3118-SCP	30	1/8"	3/4 lb.	7.00
3120	30	3/16"	3/4 lb.	7.10
3120-X	50	3/16"	3/4 lb.	8.00
3120-XP	50	3/16"	3/4 lb.	8.00
3120-SC	30	3/16"	3/4 lb.	7.10
3120-SCP	30	3/16"	3/4 lb.	7.10

NOTES: In above catalog numbers, "X" means "extra heat for continuous duty only"; "SC" means "short casing"; "P" means "pencil type handle". For 3-wire cord with NEMA plug, add "S3" to catalog number and $1.40 to price.

B-SERIES IRONS

Best miniature at any price. Advanced design. Precise balance, floating element for fast heat recovery. *Boxed with 3 assorted tips.

Cat. No.	Wattage	Tip Point Diameter	Shpg. Wt.	Net
B-2000L	22.5	*	1/2 lb.	$11.35
B-2500-L	30	*	1/2 lb.	11.35

NOTES: *1 each 1/8" chisel, 1/16" chisel, 1/8" cone. For 3-wire cord with NEMA plug, add "S3" to catalog number and $0.70 to price.

STANDARD IRONS

Production lines around the world use hundreds of thousands of these proven American Beauties.

Cat. No.	Wattage Std.	Wattage Spec.	Tip Dia.	Shpg. Wt.	Net
3125	60	75	1/4"	1 lb.	$ 8.80
3128	60	75	1/4"	1 lb.	8.00
3138	100	130/150	3/8"	2 lbs.	11.35
3138-X	175	—	3/8"	2 lbs.	12.75
3138-Y	100	130/150	1/4"	2 lbs.	11.35
3138-XY	175	—	1/4"	2 lbs.	8.00
3158	200	—	5/8"	3 lbs.	14.00
3158-X	250	300	5/8"	3 lbs.	15.40
3178	300	—	7/8"	4 lbs.	18.45
3178-X	300	400	7/8"	4 lbs.	19.75
3198	550	675	1 1/8"	5 3/4 lbs.	22.85

NOTES: "X" in catalog number means "extra hot, for continuous duty only." For 3-wire cord with NEMA plug, add "S3" to catalog number and $1.40 to price.

GENERAL PURPOSE SOLDER POTS

Crucibles of cast iron, chemically stable to keep solder pure. Center tapped for dross skimmer or extra fixturing. Wide lipped for extra fixture mounting. Shallow; 1 1/2" deep. Heat solder to 400° in 15 minutes — 750° in 25 minutes. Adjustable, direct reading thermostat.

Cat. No.	Solder Capacity	Shpg. Wt.	Net
300	1 lb.	6 1/2 lbs.	$33.35
301	(Same as NO. 300, with dross skimmer)	6 1/2 lbs.	36.60
600	2 1/2 lbs.	9 lbs.	35.10
601	(Same as NO. 600, with dross skimmer)	9 lbs.	38.30

NOTES: Standard cords are 2-wire SJO; for 3-wire cord, add "S3" to catalog number and $1.40 to price.

V-3000 SYSTEM

New type system dependably dials and maintains any tip temperature from 350° to 750°. High reserve for fast recovery. Iron is 40-watt, uses any 3/16" plug type tip.

Cat. No.	Wattage	Shpg. Wt.	Net
V-3000	Variable	5 lbs.	$47.00

TRANSFORMER TYPE IRONS

Use these American Beauties where isolation from line voltage is necessary. Heating elements in tips for quick tip heat changes. T-6 has variable heat dial. T-12 and T-30, non-variable.

Cat. No.	Wattage Std.	Wattage Spec.	Tip Dia.	Shpg. Wt.	Net
T-6	Variable		9/64"	1 1/2 lbs.	$25.50
T-12E/W T-1216	17	20	1/16"	1 1/2 lbs.	17.00
T-30E/W T-3016	30	25	1/16"	2 lbs.	19.15

INFINITELY VARIABLE POWER CONTROL UNIT

Dials and accurately controls soldering iron tip heat. (Also reliably controls small motor speeds.) Wattage: zero to 125W; infinitely variable, stepless. Fused. Pilot lighted.

Cat. No.	Shpg. Wt.	Net
477	3 3/4 lbs.	$25.50

AMERICAN ELECTRICAL HEATER COMPANY 6110 Cass Avenue, Detroit, Michigan 48202

AB AMERICAN BEAUTY

SOLDERING IRONS AND ACCESSORIES

SAFETY SOLDERING IRON STAND

Gravity controlled. Opens, closes automatically. Operator doesn't look up from work. Accommodates all miniature irons.

Cat. No.	Descrip.	Shpg. Wt.	Net
575	Soldering Stand	1 lb.	$3.35

ONE-PASS TIP CLEANERS

Cleans all sides of tip in one motion. Eliminates tip damage, linting, stray solder pellets. Rubberized base, bored for mounting.

Cat. No.	Descrip.	Shpg. Wt.	Net
480	Complete set	½ lb.	$2.50
480-S	Sponges only (ea.)	3 oz.	.16

TEMPERATURE REGULATING STANDS

Maintains soldering iron at preset temperature during idle and intermittent use. Minimizes warmup, prevents overheating, saves current. Pilot light. Adjustable to length of iron.

Cat. No.	Use	Shpg. Wt.	Net
475	For 100W-600W irons	3¼ lbs.	$11.35
476	For 30W-85W irons	3¼ lbs.	11.35

NOTES: For performated guard (as shown) add "SG" to catalog number and $1.40 to price. Standard cord is HPD; if you want either 2-wire or 3-wire SJO cord specify on order.

DRI-WICK

"The de-soldering tool on a spool"

Any place you can put solder in, you can take it out with Dri-Wick. Just lay Dri-Wick on joint and apply tip of soldering iron. Capillary action draws all solder out of joint, ready for salvage or re-work. Made of specially woven copper, each strand coated with water-white resin. Packed 5 ft. per spool, 25 spools per carton.

Cat. No.	For Solder Pad Size	Net (per spool) 1 to 24	Unbroken Cartons
484-1	.060" or smaller	$1.49	$1.19
484-2	.060" to .125"	1.49	1.19
484-3	.125" to .190"	1.49	1.19
484-4	.190" to .250"	1.69	1.35
484-6	.250" or larger	1.49	1.19

LITTLE DANDY DE-SOLDERING TOOL

Hollow tip surrounds connection, melts solder, vacuums work clean. Use on miniature or standard components in printed circuits and some conventional wiring. Tool combines new, simplified de-soldering attachment with Little Dandy (#3112) handle and heating element. Heats to working temperature in 2 minutes. Tips are replaceable. Plug-type insertion of attachment into heating element.

Cat. No.	Description	Shpg. Wt.	Net
490	Tool Complete	½ lb.	$13.25
495	De-soldering attachment only	½ lb.	6.90
497-60	Tip only w/ .060" aperture	¼ lb.(dz.)	.48
497-50	Tip only w/ .050" aperture	"	.48
497-40	Tip only w/ .040" aperture	"	.48
497-30	Tip only w/ .030" aperture	"	.48

NOTE: For 3-wire cord with NEMA plug, order "490-S3" and add $ to price.

PRICES SUBJECT TO CHANGE WITHOUT NOTICE.

RESISTANCE-TYPE SOLDERING & THERMAL WIRE STRIPPING EQUIPMENT

Complete, single source for newest equipment from simplest to most sophisticated

CIRCON microElectronics MicroTools • Hardware • Indicator Lights

MicroTools

70 tip configurations are precision forged, ground, and lapped onto 0.030″ diameter steel shafts. The unique features of the CIRCON MicroTool line are the micro-size of the working tips, the range of tip designs, and the perfectly balanced interchangeable MicroTool Handle. Tip designs include a MicroScale having divisions of 0.002″, a Tungsten MicroNeedle with a 0.00025″ radius point, and a MicroKnife sharpened to surgical standards. The entire area behind the Tip is 24 carat gold plated to insure corrosion resistance and freedom from contamination.

CIRCON has prepared the most popular MicroTool combinations in standard kits of 8 (KMT 3), 23 (KMT 2), and 67 (KMT 1) instruments. Each set is packaged in a custom, foam lined, hardwood case for maximum accessibility and protection.

MicroProbes

20 electrical MicroProbe tips are designed specifically for Microcircuit testing. Each gold plated MicroProbe is mated to a carefully balanced insulated handle and light lead wire to yield optimum control and "feel." Among the tip designs is a Tungsten Probe having a 0.00025″ radius point. CIRCON MicroProbes may be selected with a 0°, 45°, or a 90° bend in the region of the Tip for maximum accessibility and visibility.

CIRCON offers MicroProbe sets for specific applications, such as the 5 unit Thin Film Kit (KMT 16TF), and the 20 unit Quality Control Kit (KMT 16QC).

MicroSoldering

CIRCON offers the smallest and most precise manual MicroSoldering instrument on the market. The six special purpose MicroSoldering tips are machined onto high strength 0.015″ diameter wire which does not require tinning. The light weight, pencil type Handle permits accurate work on the smallest elements in difficult areas. The Controller regulates tip temperature from 200° to 1800° F. by dial setting, while the heat pulse duration is foot switch controlled. In conjunction with CIRCON'S gold plated Solder Balls, the Pulse Dot MicroSoldering System allows precise control of solder, flux, rise time, temperature, and total heat input.

MicroElectronic Hardware

(Delivery from stock. Minimum order 100 units)

Eyelets—Miniature Rolled, Flat, and Funnel type electronic eyelets. Every eyelet a precision product with absolute uniformity from part to part. Shot Burnished—Gold Plated eyelets meeting **NASA** and **MIL** Specs are stocked; cadmium, tin, silver, and solder plated upon order. Lengths from 1/64″ to 7/16″ in 1/32″ increments. The Circuit Designers Eyelet Kit (EK-1) is a valuable aid for design and production work.

Eyelet Setting Tools—Superior quality tools designed to provide flexible inexpensive tooling for precision setting of CIRCON eyelets. May be used in automatic or manual press equipment or simple vise-held tools.

Rivets & Terminal Lugs—For instrument, electronic and printed circuit applications involving space requirements smaller than normal subminiature hardware permits. Sizes from 1/16″ x 1/32″ and up in 1/32″ increments. Shot-burnished and 24 carat gold-plated.

Screws—Precision instrument screws of stainless steel or brass plated with gold, nickel, and cadmium. Instrument head (oval modified fillister) or flat head (82°). Sizes from #000 to #4—Lengths from ⅛″ and up in 1/16″ increments. Taps are available for all screw sizes.

Nuts—Nickel, gold, and cadium plated brass instrument nuts in sizes from #000 to #4. Precision manufactured to **NASA** and **MIL** specs.

Washers—Split Lock, Insulating, and Flat instrument washers in sizes #000 to #4. Precision manufactured to be smooth, clean and free from burrs. Suitable for use in vigorous environment, at all frequencies.

Miniature Indicator Lights

DirectVue

OmniVue

Two unique lines offering unparalleled flexibility for the Panel Designer. CIRCON'S MicroMiniature indicators are 0.25″ diameter and may be mounted in densities of 14 per square inch.

The ⅜″ diameter SubMiniature Indicators may be combined into more than 1500 possible configurations due to interchangeable components. Each Subminiature Indicator may incorporate any of: 5 lens types; neon or incandescent bulbs; 16 to 1 range in brightness; insulated or grounded mounting; 2 standard bases; and 7 colors. Of special interest are CIRCON's Pola-Lens variable intensity indicator, and the BugEye 3-D plastic lens available in standard shapes or on a low volume custom basis.

The Panel Designer's Kit (MIK-3) containing CIRCON'S complete line is a valuable aid in design and prototype work. Hundreds of configurations possible at an $25 introductory price.

BRAZING ALLOY REFERENCE CHART

Engelhard Silver Products is ready to supply your brazing needs. Refer your brazing problems for our recommendations, to Engelhard Silver Products directly, or to your local Silvaloy distributor. Silvaloy brazing alloys are available in wire, sheet, powder, rings and washers. Precious metal brazing alloys are supplied under our trade name Engaloy. Silvaloy compositions include all commercially important silver base alloys and many special purpose compositions. If other compositions are required they can be supplied on special request.

We recommend Ultra Flux or Black Flux with Silvaloy Brazing Alloys

Ask for "A Complete Guide to Successful Silver Brazing . . . ."

Engelhard Industries, one of the world's largest precious metal concerns, is particularly well equipped to manufacture Silvaloy and Engaloy brazing products. The facilities provide for refining, melting, fabricating all forms of precious metals.

THE WORLD'S MOST PRACTICAL AND UNIQUE LINE OF SOLDER HANDLING TOOLS

EDSYN'S Soldering, Desoldering and Resoldering product line offers customers the widest range of solderability. Soldapullt desoldering tools vacuum up solder swiftly and efficiently. ERSA Soldering tools offer fast soldering cycles. Our Soldavac desoldering tool is a new model featuring both good performance and low cost. EDSYN'S Soldasip Resoldering Tip is our first of a continuing venture into the field of soldering. The Soldasip Resoldering Tip was designed with the capability to both apply solder or sip it up. It also has incorporated in its design a temperature adjust range from high to medium to low. Soldasip Resoldering Tip sells for the same price as an Ersadur replacement tip. With all these added features, your cost does not increase — only your solderability. To help acquaint you and increase your solderability, EDSYN is offering an experimenter's solderability kit. TRY IT! on a 30-Day Free Trial. Order X-34.

SOLDERING IRONS

Irons up to 1250 watts are available

PENLINE-120 SOLDERING IRONS — 120 VOLTS; 25, 30, 40 AND 45 WATTS

Lowest cost GE iron; ideally suited for light to medium production in electronics, communications, and allied industries, for repair and maintenance operations, and by the "do-it-yourself" electronics kit builder.

Description	Cat. No.
Handle and Cordset	
Two-conductor*	6D400
Three-conductor, with NEMA standard plug	6D400G2
Heater Assemblies for Threaded Tips	
25W, 6D415; 30W, 6D414; 40W, 6D413*	

Description		Cat. No.
Tip and Heater Assemblies-Ironclad		
1/8" Chisel Tip	30 watts	6D410*
5/32" Chisel Tip	30 watts	6D411*
5/32" Chisel Tip	45 watts	6D412*

Use interchangeable threaded tips.

* U.L. listed.

INTERCHANGEABLE THREADED TIPS

For Penline-120, Pistol-Grip, Midget, and Lightweight Heater Assemblies

LIGHTWEIGHT SOLDERING IRONS — 120 VOLTS; 40 AND 60 WATTS

Ideal for light and medium production-line soldering and maintenance and repair operations in electronics and communications industries. Tip and heater assemblies can be changed in seconds.

* U.L. listed.

Complete Iron - Includes handle and 6-foot cordset, and 60-watt tip and heater assembly	
7/32" Ironclad Chisel Tip*	6A273
3/16" Ironclad Pyramid Tip*	6A283
3/16" Ironclad Chisel Tip	6A283G23
Handle and Cordset	
Two conductor	6A273G62
Three-conductor with NEMA standard plug	6A273G63

Tip and Heater Assemblies - 60 watts	
7/32" Ironclad Chisel Tip	6A300
3/16" Ironclad Pyramid Tip	6A301
3/16" Ironclad Chisel Tip	6A301G4
Heater Assemblies for Threaded Tips (Use Interchangeable Tips listed above)	
40 watts	6A304
60 watts	6A301G7

PISTOL-GRIP SOLDERING IRONS - 120V; 40, 60W

Maneuverable and comfortable, excellent for light to medium production.

Complete versatility with choice of three 60-watt tip and heater assemblies; or 40- and 60-watt heater assemblies with 20 different interchangeable ironclad or copper threaded tips.

Handle and cordset, three-wire with NEMA plug	6A303

Can be used with Lightweight tip and heater assemblies or with Lightweight heater assemblies and interchangeable tips.

MIGHTY MIDGET SOLDERING IRON - 12V; 100W

A lightweight iron with high heat capacity for heavy soldering where larger irons, up to 200 watts, prove unwieldly for rapid repetitive soldering.

Tip and Heater Assembly
1/2" Ironclad Chisel Tip — for 60 w, 6A211G54; 80 w, 6A211G50; 100 w, 6A211G33.

Handle and Cordset	
Two-conductor	6A210G61
Transformer - 115-volt primary	
Four Tap — for 55/70/85/100 watts	6A364G7

MIDGET SOLDERING IRONS — 6 VOLTS; 25 and 45 WATTS (Also tapped transformers)

A versatile iron for light production in electronics, and communication industries — handles like a pencil, weighs but 1¾ oz. Tip renewal is easy and fast — complete tip and heater assembly can be changed in a few seconds.

Handle and Cord Set			
For single-and 4-tap transformers	6A203	For transformer with 3-heat switch	6A203G2

Tip and Heater Assemblies - All ironclad tips		
5/32" Chisel Tip	25 watts	6A211
1/8" Cone Tip	25 watts	6A213
3/16" Pyramid Tip	25 watts	6A215
1/8" Chisel Tip	25 watts	6A217
3/16" Chisel Tip	45 watts	6A211G31

Heater Assembly for Threaded Tips (Use Interchangeable Tips)		
25 watts		6A221
Transformers - 115-volt Primary¶		
Single Tap	35 watts	6A362G2
Four Tap —for 26/29/32/35 watts		6A364G2
With Three-heat Switch† —18 to 35 watts		6A434

¶Single- and four-tap transformers are available with 240-volt primary in quantities of 36 or more.
†Suitable for use only with Handle and Cordset 6A203G2.

MINIATURE SOLDERING IRONS — 6 VOLTS; 12 VOLTS

Ideal for production line soldering of sub-miniature equipment, printed circuits, and instruments. Weighs only 1½ ounces. Integral transformer plugs into any standard 115-volt outlet, makes iron portable for maintenance work.

Complete Iron - Includes handle and 6-foot cordset, tip and heater assembly, and transformer		
1/8" Chisel Tip	3" Shank	6A428G3
1/8" Chisel Tip	6" Shank	6A428G4

GENERAL ELECTRIC

Soldering Irons and Tips from Hexacon

VOLTAGE RANGE: 6 to 240 • OPERATE IDENTICALLY ON A.C. OR D.C., ANY CYCLE
STANDARD VOLTAGES 110/120, 121/130, 220/240 • SPECIFY VOLTAGE ON ORDER

Equipped with flexible 5 and 6-ft. approved Neoprene rubber heater cord, which is water-proof, kink-free and resistant to oil, abrasion and heat. Nickel chromium replaceable heating elements, insulated with finest mica, protected by rugged outer housing. Replaceable tips.

HEXACON MINIRONS

WITH ALL THE EXTRA FEATURES

- Rugged quality construction that will withstand production line conditions
- Slim-line case promotes maximum visibility
- Long life and non-freezing Durotherm tips

SLIM LINE CASE — SLIM LINE HANDLE

UNITED TECHNICAL PUBLICATIONS

ERSIN

Multicore

5-core wire rosin solder
Available in 1-lb. and 7-lb. reels

This is no ordinary solder!

ONLY ERSIN MULTICORE 5-CORE SOLDER IS MADE THIS WAY

These illustrations show the construction of ERSIN Multicore 5-Core Solder. Multicore solder is made only from pure virgin metals (1) with 5 cores of exclusive extra-active, non-corrosive ERSIN Flux (2). Multicore's special manufacturing process locates the 5 cores of ERSIN Flux close to each other and at the perimeter, so that there is only an ultra-thin wall of solder between the cores of flux and the work (3). This unique core configuration (4) also keeps the flux near the heat source, to melt faster—wet the metal more effectively. This enables ERSIN Multicore solder to produce the consistently reliable joints for which it is known.

Conforms to Federal Specification QQ-S-571

EXCLUSIVE PACKAGING IN POLYSTYRENE AND SKIN-WRAP FOR UTMOST PROTECTION IN SHIPPING AND STORAGE

STANDARD TIN/LEAD ALLOYS AND GAUGES

Available from stock: 63/37; 60/40; 50/50; 40/60; Savbit; Special Alloys—H.M.P. (High Melting Point, 565° F.); L.M.P. (Low Melting Point, 354° F.). Other alloys upon request.

Gauges: 14 s.w.g. (.080") through 24 s.w.g. (.022"). NOTE: Soldering iron tips should always be 108° F. above melting point of alloy.

NEEDLE FINE GAUGES

For microminiaturization, integrated circuits and other similar requirements. Off-the-shelf delivery in alloys 63/37 and 60/40, in even gauges from 28 s.w.g. (.014") through 34 s.w.g. (.009").

COPPER LOADED SAVBIT ALLOY

Copper-loaded SAVBIT stops the wear and erosion of copper soldering iron tips...increases tip life by 1,000%.

Characteristics and specifications: Savbit Alloy is available in Ersin Multicore 5-core solder containing non-corrosive extra-fast Ersin Flux in 14, 16, 18, 20, 22 and 24 gauge. Melting point: Virtually the same as standard tin/lead alloys. Excellent conductivity, tensile and shear strength.

HIGH PURITY EXTRUDED BAR SOLDER

The same superior quality solder as in Multicore 5-Core Wire Rosin solder. Highest purity is achieved by advanced quality control, possible only with the Extrusion process. Extreme uniformity and smooth texture, without the cross-graining of cast bars. Virgin metals. Conforms to Federal Specification QQ-S-571d with respect to alloy composition in Sn60 (60/40), Sn63 (63/37), and Sn50 (50/50). Skin wrapped for distributors; bulk-packed for manufacturers. Also, low antimony "EXTRUSOL" Commercial Bar Solder—bulk packed.

ERSIN LIQUID FLUXES

Made to the high quality standards of Ersin Multicore. Three formulas. No. 5380 meets Military Specification MIL-F-14256C, Type A (Activated). No. 0360 meets Military Specification MIL-F-14256C, Type W (Non-activated). Other commercial liquid fluxes available such as: No. 4370 highly activated commercial flux. Foam, water soluble, protective coatings and cleaners upon request.

NEW SOLDERABILITY TEST MACHINE

A precision instrument to determine the solderability of component termination wires that operates on a principle entirely different from, and superior to, the immersion method—electronic digital timing. Accurate, positive, totally reliable, yet economical because no technician is needed to operate it, and tests are run with great rapidity. Developed in association with I.E.C. Built in England by Multicore Solders, Ltd. Complies with I.E.C. Publication 68-2 Test T. Descriptive literature available on request.

FREE evaluation test samples, "Modern Solders" technical booklet, and fully detailed information on any of these products will be sent promptly. Address request, on company letterhead, to: Multicore Sales Corp., Dept. RY399, Westbury, N.Y. 11590.

MULTICORE SALES CORP., WESTBURY, N.Y. 11590, Div. British Industries Co.

ORYX

PRECISION SOLDERING EQUIPMENT

WHY PRODUCTION MANAGERS CHOOSE ORYX SOLDERING IRONS

1. MINIATURE SIZE

ORYX soldering irons are small and easy to handle as pencils. Their miniature size helps to speed any precision soldering operation. Damage to adjacent components is eliminated. If you can see it, you can solder it with ORYX!

2. FEATHER WEIGHT

A standard, utility-type 100 watt soldering iron weighs about 2 lbs. The so-called pencil-type irons typically weigh between 2 and 6 ounces. ORYX soldering irons, by contrast, weigh as little as ¼ ounce. This true feather weight virtually eliminates hand fatigue. Workers can turn out many more joints per hour with fewer rejects.

3. HIGH EFFICIENCY

All ORYX soldering irons utilize a unique element-in-the-tip design principle. By generating the heat within the tip, far fewer watts are needed to achieve results comparable to much larger irons. This principle also provides quicker heat recovery because the heat path between element and joint is so very short. The need for large insulating handles is eliminated.

LOW-VOLTAGE SOLDERING IRONS

MODEL 5-S—(As shown in photograph). Eyepiece model less than 5" long, for precise finger control. Weighs 7 grams. Nominal temperature 575°F. Furnished with 1/16" S tip. Also takes T tip. 4.5-volts, 4.5-watts (Use 54204-T tapped transformer for 4.5 volts) .....Net **$5.95**

MODEL 6A—The most popular Oryx soldering iron. Designed for printed circuit soldering. Weighs only ¼ oz. Nominal temperature 690°F. Furnished with 3/32" removable B tip. Also takes other tips listed below. 6-volts, 6-watts. Net **$5.95**

MODEL 9-6—Similar to model 6A, but greater heat capacity. Weighs ¼ ounce. Nominal temperature 750°F. Furnished with 5/32" A tip. Also takes B tip. 6-volts, 8.3 watts **$5.95**

MODEL 11-6—Special model for high-temperature solders. Temperature 835°F. Weighs ¼ oz. Furnished with 3/32" solid nickel E tip. Nickel tip provides long life at high temperatures. 6-volts, 10-watts .....Net **$7.45**

REPLACEMENT TIPS for low-voltage soldering irons.

Type	Material	Plating	Diameter	For Model	Net Ea.
A	Copper alloy	Nickel	5/32"	9-6	$ .54
B	Copper alloy	Nickel	3/32"	6A, 9-6	.54
E	Solid Nickel	—	3/32"	11-6	1.80
P	Copper alloy	Nickel	1/16"	6A	.60
S	Copper alloy	Nickel	1/16" (short)	5-S	.60
T	Gold and copper	Nickel	1/25"	5-S, 6A	2.85
V-PL	Copper alloy	Iron	3/32"	6A, 9-6	1.80
X	Copper alloy	Nickel	1/25" (pointed)	6A	.90
X-PL	Copper alloy	Iron	1/25" (pointed)	6A, 9-6	1.85
Z	Copper alloy	Nickel	1/25"	6A	.85
Z-PL	Copper alloy	Iron	1/25"	6A	1.80

TRANSFORMER

for low-voltage soldering irons.

TAPPED TRANSFORMER—Output 4½ to 6-volts in ½ v. steps. For exact temperature control on all ORYX 6-volt tools. Operates on 115 V. AC—ready to plug in. Model 54204-T .....Net **$7.80** ea.

TELVAC

LABORATORY TOOLS / APPARATUS

VACUUM TWEEZER SYSTEM

This new parts-handling system positively and precisely lifts parts varying in size from microscopic to those weighing several ounces. Parts are handled without damage or contamination. Defects caused by pinching, scratching, or marring are eliminated. Critical surfaces are protected. Vacuum is turned on and off with forefinger. For 115 V. A.C. Complete system, ready to plug in.

Complete System K-150

Net ea.

$36.50

"IN-CIRCUIT" TRANSISTOR TESTER

A new test instrument for the circuit designer or test technician. Makes rapid "go-no go" evaluations of semiconductors while they are still in the circuit. Checks cut-off and conduction on PNP and NPN transistors and diodes without the need for costly unsoldering. To use, the operator sets the selector switch to NPN or PNP. He then presses the tester's sharp spring-loaded pins (arranged in TO-5 configuration) against the transistor's printed circuit connections. Open and shorted transistors are readily identified by noting the condition of the tester's pilot light. Diodes and unmounted transistors are similarly tested using a set of extending leads and clips. An optional 7-position diode adapter may be used to test diodes in the circuit. Furnished complete with extending leads and alkaline battery, ready to operate.

MODEL SC-4 TESTER .....Net **$74.50** ea.

MODEL 1330 DIODE ADAPTER .....Net **19.50** ea.

INSTRUMENT REPAIR KIT

A 35-piece kit of fine precision tools for the instrument shop or laboratory. Includes miniature soldering iron, taper-jaw diagonal cutter, needle-nose plier, precision screwdriver kit, tiny stub-nose scrissors, eye loupe, needle-file set, 11-piece knife set, hex wrench set, spline-key set, soldering aid set, and a precision Dumont-type tweezer.

MODEL K-50..... Net **$59.50**

NEEDLE FILES

Precision Swiss needle files with vinyl cushion finger grips

Set of 8 precision Telvac files in plastic case. No. 3 cut.

Cat. No. 2000 (4" styles) ..... Net **$6.95** ea.

Cat. No. 2100 (6¼" styles) ..... Net **8.95** ea.

WIRE STRIPPERS

Unique wire-stripping pliers. Just squeeze and pull! Models T-52 and T-56 require no operator adjustment. Use T-52 for #8 to #24 wires and T-56 for #18 to #28 wires. T-22 is set by operator to required wire size from #8 to #24. Tool steel heads have razor-sharp edges. All models have red vinyl cushion grips.

T-52 .....Net **$8.35** ea. **T-56** .....Net **$11.95** ea. **T-22** .....Net **$4.95** ea.

ORYX-TELVAC tools available from distributors everywhere. Ask for complete catalog.

WALL BRAND SOLDERING PRODUCTS

SINCE 1864

MADE IN USA

HOT AIR GUNS AND TIPS

HD Type and WH Type Heavy-duty Irons

Wallbrand heavy-duty irons are engineered for highest efficiency performance. Rugged construction assures long-life for demanding production line needs. No radionic interference. Triple-life resistance wire wound on pure mica and constant tip temperature with extra fast recovery permits continuous heavy-duty use. 120 volts AC or DC. Other voltages available on request. Handles remain cool after long hours of operation. Tips are easily changed. Special irons customized to particular requirements.

Model	Watt Input	Tip Dia.	Length W/O Tip	Thermo/ Gram Value
18HD	25	1/8"	6⅝"	300
14HD	40	1/4"	7½"	900
38WH	80	3/8"	10¼"	1500
12WH	125	1/2"	10¼"	2000
12-38WH	125	3/8"	10¼"	2000
12-38HC	155	3/8"	10¼"	3500
58WH	200	5/8"	12¼"	3500
58-12WH	200	3/8"	12¼"	3500
78WH	300	7/8"	12⅜"	5400
78-58WH	300	5/8"	12⅜"	5400

XLS Pencil Iron

One handle fits 9 elements

Lightweight pencil series features quick element interchangeability and highest performance. Cool, unbreakable blue polycarbonate handle takes heating elements from 11 to 75 watts. Each can be changed by line operator without special tools. Available with either 2 or 3 wire cord. Uses regular or iron plated tips. Elements encased in long-life stainless steel jackets.

DH (DUO HEAT) Pencil

Pat. Pending

Developed for use in intermittent soldering operations

Revolutionary lightweight pencil operates continuously at low heat, but has higher heat available when needed. Constant low heat is adequate for light to medium jobs, get high heat instantly by pressing handle switch; tip and element life infinitely increased. Indestructible molded handle stays cool and comfortable. Wide variety of plug-in tips easily interchangeable.

Model	Continuous Low Heat	High Heat
DH-1	15W 520°F	47W 920°F
DH-2	20W 630°F	53W 975°F

IDL INSTANT DEPENDABLE LASTING IRON

Pat. Pending

3 oz. pencil controlled by thermal time delay relay

Heats in seconds. No transformer. When handle button is depressed 180W element heats initially until soldering temperature is reached. Thermal time delay relay then cuts in 40W element automatically. Pencil cannot overheat. Interchangeable plug-in 1/8" tips need no special tools to change. Unbreakable handle stays cool. Especially good for diversified light to medium jobs.

Trig-R-Heat Gun

Feather light 14 oz. gun has no transformer. Reaches hard-to-get at spots easily. Tips will not deform. Heats and recovers instantly. Rugged, precision built. Tip and element assemblies changed easily.

Model	Tip Size	Max. Watts	Min. Watts	AC/DC Volts	Weight W/O Cord
214LT	1/4"	400	150	120	14 oz.
212LT	1/2"	500	300	120	24 oz.
TIP AND ELEMENT ASSEMBLY					
214TE	1/4"	400	150	120	6 oz.
212TE	1/2"	500	300	120	16 oz.

864 Commercial Duty Iron

Pencil iron has cool, molded plastic handle, balanced for comfort. Triple-life resistance wound. Copper tip maintains constant temperature.

Tip Size	Watts	Volts
3/16"	30	120
3/16"	40	120

Heavy-Duty Hatchet Irons

High reserve irons for more soldering connections, faster, in hard-to-reach areas. XLS models interchange elements 11W to 75W. Designed for continuous operation. Cool, comfortable, unbreakable handles. Variety of plug-in tips available.

Model	Tip Size	Watts	Volts
718XLS	1/8"	11-15-20-25	120
714XLS	1/4"	33-40-50-60-75	120
738WH	3/8"	80-100	120

(SIH not shown)

Soldering Pencil Holder

Can be mounted on top, in front or below bench. Adjusts to any angle. Bench model includes tip cleaning sponge and tray. SPH for up to 5/8" shaft. Model SIH for up to 1" shafts.

Desoldering Tool

Keeps solder in molten state in reservoir. Operated with one hand. Tip replaceable with two openings — .080" dia. and .064" dia. Fits 614, 14HD, 714XLS and XLS 33W to 75W series.

Tips and Tip Dispenser

Tip sizes from 1/8" through 7/8" in wide variety of configurations for specific industrial and commercial needs. Three grades — **Anniversary type:** Super finished, iron and chrome plated. **Wallklad:** Iron coated and chrome plated. For production and critical lab use. **Wallbrand:** Commercial, copper, nickel plated. Wall's own iron plating facilities produce high quality long-life tips. 1/8" through 3/8" iron plated or copper tips available in handy tip dispenser. Tips individually sealed in color-coded continuous belting, plastic envelope.

2AG and AG Heat Guns

Plug-in type hot air guns from 200 to 600 watts at 120 volts adaptable to usage requiring up to 1000°F. One heating element fits both models. Pistol grip available with trigger (extra cost), opens air and heat at same time. Five tip styles interchangeable. Special tips on request. 3-wire cord assembly. Guns include neoprene air hose, hose fittings, pressure regulator and gauge. Send for Bulletin HG-1265.

BOX 3349 KINSTON, N. C. 28501 TEL. 919/527-4186

Write Dept. EEM-70 for illustrated catalog I-669A

Industrial soldering irons and pencils are built to exceed Federal specification W-S-570. Wallbrand soldering products are UL and CSA listed.

Weller INDUSTRIAL SOLDERING TOOLS

A 1⅔ Ounce Pencil Iron that does the work of 15 to 100 watt irons...

and does it faster and better!

The new low voltage W-TCP Soldering Pencil automatically adjusts to every soldering job in the range usually covered by 15 watt to 100 watt irons. Operators can go from delicate component soldering to heavy ground lugs, and never switch irons! Weller's controlled energy reserve delivers the extra heat as it is needed.

Despite its phenomenal capacity range, the Weller W-TCP never overheats. A foolproof, magnetic control accurately senses tip temperature moment-by-moment, and regulates power input, virtually eliminating cold solder joints or excess heat.

The Weller Soldering Pencil and Power Unit are an unbeatable production team. Low voltage design means a more rugged heating element and much longer tip life. Premium plated tips are available in a wide range of shapes and temperatures.

Write or phone for the new Weller Catalog of production soldering equipment and name of your nearest Weller technical representative.

How Weller Temperature Sensing System Works

Magnet is attracted to ferromagnetic tip insert when iron is cold, holding switch contacts closed. As tip heats, approaching selected Curie point of insert, attraction is reduced causing magnet to retract and open switch. As tip cools slightly, magnet is again attracted to tip insert sensor, maintaining tip temperature within close limits.

Model W-TCP — Temperature controlled Low Voltage Soldering Pencil with 3/16" 700°F tip and power unit. Weight with tip, less power unit and cord, 1⅔ oz., overall length 7½". Supplied with burn-proof silicone rubber cord and 120 V., 50/60 cycle transformer with pencil holder and cleaning sponge. Secondary isolated for operator's protection. Tips available for 500°, 600°, 700°, 800° idling temperature.

Model TCP-1 — Soldering Pencil only, with silicone covered cord, 3/16" 700°F Tip. May be operated from any 24 volt power source.

Model PU-1 — Power Unit only, as described under W-TCP. 120 V., 50/60 cycles. (Also available for 230-250 V.)

WELLER OFFERS A COMPLETE LINE OF SOLDERING TOOLS FOR PRODUCTION, MAINTENANCE AND SERVICING.

with Energy Reserve and Temperature Control

9320

TEMPERATURE-CONTROLLED INDUSTRIAL SOLDERING TOOLS

. . . with Energy Reserve

MODEL W-60 Covers 15 Watt to 100 Watt spectrum with one tool. 60 Watts, 120 V., Wgt. 2½ ozs., 7¼" long. With 800°F. ⅛" screwdriver tip.

MODEL W-100 Covers 50 Watt to 150 Watt spectrum with one tool. 100 Watts, 120 V., Wgt. 3½ ozs., 8¼" long. With 800°F. ¼" screwdriver tip.

MODEL W-200 Covers 150 Watt to 300 Watt spectrum with one tool. 200 Watts, 120 V., Wgt. 10 ozs., 9½" long. With 800°F. 7/16" chisel tip.

These models can be supplied with 2-wire or 3-wire cords. (Weller "Temperature Sensing" tips are available in standard industrial configurations at 500°, 600°, 700° and 800°F. for the model W60; and in 600°, 700° and 800°F. for models W100, W200's).

SOLDERING TOOL STAND

Model PH-60—Stand will accommodate W-60 and W-100 tools, with interchangeable funnels. Includes tip cleaning sponge. Heavy cast base. Spring guard protects operator from contact with heated tip.

TEMPERATURE-CONTROLLED FIELD SERVICE TOOLS

. . . with Energy Reserve

We invite inquiries concerning your field service soldering equipment needs. We offer to develop soldering kits adapted to meet your special requirements.

TCP-12 12-14 volt operation PB-6 Self contained,
TCP-24 24-28 volt operation battery powered

Weller "Temperature Sensing" tips available in standard industrial configurations at 500°, 600°, 700° and 800°F.

WORLD FAMOUS *Weller* **DUAL-HEAT GUNS**

The original soldering gun. Available in three dual-heat models.

abbott 400 ∼ transformers

specifications

Input Primary
115V, 400 Hz ±20 Hz, 1 phase*

Regulation
10% no load to full load

Secondary Voltage Tolerance
Within 5% when measured at full load and 115 VAC input

Insulation Test
2500 VDC or 150% of secondary voltage (whichever is higher)

Construction
To MIL-T-27C, grade: 5, class: "S", life: "X" (10,000 hrs.) case: smaller (see drawing)

Environment
Encapsulated to meet MIL-E-5272C, including vibration to Proc. XII, temperature to 105°C, shock, sand, dust, humidity, saltspray, fungus, sunshine, rain, explosion, and altitude (to a vacuum)

Output Secondary
See voltage and current of specific models listed

features

- Hermetically sealed
- 105°C operation
- To meet MIL-T-27C
- Designed exclusively for 400 Hz
- For aerospace application
- Molded diallyl phthalate

abbott transistor LABORATORIES, INCORPORATED
5200 W. Jefferson Blvd. / Los Angeles 90016
(213) WEbster 6-8185 Cable: ABTLABS

abbott 60 ∼ transformers

features

- Quality MIL-spec 60 Hz power transformers
- Hermetically sealed
- to meet MIL-T-27C
- 105°C ambient operation
- 5 to 5000 volts
- 5 to 300 watts

DELIVERY IS FROM STOCK

specifications

INPUT PRIMARY: 115 VRMS, 60 Hz ±5 Hz, 1 phase

INSULATION TEST: 1750 VRMS or 150% of secondary voltage (whichever is higher)

CONSTRUCTION: To MIL-T-27C, grade: 4, class: "S", life: "X" (10,000 hrs.) case: (see drawing)

ENVIRONMENT: 105°C maximum ambient temperature. Encapsulated to meet MIL-E-5272C and MIL-E-5400K for vibration, shock, acceleration, sand, dust, humidity, salt spray, fungus, shunshine, rain, explosion and altitude (to a vacuum)

WORKING VOLTAGE: 1000 VAC for all transformers with secondary voltages up to and including 1200 VAC; 80% of rated secondary voltage for all others

SECONDARY VOLTAGE TOLERANCE: Within 3% of listed output voltage when measured at full load and 115 VAC input

OUTPUT SECONDARY: See voltage and current of specific models listed in the following pages.
